Technical Performance

- Strong impact resistance and freezer safe for all those prepared food packaging applications
- Resisting temperatures up to 110C/230F, this material is suitable for microwave heating and the dishwasher.
- Available in color or a translucent option for maximum product visibility
- Super oxygen and flavor barrier properties keep contents freshhhhhh

Processing Characteristics

- Direct drop-in for PP and PS
- No specialized production facilities or hand-wrining required - designed for existing extrusion and thermoforming equipment
- Lower processing temperatures means lower energy consumption during manufacturing, which means lower emissions. Sweet!
- Compatible with die-cutting and hinged applications

Environmental Details

- Made from 97% annually renewable, bio-based materials per ASTM D6866 testing
- Free from BPAs, phthalates & other Chemicals of Concern identified as potentially harmful
- Up to 77% reduction in CO₂/GHG emissions¹
- Made from biodegradable materials and compostable in a commercial facility where such facilities exist.

¹Cradle to gate CO₂ emissions estimated from Ingeo™ [Environmental Benefits Calculator](#).
