Automatic Cartridge
Capping Machine

Squish-o-Matic 1000

Cap entire trays of cartridges with the push of a button. The Squish-o-Matic 1000 is designed to work alongside our fully and semi-automatic cartridge-filling machines and eliminate the inefficiencies of capping cartridges by hand. Able to accommodate most press-fit mouthpieces, the Squish-o-Matic 1000 uses a hydraulic press to securely cap roughly 3000 cartridges per hour.

Product Features

Precise Hydraulic Press

Never worry about loose mouthpieces or punctured seals with the Squish-O-Matic's precise hydraulic press.

Easy to Use

Once configured and calibrated, simply place your tray of filled carts into the Squish-O-Matic, rest the mouthpieces in place, and press Squish. It's that easy.

Direct to Tray Capping

Save yourself from manually capping each cart individually. The Squish-O-Matic 1000 is designed to fit the foam trays that cartridges arrive in from the manufacturer, allowing you to transfer entire trays of filled carts directly onto the platform and cap them simultaneously.

Environmental Control

The Squish-O-Matic offers a fully enclosed environment, preserving the integrity of your filled carts as they gently cool and preventing any foreign contaminants from getting inside.

Every machine comes standard with our industry-leading customer support, consultation, warranty, training, and calibration assistance.

Important Note: While it will be extremely tempting to experiment squishing literally everything in sight, our warranty only extends to its use on vape cartridges.

Squish-o-Matic1000

Product Specifications	
Input Voltage	110VAC 60Hz
Power	800W
Working Pressure	7500kg
Control	Hydraulic
Size	650x500x1320mm
Weight	120kg
Operating Temp	10~40° C
Max Travel	45mm
Max Height	175mm
