

**Safe around children and pets**  
No dangerous spinning blades to hurt little fingers

Bladed fans are very dangerous because spinning blades can hurt pets and children. You see, small fingers of children and pets can easily get through the cages around conventional fans and ceiling fans are unprotected.

There are no exposed blades on the EdenPURE® Comfort Air so it is completely safe for pets and children to be around unlike dangerous bladed fans. Even if the EdenPURE® Comfort Air is knocked over by a pet or small child there is nothing that can hurt them.

**No blades to collect dust**  
Super easy to clean leading to less dust around the house

Bladed fans collect dust on the blades so every time you turn on a bladed fan, it blows dust all around your home. You and your family breathe in that harmful dust leading to poor health and causing you to have to dust more!

The EdenPURE® Comfort Air is super simple to clean because there are no exposed blades to collect dust. Just a quick wipe with a cloth and it's completely dust free! This means no dust will be circulated around your home, keeping you and your family healthy and reduces how much you have to dust your home leaving you with more free time.

## Comfort Air

A brief interview with the Director of Product Development for EdenPURE®, John Whitakre....

**Q. How can I save money with the EdenPURE® Comfort Air?**

A. Saving money and staying cool is easy with the EdenPURE® Comfort Air. You see, air conditioning is very expensive and by adding an EdenPURE® Comfort Air to your home you can reduce how much your air conditioner is on. This zone cooling can save you a lot of money on your cooling bills!

And if you don't have an air conditioner the EdenPURE® Comfort Air is an inexpensive option to keeping cool instead of window air conditioners that can cost up to \$500.00!

**Q. How does EdenPURE® reduce dusting and improve air quality compared to a bladed fan?**

A. Bladed fans collect dust on the blades so every time you turn on a bladed fan it blows dust all around your home that you and your family breathe in leading to poor health and causing you to have to dust more!

The EdenPURE® Comfort Air is super simple to clean because there are no exposed blades to collect dust. Just a quick wipe with a cloth and it's completely dust free! This means no dust will be circulated around your home keeping you and your family healthy and reduces how much you have to dust your home leaving you with more free time.

**Q. How safe is the EdenPURE® Comfort Air?**

A. There are no exposed blades on the EdenPURE® Comfort Air so it is completely safe for pets and children to be around unlike dangerous bladed fans. Even if the EdenPURE® Comfort Air is knocked over by a pet or small child there is nothing that can hurt them.

Bladed fans are very dangerous because spinning blades can hurt pets and children. You see, small fingers of children and pets can easily get through the cages around conventional fans and ceiling fans are unprotected.

**Q. How does EdenPURE® work?**

A. The advanced Vortex Air Flow Cooling Technology gives you a steady air flow for maximum cooling efficiency. Bladed fans chop air with the spinning blades giving you uneven air flow and uneven temperature control.

**Q. With the Comfort Air, is it easy to set the exact air flow you want?**

A. You can dial in the exact air flow speed you want with the EdenPURE® Comfort Air for the perfect temperature you want. Instead of only a few speed settings, EdenPURE® has a variable speed setting allowing for precise speed control of air flow up to an astonishing 14.76 feet per second!

You see, bladed fans are very difficult to get the proper speed and temperature you want. There is typically only high, medium, and low. If setting one is too high and setting two is too low then you can't get the correct air flow you want causing it to be too cold or too warm.

**Q. How adjustable is the EdenPURE® Comfort Air?**

A. Adjusting the angle of the air flow on the EdenPURE® Comfort Air is very easy. An easy pivoting joint lets you control the air flow for perfect cooling efficiency.

And for maximum air flow the EdenPURE® Comfort Air can be mounted on any wall with the included wall bracket. The quick release wall bracket lets you have the EdenPURE® mounted on the wall and then within seconds take it down and change the direction of air flow by placing it on a table or the ground so you get the perfect angle for maximum air flow.
