

Boat Access Mat

Mobi-Mat® Boat-Ramp™ is a patented roll out polyester mat, designed for creating boat launches and accommodating light and medium vehicle traffic on supporting but unstable grounds like sand and gravel on the shoreline or lakes.

Environmentally Friendly

Made of 100% polyester, Mobi-Mat® Boat-Ramp™ is delivered in rolls, easily dismantlable in case of modification of the shoreline and infrastructures and thus in compliance with environmental regulations.

Boat-Ramp™ prevents ground damage due to recurring vehicle traffic, and helps channel traffic along designated areas to protect sensitive areas.

Very Durable and Non-slip Corrugated Surface for Vehicles

Boat-Ramp™ withstands regular vehicle traffic. Also, Boat-Ramp™ is impervious to the damaging effects of salt water and is not affected by tidal change. It is recommended that Beach cleaning vehicles slow down and raise their rakes when driving over the mat.

On slippery terrain such as sandy beach, gravel or soft ground, the patented puncture resistant, corrugated surface of the Boat-Ramp™ provides great traction to wheeled vehicles.

Easy Installation and Dismantling and Low Maintenance

Boat-Ramp™ can easily be installed on the ground surface with minimal ground preparation. Boat-Ramp™ weighs 0.34 lbs/sqft. Only 2 people and 15 minutes time are required to install a 50' long roll. Boat-Ramp™ is attached to the ground with stakes inserted through eyelets.

Boat-Ramp™ requires little or no maintenance under normal conditions. The product can be swept with a broom or leaf blower.
