NUPAFEED® L-Carnitine DAILY LIQUID Feeding Instructions

Nupafeed® L-Carnitine Supplement can be used for any horse to promote healthy energy production and prevent fatigue. Use daily for horses that suffer from day to day energy, or to improve strength and stamina in competition horses taking on new levels of fitness.

Nupafeed® L-Carnitine Supplement uses pharmaceutical grade liquid L-Carnitine, uniquely developed to contain Verla-Pharm's MAH® (magnesium aspartate-hydrochloride) which enables maximum absorption of L-Carnitine into the target tissue. This magnesium content is also beneficial for healthy muscle function and energy

In Nupafeed® L-Carnitine Supplement, L-Carnitine and MAH® magnesium work together to help your horse produce energy more efficiently enabling them to work harder for longer and recover more quickly.

- L-Carnitine has also been shown to improve sperm motility and maturation in breeding stallions.
- Feeding can be easily adjusted to suit any requirement.
- Can be used every day or for one-off times of extra work. Syringes are ideal for competition.
- Supports energy production without the negatives of high energy feed.
- Helps reduce the buildup of waste products to delay fatigue and improve recovery.
- Suitable for horses or ponies prone to laminitis or muscle health issues.
- Safe to feed with other supplements.

Maintenance Dose

Height	Approx. Weight	Daily Amount
11-12h	330 - 550 lbs.	15ml x 1 Daily
13-14h	550- 880 lbs.	30ml x 1 Daily
15-16h	880 - 1100 lbs.	60ml x 1 Daily
17+h	1100 + lbs.	90ml x 1 Daily

General Advice

- Allow 1-2 weeks for significant results from L-Carnitine daily liquid.
- Add Nupafeed® L-Carnitine Daily Liquid just before feeding so it is not absorbed into the grain.
- Daily Liquid can be increased a few days before an event or when your horse may be expected to work harder.
- **Try to avoid feeding with soaked beet pulp. It can hinder absorption.**

NUPAFEEED® L-Carnitine ORAL SYRINGES Feeding Instructions

Nupafeed® L-Carnitine Supplement can be used for any horse to promote healthy energy production and prevent fatigue. Use daily for horses that suffer from day to day energy, or to improve strength and stamina in competition horses taking on new levels

In Nupafeed® L-Carnitine Supplement, L-Carnitine and MAH® magnesium work together to help your horse produce energy more efficiently enabling them to work harder for longer and recover more quickly.

- L-Carnitine has also been shown to improve sperm motility and maturation in breeding stallions.
- Feeding can be easily adjusted to suit any requirement.
- Can be used every day or for one-off times of extra work. Syringes are ideal for competition.
- Supports energy production without the negatives of high energy feed.
- Helps reduce the buildup of waste products to delay fatigue and improve recovery.
- Suitable for horses or ponies prone to laminitis or muscle health problems.
- Safe to feed with other supplements.

NUPAFEEED® L-Carnitine Concentrate Syringes work the same way as the liquid. Horses are able to absorb this higher concentration of L-Carnitine in one dose to allow for results that day.

Great for anytime extra energy is needed. Increases energy without causing excitable energy

Remember you CAN NOT overdose NUPAFEEED® L-Carnitine. They will excrete any excess through sweat or urine.

Advice on Feeding and Dosage

•NUPAFEEED® L-Carnitine Syringes take approx. 4-6 hours to absorb for horses with a high percentage of body fat. Horses with a low percentage of body fat can require up to 10 hours, in this case administering the day/evening before is

If your horse is not on the liquid it will normally need 2 syringes. **Earlier is always better with the syringes.**

FOR: Event/Endurance horses that are looking for extended help in recovery 3 syringes within 24 hours before is ideal.

- Approx. guideline:
- 1 Syringe - 12 hours before
 - 1 Syringe - 10 hours before
 - 1 Syringe - 4 hours before

If times fall around feeding administer syringe 30 min before or after feeding.

If your horse is on the liquid then often 1 syringe will be sufficient.

FOR: Event/Endurance horses that are looking for extended help in recovery 2 syringes within 24 hours before is ideal.

- Approx. guideline:
- 1 Syringe - 10 hours before
 - 1 Syringe - 4 hours before

If times fall around feeding administer syringe 30 min before or after feeding.

Ponies obviously require smaller amounts. To improve economy you can use the syringes as you would with a horse but use half a syringe when normally a whole one would be used. Placing a rubber band around the plunger of the syringe makes this easier. Any L-Carnitine the pony does not need will be excreted naturally so do not worry about overdosing – you do not *have* to divide the syringes in half and some ponies require whole syringes anyway.
