

PRESSRELEASE

Olympus DS-9500 simplifies professional dictation with enhanced clarity and flexibility.

The new Olympus DS-9500 joins a host of other new Olympus professional audio products including Olympus Dictation Management System (ODMS) Release 7 Software, Web SCP and AS-9000 Transcription Kit to improve workflow.

SYDNEY – 4 April 2018

Olympus Australia is pleased to introduce the DS-9500 Professional Dictation Recorder, a device to simplify your workflow and increase dictation management efficiency through advanced features including Wi-Fi technology, a superior Intelligent Dual Microphone System, structural durability and enhanced security. Joining the DS-9500 is the new Olympus Dictation Management System (ODMS) Release 7 software, the Web SCP license and device management program, and the AS-9000 Transcription Kit.

The Olympus DS-9500 professional dictation device's Wi-Fi connectivity allows you share your dictation from anywhere and send your dictation immediately to your transcriptionist without a USB cable, docking station or computer. The Intelligent Dual Microphone System controls the directionality of each microphone to actively monitor and analyse the phase difference while recording and suppressing noise from surroundings, enhancing the recorded voice. This keeps the focus on the person dictating and suppresses ambient noise in offices, hospitals, cars, airports and other noisy environments. For conference recording, the system controls the directionality of the two microphones into a 90° layout to accurately capture all presenters in conference rooms. A triple-layer, studio-quality pop filter ensures accurate voice capture while reducing unwanted sounds such as breath and wind vibrations, for superior accuracy that enhances workflow efficiency.

DS-9500 Feature Highlights

- Intelligent Dual Microphone System
- Wireless dictation workflow with Wi-Fi
- Slide switch for simple, intuitive operation
- Directional recording modes for Dictation and Conference recording
- Triple-layer pop filter blocks breath and wind vibrations
- Secure 256-bit AES encryption, data loss prevention and PIN code
- DS2 | DSS | PCM | MP3 Recording formats
- Large 2.4" colour display for easy viewing
- Docking station for fast charging
- Rugged, shockproof body: drop tested to 1.5m
- Integrated memory, SD/SDHC card slot
- Alcohol-wipe resistant body

The DS-9500's rugged 1.5 meter shockproof, alcohol-wipe resistant body is designed to be a strong, dependable workhorse in heavy use environments. A durable optical slide switch reduces risk of mechanical failure. Complete with reliable security features like 256-bit file encryption with DSS Pro audio codec and device pin lock, the DS-9500 provides trusted security to your most sensitive information and meets standards set by governments worldwide for securing data.

Olympus Dictation Management System Release 7 (ODMS R7) Software

Included with the DS-9500, the Olympus Dictation Management System Release 7 software (ODMS R7), is the virtual coordinator at the heart of the Olympus Dictation Solution. The ODMS R7 suite has been designed to provide an intuitive and user-friendly experience capable of handling new efficient workflows in a scalable solution that meets the needs of offices small and large.

The new Start-up Wizard provides quick and easy configuration through the setup of the Wi-Fi feature of the DS-9500 facilitating real-time dictation file sharing via network server, FTP or email, and quick set up of web-based e-mail clients such as Gmail and Microsoft Office 365. The flexible workflow of ODMS R7 allows automation in both on-site and off-site environments including file routing and workflow rules for efficient delivery within your business to predetermined destinations via network server, e-mail or FTP using either Wi-Fi, LAN or a USB connection. Transcribed documents are returned with ease to the original authors. Full compatibility with Nuance's Dragon® speech recognition software makes it possible to use background and real-time speech recognition, further decreasing transcription time.

The security features of the DS-9500 have been incorporated into ODMS R7 to ensure only authorised listeners can access shared information. Customisable backup features allow trusted storage of your files and protection against accidental data loss.

Web System Configuration Program (Web SCP) License & Device Management Program

Olympus' Web System Configuration Program (Web SCP) is designed for medium and large organisations; and contains all tools required to install, customise, and manage an ODMS environment in Workgroup mode. The Olympus Web SCP offers a vast array of features for network administrators to centrally manage and configure their ODMS environment and Olympus Hardware via a web browser on PC, further streamlining cumbersome user management processes, and making it easier to manage user and group profiles in larger numbers for faster, easier configuration.

ODMS workflow and device settings can be locked so that organisations can implement a standard workflow for their dictation environment, ensuring total consistency and accuracy. Web SCP allows administrators to easily update and deploy device firmware, track the use of ODMS Dictation and Transcription Module's across the workgroup, and update ODMS licensing keys, to add more users to an ODMS environment without affecting the existing system.

ODMS R7 / Web SCP Feature Highlights

- Automatic dictation import from DS Series
- Share dictations via shared folder, e-mail, or FTP
- Flexible, Automatic dictation routing workflow
- Creates wireless workflow with DS-9500
- Control playback of dictations via foot switch (TM Only)
- Seamless integration to speech recognition.
- New Start-up Wizard for quick installation and configuration
- Simple and intuitive user interface
- Supports web-based email such as Gmail and Office365
- Scalable solution for small and large offices
- Configure hardware and ODMS workflow centrally from a web browser (Web SCP)
- Licenses are centrally managed and can be updated easily (Web SCP)
- Software and firmware updates can be deployed to specific users or groups (Web SCP)
- Support for Citrix, Windows Terminal Services and VMware virtual platforms (Web SCP)

AS-9000 Transcription Kit

The AS-9000 Transcription Kit is the perfect companion for Olympus DS Series devices to provide a complete, end-to-end professional dictation system. Featuring a four-button control USB foot pedal, lightweight under-chin transcription headset and ODMS R7 Transcription Module software, the AS-9000 seamlessly integrates into the workflow of your office environment to significantly streamline data sharing and distribution of dictations between professionals, departments, and office locations.

A newly designed user interface provides easy setup and navigation that creates a customised business solution to meet your needs, while workflow prioritisation and communication help to effectively manage office deadlines. Included 256-bit AES encryption with DSS Pro format provides trusted security to your most sensitive information. The AS-9000 is able to play back your encrypted files from Olympus professional dictation devices, which cannot be done on third-party transcription programs.

Pricing, Colours & Availability

The Olympus DS-9500, AS-9000, ODMS R7 and Web SCP will be available from April 2018.

DS-9500:	RRP \$699 AUD / \$849 NZD
AS-9000:	RRP \$429 AUD / \$529 NZD
Web SCP License:	RRP \$599 AUD / \$729 NZD
