The mean results of the five specimens is reported (rounded to nearest whole number)

^ An individual result both below the result classification and below the mean result minus 20% shall be considered of lower classification

Maximum Slope Design Value (when dry):	2 deg
Maximum Slope Design Value (when wet):	N/A

^NCC Code provides reference for ramps up to 1:8

TREATMENT OPTIONS

a result below recommendations, the following treatment options are available to increase slip resistance and Reduce Your Risk!

service, following is a short list of common types of treatments we see our clients using to prove the slip resistance of various pedestrian surface materials.

Cleaning procedures	Minimising detergent residue build up or other contaminants.
Acid etching	Increasing surface texture.
Coatings and sealers	Surface coatings and penetrative types.
Surface texture	Coatings, etchants, sandblasting, shot blasting, etc.
Surface replacement	May be the most cost effective option in some instances.

poring treatments' will identify surface treatment professionals in your local area. ISTS ber of detailed proposals when considering treatments, outlining expected slip resistance provements, visual changes, clean ability and life expectancy.
