# HAT COMPONENTS

**VISOR**

*A fabric-covered round piece attached to the front of the cap.*

---

Made to help shield the eyes from the sun, visors come in a wide range of shapes and curvatures to cater to a variety of headwear styles.

**CROWN**

*The distance from the bottom edge of the cap to the top of the head.*

---

This helps determine the depth of the cap. A smaller number means the cap will sit higher on the head while a larger number means the cap will sit lower.

**PANELS**

*Triangular pieces of fabric that are stitched together.*

---

These pieces come together to form the main rounded structure of the cap. Depending on the style, caps generally consists of 5 or 6 panels.

**CLOSURE**

*The back piece of the cap that determines fit and adjustability.*

---

There is a wide range of closure types such as snapbacks, buckles, and plastic hooks made to give our customers the perfect fit.

**PROFILE**

*The slope of the cap's crown.*

---

Low-profile caps tend to have crowns that are more angled while high profile caps have crowns that are more perpendicular to the visor.
