Aquiflo® Plus Wetting Agent

Aquiflo® Plus Wetting Agent is a unique formulation designed to move and distribute water uniformly through the soil profile. Applying Aquiflo® Plus Wetting Agent will aid water infiltration, while reducing localized dry spot formulation. Aquiflo® Plus Wetting Agent can also aid the movement of pesticides throughout the soil profile to enhance pesticide coverage. Aquiflo® Plus Wetting Agent is labeled for use in turf and ornamental sites.

APPLICATION RATE:

1 to 8 fluid ounces per 1,000 square feet

INGREDIENTS:

15% Alcohol Ethoxylates

15% Alkyl Aryl Sulfonate

83% Water

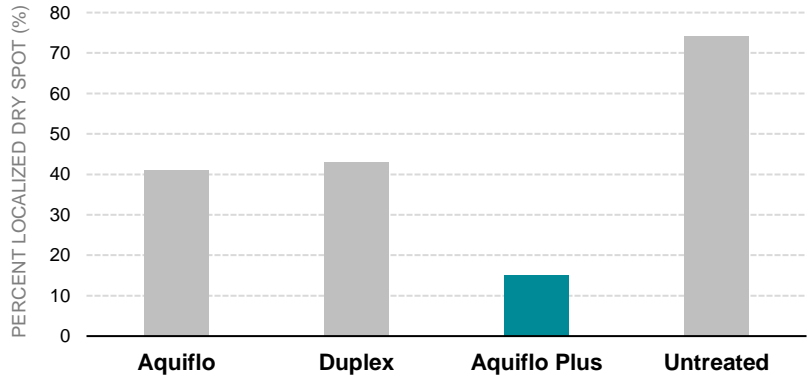

FEATURES & BENEFITS

- Improves water penetration in hydrophobic soils and through thatch layers
- Resists excessive water retention at the soil surface
- Can uniformly distribute pesticides in the soil profile

LOWER LOCALIZED DRY SPOT

Aquiflo® Plus had lower localized dry spot than the control and competitive products. Reduced localized dry spot leads to more efficient water use and better looking plants.

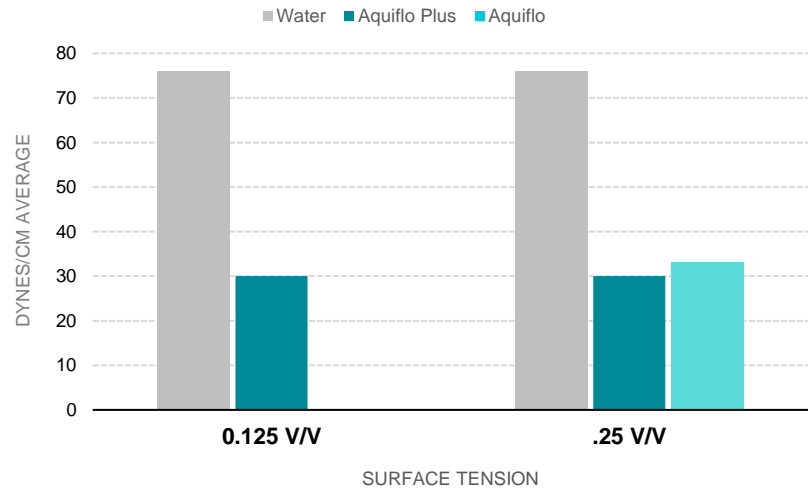

J. Young, 2014 Texas Tech University

GOOD PENETRANT

This dynes test shows the effect that the surfactant has on the surface tension of water at two standard dilution rates. This is an indicator of how a surfactant will penetrate through barriers such as thatch and move throughout tight soils. The lower the dynes /cm the more effective the surfactant is as a penetrant.
