# Halo poli build

How to create stronger, lighter and more flexible nail enhancements

- ✓ Strong and flexible
- ✓ Light, natural feel
- ✓ Easy to use – no mixing or ratios
- ✓ Ideal for sculpting with forms or nail tips
- ✓ 6 colours to suit all skin tones

*Step by step*

# Halo poli build

## Preparation of the Natural Nail

- 1/ Sanitise your hands and Clients hands.
- 2/ Remove any polish or gel polish.
- 3/ Push back the cuticles and remove any non-living tissue off the nail plate.
- 4/ File the natural nails with a **180 grit nail file**.
- 5/ Using a **180 grit nail file**, gently etch the nail to remove shine, then apply tips or forms.
- 6/ Remove dust with a **Halo Plush Brush** and dehydrate using **Halo Prep & Scrub**.

## Application

- 1/ Apply **Halo Rubber Base Coat** and cure for 30 seconds, remembering to remove any product flooding side walls or cuticle area first.
- 2/ Apply first bead of **PoliBuild** using your **PoliBuild Dual Tool**.
- 3/ Dip the brush end of the **PoliBuild Dual Tool** into the **Liquid Control**, wiping off excess. Your **PoliBuild Brush** should not be too wet; a small amount of **Liquid Control** will work.
- 4/ Pat and push your **PoliBuild** into position.
- 5/ Repeat steps 2, 3 and 4 until you have the required amount and shape.
- 6/ Cure under the **Halo Smart Lamp** for 30 seconds. It is not necessary to cure each ball individually.
- 7/ Using **Halo Prep & Scrub**, remove the tacky layer.

To avoid a heat spike while using **Halo Rubber Base Coat**, use the low heat setting on the **Halo Smart Lamp**, alternatively hold the hand just slightly out of the light in front of the lamp for 10 seconds. This allows the gel to cure slowly.

Cure times stated are based on a **48W Halo Smart Lamp**.

## Materials Needed

- ✓ Sanitising Spray
- ✓ Cuticle Pusher
- ✓ Halo Elite 150, 180 & 240 grit nail files
- ✓ Halo White and Halo Yellow Blocks
- ✓ Halo Prep & Scrub
- ✓ Lint Free Wipes
- ✓ Nail Tips or Nail Forms
- ✓ Halo Gel Polish Rubber Base Coat
- ✓ Halo Gel Polish Non Wipe Top Coat
- ✓ Halo PoliBuild Precision Gel
- ✓ Halo PoliBuild Liquid Control
- ✓ Halo PoliBuild Dual Tool
- ✓ Pure Nails Cuticle Feed
- ✓ Halo Smart Lamp

## Finishing

- 1/ File the nails with a **180 grit file** to refine the shape, length and surface.
- 2/ Buff the nails with a **Halo Elite White Block** to smooth.
- 3/ Remove dust.
- 4/ Apply **Halo Gel Polish Non Wipe Top Coat**.
- 5/ Cure for 30 seconds.
- 6/ Allow time to cool before applying **Pure Nails Cuticle Feed**.

**Bright White PoliBuild Precision Gel** is extremely pigmented, therefore when using this colour it must be applied thinly and then capped in with **Clear PoliBuild Precision Gel**. If you use the **Bright White** too thickly it will not cure in the middle and will cause issues when filing or premature loss of the enhancements.

## Removal

- 1/ Remove **Gel Polish Colour or Top Coat** and break the seal of the product with **150/150 file**.
- 2/ Using a soak off bowl, place hands in **Acetone**.
- 3/ Leave for 10 minutes and scrape off product.
- 4/ Repeat until all product is removed.
- 5/ Tidy up natural nails with a **Halo Elite Yellow Block** and **240 grit file**.
- 6/ Apply **Cuticle Feed**.

Place your soak off bowl in a bowl of warm water to gently heat the acetone - this will speed up the removal process.
