

About Us

OUR STORY

Excessive sweating is a problem that has a significant impact on people's lives and general wellbeing. One of Dermadry's co-founders knew that better than anyone, as he suffered from excessive sweating himself. During his adolescence, he noticed a lack of availability of effective and affordable treatment. He began feeling trapped by the medical condition known as hyperhidrosis.

After privately dealing with the condition for many years, he finally unveiled his "secret" to several of his closest friends. They offered their support and encouragement and made him realize that it was now his duty to not only to find a solution but also to make it accessible to all. What began as a simple search to find a solution for a personal problem quickly became a mission to change the lives of millions of people around the globe.

The solution needed to be affordable, efficient, and practical. After conducting extensive research, he concluded that iontophoresis was the treatment of

choice and had exceptional untapped potential. And so, Dermadry was founded.

With the help of experts in the fields of engineering and medicine, Dermadry developed an iontophoresis device with efficiency, ease of use, and safety in mind. They partnered with Novo Electronics to ensure that their device featured cutting-edge technology.

With support from the federal, provincial and municipal governments, what was once merely an idea soon became a reality, and Dermadry received its Medical Device License from Health Canada, and their ISO 13485 certification.

Since then, Dermadry has been proud to offer effective at-home treatment. Their intimate knowledge of the problem, as well as their complete control over their device, is what sets Dermadry apart. From product design and manufacturing to providing customer support, everything is done right from their headquarters in Montreal, Canada.

OUR MISSION

Dermadry aims to revolutionize the lives of those who suffer from excessive sweating by providing them with peace of mind. Our goal is to spread awareness and educate the public on hyperhidrosis and iontophoresis treatment. We have helped thousands around the world achieve the dryness they deserve, and we aim to help thousands more.
