SURGERY IS BETTER WITH SHARP BLADES

Dentanomic blades work well because they have a thin, sharp edge that cuts into the periodontal ligament space. Dentanomic blades are designed to operate within the periodontal ligament - this is very different than using a thicker edged or blunt instrument.

Our FREE online training demonstrates a more precise extraction technique using Dentanomic blades. The technique is faster, causes less bone trauma and protects the thin blade edges.

Product Catalog

Dentanomic Replaceable Blade Instruments

Our removable, replaceable blades have thinner, sharper edges than you may be used to, which makes surgery faster and easier. We will provide training for a more precise extraction technique to achieve the full benefit of the blades.

After completing the FREE Dentanomic online training (no purchase necessary), we offer full product support with a satisfaction guarantee.

Ergonomic handles are available in two sizes. They are weighted and shaped for comfort, precision and control. The ergonomic handles encourage safe palm grip, reducing the potential for slippage and trauma to the patient.

Surgical glove size < 7.5 = small handle

Surgical glove size > 7.5 = large handle

Dentanomic Replaceable Blade Instruments
