

Powerglide with Lift Off Technology
2763 9182 Series

Hard to Push

1. Auto Height Adjustment - no adjustment knob to turn.
2. Make sure the brush is turning. If it is not, the machine will be hard to push. If necessary, check brush not rotating.
3. If the consumer has a hose with variable suction control (on all machines **after** date code 13337) have the consumer open the suction control. This should resolve the hard to push.
