PC/NAS files

Internet Router
Connect via Wi-Fi or Ethernet

Passive Speakers

HDMI Cable

Ethernet Cable

2-Core Speaker Cable

2-Core Speaker Cable

Source to 2x RCA Cable

RCA to RCA Cable

The Sonos Amp is a stereo amplifier which is designed to power a single zone or room. A separate Sonos Amp is required for each zone to provide independent control.

Switchable zones from a single Sonos Amp can be achieved by wiring multiple speakers to a speaker switch, but this will only provide basic on/off control, and is not recommended for multi-room audio

Auxiliary Source

Connect an external analog source to play through the Sonos Amp. This source can also be streamed to any other Sonos speakers in your system

Wired Active Subwoofer

Adding a subwoofer (either wired or Sonos wireless) is a great way to boost the performance of a Sonos Amp and speaker system for both music and TV, increasing bass output and overall volume. Perfect for parties!
