

CABLE PENDANT ASSEMBLY INSTRUCTIONS

We strongly recommend all lighting be assembled and installed by a licensed electrician.

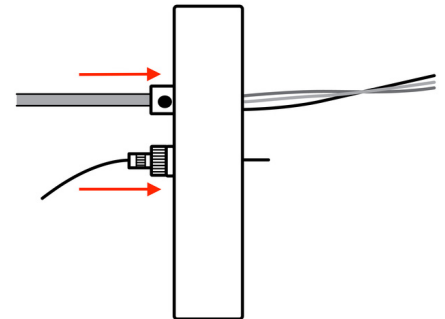

1. To shorten the length of the wire, slightly unscrew the set-screw on the canopy.

1.

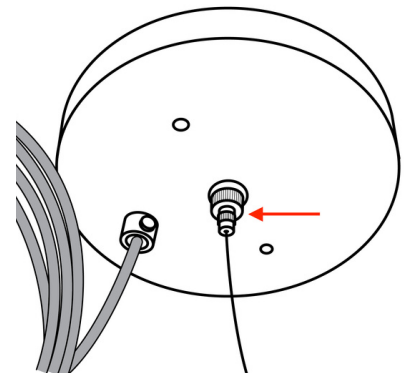

2. Shorten wire to desired length by traveling wire through canopy. When wire is at desired length, tighten set-screw. Cut excess wire from inside of ceiling canopy leaving approx. 8" of wire for connection.

2.

3. To shorten the suspension cable, slightly unscrew retaining nut on suspension cable connector. Travel cable through cable connector to desired length. Tighten retaining nut by hand. **Be sure fixture weight is supported by suspension cable NOT the electrical wire.** Cut excess cable from inside ceiling canopy using wire cutters.

3.

4. See additional instructions (on separate page) for fixture installation.
