

Installing Flashing to Keep Cats From Accessing Trees

Required Components:

- Flashing or Trim Coil to layer a 36" tall band around your tree(s)
- Wood Blocks (for spacers) 2"x2" preferred
- Fasteners (Wood Screws or Nails)

1. Flashing/blocks should be 5 1/2 feet off the ground.
2. Fasten wood blocks to tree (prevents flashing from restricting tree growth)
3. Wrap flashing around tree. Overlap flashing several inches. Fasten flashing only to blocks, not itself to allow for future growth.

Flashing / Trim Coil available in many colors & finishes at home improvement stores.
