- ✓ 6 colours available to suit all skin tones
- ✓ The latest gel technology used to create a Brush On Builder Gel

Halo easi build

Materials Needed

- ✓ Sanitising Spray
- ✓ Cuticle Pusher
- ✓ Halo Prep & Scrub
- ✓ Lint Free Wipes
- ✓ Halo Elite 180 Grit Nail File
- ✓ Halo Elite Yellow Block
- ✓ Nail Tips or Nail Forms
- ✓ Halo Gel Polish Base & Top Coat
- ✓ Halo EasiBuild
- ✓ Pure Nails Cuticle Feed
- ✓ Halo Smart Lamp*

Preparation of the Natural Nail

- 1/ Sanitise your hands and your Clients hands.
- 2/ Remove any polish or gel polish.
- 3/ Push back the cuticles and remove any non-living tissue off the nail plate.
- 4/ File the natural nails with a 180 grit nail file.
- 5/ If using Tips, gently etch the natural nail vertically from cuticle to free edge to remove the shine using a 180 grit file.
- 6/ Remove dust and scrub the nail with Halo Prep & Scrub.
- 7/ Apply Nail Tips or Forms.

Application

- 1/ Apply Halo Base Coat, avoid flooding the cuticle area and nail walls - cure for 30 seconds LED*
- 2/ Apply a slick layer of EasiBuild to the nail following the Base Coat application. This will guide your building layer to the correct place on the nail bed. Do not cure this layer.
- 3/ Now apply a building layer directly on top of the slick layer. Concentrate on your apex and structure. If product flattens you can hold your hand upside down to help regain the shape. Cure for 30 seconds. Repeat Step 3 if you do not have required shape.

To avoid a heat spike hold the hand just slightly out of the light in front of the lamp for 10 seconds, this allows the gel to cure slowly. If using a lamp with a warm setting please follow lamp instructions.

- 4/ Using a lint free wipe, remove sticky layer with Gel Wipe.

Finishing

- 1/ File the nails with a 180 grit file to refine the shape, length and surface.
- 2/ Buff the nails with a Halo Elite White Block to smooth.
- 3/ Remove dust.
- 4/ Apply Halo Gel Polish Top Coat. Cure for 30 seconds. Allow time to cool before applying Pure Nails Cuticle Feed.
- 5/ Nails Cuticle Feed.

* Cure times are based on a 48w Halo Smart Lamp

**Cure times for a UV Lamp can be between 60-120 seconds (depending on strength of lamp and age of bulbs)

Removal

- 1/ Remove bulk with a 180 grit file until you almost hit the base coat.
- 2/ Place hands in a heated bowl of acetone for 10 minutes to remove excess EasiBuild and base coat.

Keeping the hands warm will speed up the removal process.

- 3/ If product fails to remove, buff the nail further and replace hand into acetone.
- 4/ Buff the nails with a Halo Elite Yellow Block and apply Pure Nails Cuticle Feed and massage in.
