LiftTruk

StockMaster Lift Truk is an Auto-Safe Manual Order Picking Platform Ladder

Stockmaster Lift Truk (Manual) is a safe and easy to use lifting platform ladder that cannot be accidentally left in the mobile mode. Items weighing up to 60 kg can be picked, lowered and transported in one action. The whole stock picking process can be safely handled by one person without the need for a second person to pass items up or down. Featuring a manually operated winch, maintenance costs are minimal, and there is no down time for battery charging. Items placed on the lift table can be lowered and moved similar to a fork lift, saving the time for transfer to a trolley, and reducing the need for trolleys.

The dangerous practice of carrying items up or down the ladder is eliminated creating a much safer product.

The dangerous practice of carrying large or heavy items up or down a ladder is eliminated, significantly reducing the risk of accident. Using a simple winding mechanism, the lift table can be positioned to the exact height required to safely transfer items from shelving, and braking of the load is automatic when the winch handle is released.

Lift Truk substantially reduces your exposure to the high cost of lost time injuries and compensation claims.

StockMaster LiftTruk Pro features a Safety Rail system that can be adjusted to suit your job, providing improved ergonomics and easy access for stock picking and with LiftTruk Pro you are protected against accidentally stepping off the front of the platform. Featuring the unique and fully automatic StockMaster Auto-Gate LiftTruk Pro frees your hands to carry an item and still maintain a safe grip as you enter or leave the workspace.

StockMaster LiftTruk Order Pickers . . .

- ✓ Reduce handling time
- ✓ Reduce your need for labour
