STEP 4: HOW TO ADJUST STOP POINT

Adjusting the stop point will make the bottom rail stop in a certain height when gliding up the shade. This is a helpful feature for taller windows and making the bottom rail reachable.

To adjust: Use a flat screw driver and rotate it until you get the desired height for your stop point

STEP 4: HOW TO ADJUST TENSION

If you want to adjust the speed of your shade, you can adjust the tension on the left side of the shade by using a flat head screw driver.

To lift the shade faster: Rotate the screw driver “*clockwise*” until you find your desire speed.

To lift the shade slowly: Rotate the screw driver “*counter-clockwise*” until you find your desire speed.
