WARNING!

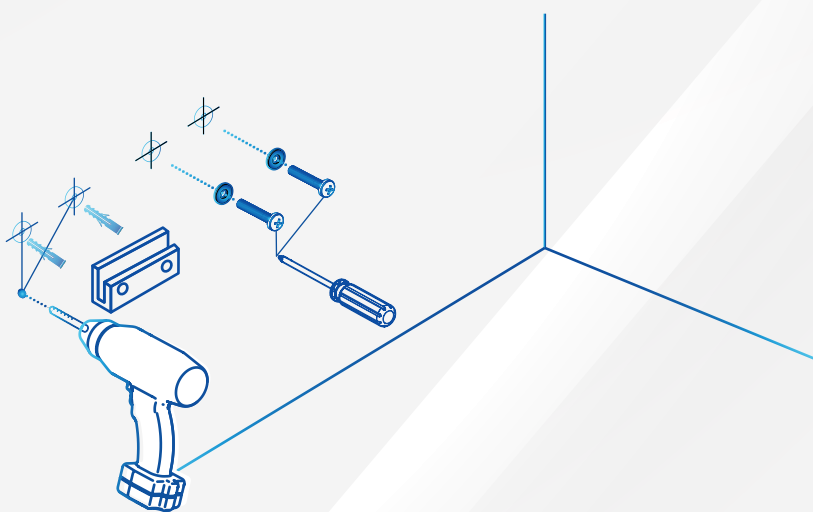

This product is fragile and can break, chip, or cause injury if handled recklessly. Please consult with a professional when installing.

Before installing, read entire instructions. Observe all local building and safety codes.

We recommend consulting a professional if you are unfamiliar with this type of installation. Streamline accepts no liability for any damages to the floor, walls, plumbing, or for personal injury during installation

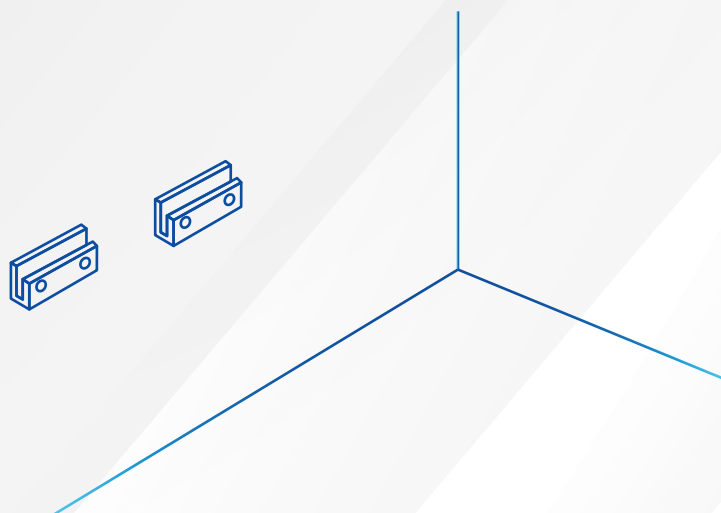

1

Using a pencil, mark holes on the wall where you would like to position the brackets. Please ensure that they are fixed on an even level.

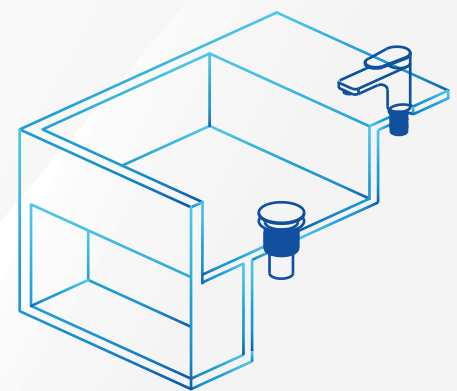

2

Drill holes where you have created the markings.

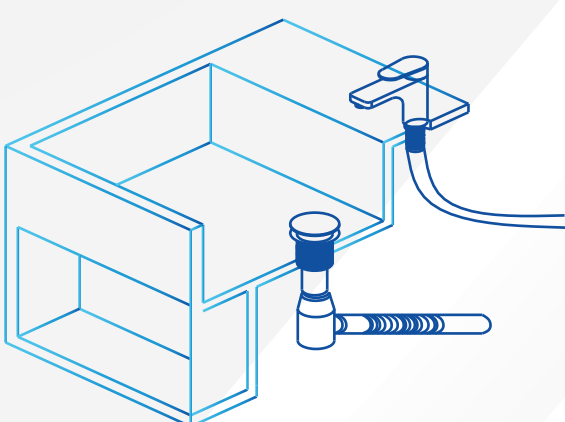

3

Using a screwdriver, fix the brackets onto the wall.

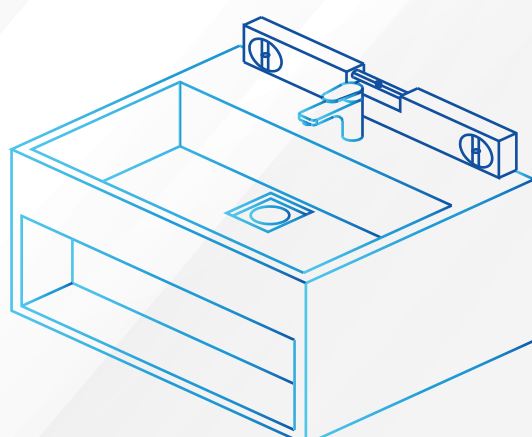

4

Assemble the faucet and drain on the basin and connect the faucet pipe and drain pipe to the valve as per the manufacturer's instructions.

5

Hang the basin on the wall, ensuring that it is affixed to the brackets and level.

6

Finally, apply silicone sealant in between the wall and the top of the basin in order to secure it.
