

Concrete Wax

Application
Instructions

CONCRETE LAB.
polished concrete materials

Concrete Lab Wax is used for the maintenance and protection of your concrete surface.

In a domestic setting we recommend weekly application in the first month, followed by monthly application.

In a commercial setting we recommend twice weekly application in the first month, followed by twice a month application.

Application Instructions

1. Apply wax to the surface of the concrete. Ensure good coverage.
2. Use the lint free cloth supplied to work the wax into the concrete.
3. After 15 minutes buff the wax to a sheen.

Don't worry if an excess layer of wax remains on the surface of the concrete as this will wear off in 24 hours.
