EMPLOYEE OWNED

## WASHING

- ✓ 40 degrees or less
- ✓ Wash inside out
- ✗ Do not use fabric conditioner

We recommend washing your garment on a gentle action 40 degree cycle (synthetics) with non-biological or colour care detergent. For lower environmental impact, Woodbank® sweats can also be washed at 30 degrees. To minimise pilling, wash inside out and with garments of similar fabric and weight.

**Do not use fabric conditioner.**

## DRYING

- ✓ Dry flat
- ✓ Cool tumble dry only
- ✓ Tumble dry inside out
- ✗ Do not tumble with abrasive or heavy fabrics

**We advise you to air dry your garment flat.** If tumble dried, use a cool tumble dry setting and ensure the garment is turned inside out. When tumble drying, do not mix with heavier weight or abrasive garments, as this will increase the risk of pilling. To avoid creasing, remove garments from the machine as soon as possible.

## IRONING

- ✓ Cool iron only

**If you iron your garment, use a cool iron setting.** Ironing on a high setting will scorch fibres and can result in pilling.

## PILLING

- ✓ Wash and tumble dry inside out
- ✗ Avoid excessive abrasion of your garment

If the fibres in your garment become entangled, they may form visible pills on the surface of the fabric. You can minimise the effects of pilling by avoiding friction and abrasion, rubbing (from bag straps or spot-cleaning) and snagging (from Velcro® or sharp edges). Remove pills with a de-fuzzing razor, a depilling comb or gently by hand.
