

QUICK START GUIDE

SET UP

1. Gently strip off the protective plastic film that is attached to the unit.
2. Activate the internal cleaning mechanism. Turn your SilentPURE Air™ upside down and right side up 6 times or more to allow the beads to slide along the internal wiring, removing stray particles.
3. Make sure the On/Off switch is OFF (O) and insert wall adaptor into outlet. Then, insert the DC plug into the jack at the bottom right of the machine.
4. Be sure both filters are inserted completely as they serve as the “feet” upon which SilentPURE Air™ stands.
5. Turn of the On/Off switch to ON (I). Your unit is in full operation if you see the blue ElectroDynamic Status Light illuminated.
6. Turn the switch to “1” for Silent Mode, “2” for White Noise and “3” for the Turbo Function.
7. If for some reason your unit does not turn on initially, turn the On/Off switch to OFF (O), wait 10 seconds and turn it to ON (I).

EdenPURE®
SilentPURE Air™

- 1 Blue Status Light
- 2 Three Selection Switch
- 3 Permanent Ozone Filter
- 4 DC Input Jack
- 5 ZEPA-1 Filter
- 6 ZEPA-2 Filter

GENERAL OPERATION

For maximum performance, place 12" from walls, computers, electronics or metal. Operating the unit closer than 12" from your body can cause a harmless static discharge, similar to touching a grounded surface after dragging your feet on a carpet.

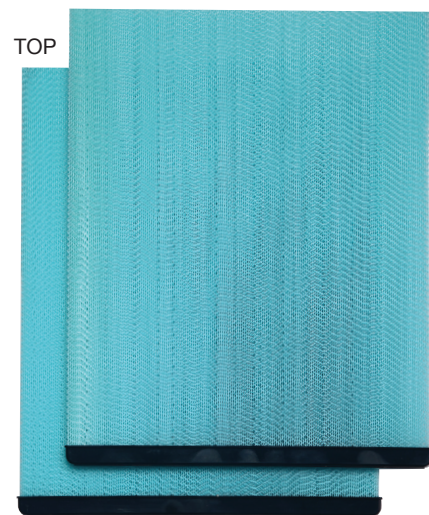

IMPORTANT NOTE

The Permanent Ozone Filter, just behind the Front Grill, is treated with a catalyst that converts ozone to oxygen and breaks down volatile organic compounds (VOC's). If a “new car smell” is present, you are smelling the catalyst and it will fade away.

SilentPURE Air™

2 SLIDE-IN
ZEPA FILTERS
(INSTALLED)

LOW VOLTAGE
ADAPTER
(ALL COUNTRY,
UL/CSA/CE LISTED)

ENJOY AND BREATHE WITH CONFIDENCE.
YOU NOW OWN THE WORLD'S FINEST QUIET/PURE/AIR MACHINE.
