LCD VIDEO WALL

LCD VIDEO WALL

FD Series

FD Series

46'/47'/49'/55'

> FEATURES

. Industrial grade DID LCD panel

High brightness, high definition, anti-glare

Horizontal, vertical, special-shaped

Built-in intelligent temperature control fan

. High count point subtitle function

LOGO Customization of startup LOGO

. 180 whole perspective

自 Supports software dip switch function

*For details about supported models, see the specifications table

Industry Applications

Safety monitoring >

Video surveillance is widely used in many occasions because of its intuitionistic, accurate, timely and informative content. With the rapid development of computer, network, image processing and transmission technology, and the continuous development of video technology, the requirements of video display technology are becoming higher and higher. Most of the display equipment in the security monitoring industry works 24 hours a year. LCD Mosaic in the field of monitoring occupies a leading position in the field of security display with its outstanding color performance, high picture quality, low energy consumption, long life and other remarkable characteristics.

< Radio and television industry

The application of LIQUID crystal splicing in radio and television industry is more and more widely, and it is the general trend to change from analog circuit driven display system to all digital display system. LCD Mosaic large screen technology in the process of image display can fully realize digital processing, its stable performance; Excellent picture quality; High scalability, greatly improved radio and television field display system performance.

Food and beverage industry >

As the new center of world business, more and more international business activities are held, which brings great pressure to the transformation of catering industry to internationalization and informatization. Among them, diners, especially business guests, to represent the brand image, reflect the upgrade of the video equipment requirements are increasingly high, large screen, high definition products have become their favorite video terminals.

< Meeting splicing screen

Network meeting through the splicing of large screen display system for work report, can achieve text, sound, video, picture flexible display, fully mobilize participantsThe enthusiasm of the member's sensory perception greatly improved the effectiveness of the meeting. In addition the application of video conferencing makes more and more people begin to accept network video communication instead of face-to-face communication

KUANBO DIGITAL SIGNAGE

Product Features

- Industrial DID LCD screen, 4000:1 contrast; 10000K color temperature; Designed for video presentations
- Ultra-narrow bezel design, full HD, LED backlight, high stability, rich interfaces
- Industrial DID screen, can be placed horizontally or vertically
- Built-in OPS interface, easy for extension function
- Suit for KUANBO KB-FB2000 processor, support any angle irregular splicing, HIGH-DEFINITION 4K 8K video playback, infinite point-to-point stacking of picture base,
- Built-in random code generator can control the large screen splicing box to generate random code through RS232 communication port
- The splicing of the startup LOGO and no-signal LOGO enables you to configure the LOGO as required
- High definition big screen, the customer can set subtitle and it can be rolled on top of the screen

Industry Applications

Education industry ❯

Teaching touch all-in-one machine has the functions of teaching, academic report, conference, comprehensive discussion, demonstration and communication, remote teaching, remote marking, class, question setting, conference and so on. Touch function and intelligent management system and good audio and video effect; More can meet through the slide, projection film, multimedia courseware, video, material materials and other resources for comprehensive demonstration, discussion, live broadcast requirements, has a good visual effect, improve the strength and image of the school.

❮ Shopping mall navigation

Shopping mall navigation information management scheme is a leading media mode of using the Internet to release information. Combined with the demand for information release and service construction of shopping malls, it creates a new shopping service environment for shopping malls and pushes the new generation of professional information release form to a more advanced pattern. By installing multimedia display equipment in public areas such as mall entrance, lobby, elevator room and conference hall, it can realize not only shopping mall guide, advertising and promotion, but also play weather, scenic spots, traffic and other information.

Real estate industry ❯

Digital media marketing is under the new technical support system of media forms, such as digital magazine, digital newspapers, radio, SMS, mobile TV, web, desktop Windows, digital TV, digital movie, touch media, the sales, digital sand table, etc., this kind of media marketing with the help of simulation live such as sound, light, electricity, etc., Let the buyers in the visit can better experience the real estate project, enhance the interactive effect, so as to sell the effect.

❮ Banking application

Banks are the main channel for customer service and product sales. People put forward higher requirements for banking services, which also provides an application environment for the touch-control integrated machine to enter the business hall. Push and play new financial information and new banking business; The newspaper type advertising machine can realize the functions such as the joint delivery of electronic information advertising and DM direct leaflets, establish an efficient field management mechanism, and comprehensively improve the field user experience and efficiency.

Product Features

- Support the OSD menu
- Support touch to wake up the dormant PC
- Support remote control (computer) one button machine turn on/off
- Supports OPS pluggable computers for future maintenance and replacement.。
- Support Windows、 Android、 Linux、 MAC OS。 real Win7, Win8 free driver, no need to install program
- Reverse mirror: Wirelessly transmit TV images to mobile devices for display, And the use of mobile phones touch screen directly for multi-touch in the machine
- wireless image: Support for direct wireless transmission of the screen of iPhone, iPad, Android, MacBook and Windows computer to the machine, and support the reverse touch mobile device on the large screen at the same time, no need to connect to the touch control, VGA or HDMI cable.

KUANBO DIGITAL SIGNAGE

Industry Applications

The financial industry ❯

Bank online advertising function to help financial institutions to promote the brand and business. Users will use the system to broadcast financial information such as benchmark interest rates, show and introduce bank jobs business and activity announcements to customers, and broadcast corporate culture promotion videos. Advertising machine can also complete more system functions, such as queuing, touch screen, multimedia terminal, etc., to reach the consistent management of information, so as to bring considerable economic effects for the financial profession.

❮ The retail industry

Commercial advertising machine, can help users to publish the latest shopping guide, products and promotional information. The rich display function and bright color of the advertising machine can help enhance the shopping experience of consumers, together with help users to simplify the information dissemination process, ultimately improve the sales performance of retail professional users.

The hotel industry ❯

The network advertising machine can be displayed in the public area of the hotel to provide customers with a full range of service information. For example: hotel map, room use, cuisine recommendation, promotional activities and other information content. In addition, when there is demand, the Net can also open up related hotel operation support according to the hotel's original system, such as automatic registration and check number services.

❮ The health care industry

Network advertising machine, medical institutions can broadcast medicine, registration, hospitalization and other related information. In addition, the advertising machine system solution can also be used to make doctor-patient interaction, provide map guidance, entertainment information and other content services, not only to simplify the treatment process, but also to reduce the anxiety of patients.

Product Features

- Support real-time management and release on mobile, iPad and PC
- Support remote upgrade of advertising player software version and OTA upgrade
- Support the advertising machines in the same group can be played synchronously and the synchronization interval is less than 500ms
- Support the mobile phone to remotely set the properties of the advertising player, control the volume, rotation angle, time zone, turn off and turn on the advertising player
- Support remote monitoring of the network status, system status and hardware status of the advertising player, and monitor the content of the advertising player
- Support the needs of multiple forms of rolling subtitles and bullet screens, the font, size and content of subtitles and bullet screens can be edited
- Scheduling supports multiple priority levels, and supports shim/normal/interrupt/emergency message priority

Response Time	6.5mS
Viewing angle	178(H)/178(V)
Module function	cable,WIFI,8G SD card/3G 、4G optional
Color	black/silver Aluminium alloy frame
Operating system	Android 5.1
CPU	four core Cortex-A17 frequency 1.8G
DDR	2G
NAND FLASH	8G
WIFI	2.4G 802.11b/g/n
USB	USB2.0
Menu language	Chinese, English
Rated power	≤100W
Net weight	26KG
Product size	1010.8*599*82.3

Dimension

Product Features

- Support real-time management and release on mobile, iPad and PC
- Support remote upgrade of advertising player software version and OTA upgrade
- Support the advertising machines in the same group can be played synchronously and the synchronization interval is less than 500ms
- Support the mobile phone to remotely set the properties of the advertising player, control the volume, rotation angle, time zone, turn off and turn on the advertising player
- Support remote monitoring of the network status, system status and hardware status of the advertising player, and monitor the content of the advertising player
- Support the needs of multiple forms of rolling subtitles and bullet screens, the font, size and content of subtitles and bullet screens can be edited
- Scheduling supports multiple priority levels, and supports shim/normal/interrupt/emergency message priority

THE MONITOR

JP Series

KUANBO DIGITAL SIGNAGE

Commercial monitor display

JP Series

55'/65'/70'/86'/98'

> FEATURES

Industrial grade panel, support 7*24 hours of continuous work	Anti image shadow function
Intelligent switch	Built-in rotation
Intelligent temperature control system, double fan design	180 the whole perspective
The image is bright and low power consumption	Multilingual menu operating system

*For details about supported models, see the specifications table

KUANBO DIGITAL SIGNAGE

Industry Applications

Video monitoring >

Video surveillance is mainly concentrated in public places and high-risk industries, so there is a higher demand for video surveillance display. In the field of video surveillance, the commercial large screen, with its advantages such as ultra-high definition and ultra-brightness, can make the high-definition monitoring pictures captured by information collection equipment to get the best display, and can carry out automatic alarm or linkage control, providing the best display platform for high-definition monitoring. Fully meet the traffic command, bank monitoring, power dispatch, border monitoring, urban management, community security and other security applications.

< Bank securities

Commercial large-screen displays have also been widely used in the financial industry. Commercial large-screen displays have inherent advantages in the field of public information display by virtue of leading technology, environmental protection, appearance and application. Therefore, they are also favored by customers of financial institutions. With the development of China's financial industry, information technology has been widely used in China's financial field. Terminal display equipment, as an important part of financial informationization, involves a wide range and has a huge procurement scale. It also has particularly important requirements for green environmental protection, technical standards and product quality.

Traders super chain >

Commercial display with advanced display technology, through vivid and vivid pictures, in enhancing the brand or product fashion and sense of science and technology at the same time, tell the brand concept; Moreover, through personalized solutions and the ability to update the display content in time, it has been favored by retail brands and become one of the important means for many fashion brands to add consumer experience.

< Government forces

With the rapid improvement of the global military technology information level, a complete set of monitoring system and corresponding security monitoring equipment are used, together with a high-definition LCD display terminal, to identify the entry and exit of personnel, as well as check posts and sentries. Intelligent perimeter and image monitoring of the area, as well as important warehouse environmental monitoring including (temperature, humidity, smoke, combustible gas, water, infrared detection (illegal invasion), voice alarm) and other functions.
Product Features

- •Bilingual menu in Chinese and English, easy to operate, thin and light design, beautiful appearance
- •High contrast, high brightness, greatly improve the sense of texture, can better display details
- •It has the function of automatically removing residual shadow to protect the long-term use of liquid crystal
- •With the latest 3D digital decoding and image noise reduction technology, a variety of digital image correction circuit, image distortion minimum
- •I2C bus latest control circuit, image distortion minimum
- •Built-in power supply, low energy consumption, LCD screen service life can reach more than 60,000 hours
- •Ultra quiet cooling fan design, the whole machine life is longer
- •The front frame is all aluminum alloy, which has strong
- •electromagnetic shielding and no radiation

Product Parameters

Industry Applications

Brand chain store ⟩

Everywhere we can see the brand shop was put on a variety of liquid crystal bar screen, from the brand shop of LCD bar screen machine, and then the arrival of the goods on the shelf, the retail industry is more and more strong demand for advertising equipment, at the same time these advertising equipment by showing various types of commodity information, sales information and advertising information, guide the customer consumption and decision-making, efficient conversion for merchants, create considerable profits, Get more traffic. At the same time, it is deeply loved by the majority of merchants with its unique functions, and all major brand stores can use it to advocate product advertising or brand visual presentation.

⟨ Science and technology hall

The bar screen perfectly combines pictures, video, text and sound, and has high clarity, high brightness, bright colors, vivid images, simple and lively features. With its unique advantages, it has become a new force in the science and technology pavilion. At the same time, the technology exhibition hall can improve the image of the exhibition hall through the promotion video and picture text dynamic display; Direct visual display of product information, to meet the diversified consumption experience, circular display of exhibition hall product information; The digital scene relieves the pressure of the overall atmosphere and improves the quality of the science and technology pavilion.

Traders super chain⟩

Supermarket shelf area is very ideal for advertising and promotion, where the LCD bar screen can play its role; Can be used to display commodity advertising, promotional information and membership benefits; The use of bar advertising machine, not only can save the installation space, but also a full range of advertising; The bar screen has the characteristics of high definition and high brightness, which can provide very good display effect in the supermarket lighting environment. While shopping, customers can receive the latest product and service information at the same time, promoting the transaction.

⟨ The airport subway

Transportation industry, such as bus, subway, railway station, subway station and airport and other environments, display dynamic traffic and service information; A variety of installation options, such as lifting, wall mounting or embedded installation; Ultra wide full HD display, high brightness, full viewing Angle, stable and reliable; Display vehicle line and vehicle current position; Display bus number information, estimated arrival time and operation status and other convenient information; Can be integrated with the third party system.
Product Features

• Support the advertising machines in the same group can be played synchronously and the synchronization interval is less than 500ms

• Support the mobile phone to remotely set the properties of the advertising player, control the volume, rotation angle, time zone, turn off and turn on the advertising player

• Support real-time management and release on mobile, iPad and PC

• Support remote monitoring of the network status, system statusand hardware status of the advertising player, and monitor thecontent of the advertising player

• Support remote upgrade of advertising player software version and OTA upgrade

• Support the needs of multiple forms of rolling subtitles and bullet screens, the font, size and content of subtitles and bullet screens can be edited

• Scheduling supports multiple recurring modes, recurring by day/week/month

• It can support multiple media such as video/picture/marquee/subtitle/RSS/component/ppt/pdf

Customized Products
Industry Applications

Restaurant chain ﹀

Roots with + Internet, more and more traditional industries through Internet publishing system transfer the brand value, high-definition digital information publishing system that diners intuitive understanding of the food from material selection to cooking, and then to the whole process of the table, the joining together of diversified plastic, rich in playback mode, enough to attract the attention of customers and steps.

﹤ enterprise

Through the network unified management of the whole enterprise and even the whole building up to dozens of to hundreds of publishing terminals, one-click publishing, intelligent typesetting, advanced management and other functions to bring convenient operation experience, unified control of split-screen, single screen, LED screen, touch screen, bar screen and other display terminals, Widely used in enterprises and institutions, large state-owned enterprises, group companies and other corporate image display.

Shopping malls supermarkets ﹀

The tide of rapid development in digital, businesses use the venue of the existing resources, to join the ever-changing business display terminal, bring consumer technology feels dye-in-the-wood dynamic test, man-machine interactive mode, which can realize online shopping experience, facial recognition technology, can release its consumers by identifying facial orientation needed goods, increase the interactivity and entertaining, The distributed display system based on Internet is an essential high-tech display system for shopping malls.

﹤ Large conference hall

With the progress of science and technology, the large conference room of all large companies can undertake academic report, hd video playback, combined with customer demand, this system not only can support hd 4 k, 8 k hd video playback, you can also use mobile phones or the scroll, PPT material select, suspension of video playback, and other functions.

Network card	Intel dual ®i210-AT Ethernet controller
I/O expansion slot	1 x PCIE 3.0 x 16 slot
External device interface	x2 USB 3.0 / x2 USB 2.0 /x1 VGA / 1个Channeling mouth /1个R45 Gigabit network/x1 R45/
Power supply	1 200W Low noise AC power supply continues to supply power
Working temperature	10°C to 35°C
Working humidity	8%-90% · No condensation
Size	43 x 437 x 287 mm
Operating system	Windows 10 Pro/Linux

Engineering application case

Provide users with intuitive, vivid information, including the new season, clothing matching, discount products, news and so on, not only enhance the overall store image, create a new, eye-catching creative demonstration.

With real-time and clear display of flight information and train schedule, every passenger can choose to ride according to their own time in rush hour, to relieve congestion; Can display weather forecast and other convenient information, to the majority of passengers to bring more convenient.

The transportation

Show case

KUANBO splicing system with excellent definition, color, seam, weather resistance and other characteristics, in large museums, science and technology museum, auditorium, command center, real estate and other projects have been widely used.

Power grid management 4

In order to facilitate management, the network management center of communication operators can apply the spliced wall display system to provide comprehensive management and high-definition large-scale display for the operation of multiple networks, so that it has a highly intelligent control system that is easy to operate.

The entertainment 4

Kuanbo innovated from the structural components of products, combined with traditional office furniture structures such as tea tables, tables and display tables, and perfectly integrated the multi-touch interactive platform, which made a subversive change in its functional application.

The display screen above the kiosk of the outdoor advertising machine will be used to display bus arrival forecast information, including route forecast, location forecast and time forecast.

The bus station

It can display animation, video, 3D panorama, picture, music, text and other digital resources, and display all kinds of 3D real estate, real estate structure, real estate 3D map and other information through LCD Mosaic large screen in a vivid and dynamic way. It can give viewing information home buyers with a strong visual impact.

Real estate

The mall management 4

Mall operators can use the spliced wall display system to monitor and manage the mall in real time, such as the view of management personnel, anti-theft and loss prevention of on-site items, customer flow statistics, work efficiency, etc., are all major problems.

Smart banking

KUANBO touch display all-in-one machine has realized the direct and friendly interaction between customers and equipment. It can provide more than 90% of personal business such as inquiry, card registration, electronic banking, financial management, precious metals, etc. Through the intuitive screen of touch display equipment, simple operation and fast
