

HS1550CM² V2

The 1550 was our first HS wing and it has proven to be a total success and loved by riders all over the world. The V2 builds on that pedigree with good injection of performance and subtle refinements to its handling.

HS1550CM² V2

The aspect ratio has been increased, the thickness of the section decreased and the planform reworked for an all-round improved package!

Faster, smoother, more agile, better pump and progressive in pitch make it simply more exciting to ride. In keeping with the rest of our HS Foils, the V2 1550 has a huge range and is designed for maxing small wave potential. It's a wicked choice for SUP and winging because of the great range, power and glide for its size.

Dimensions:

Area : 1550 cm²

Wingspan: 938 mm

Weight: 1125g

*Comes complete with A+System screws, and protective cover.
