

RemoteLOCK™

RL 2000

The Ideal Smart Lock for Resorts and Rentals without Wi-Fi.

The RemoteLock RL 2000 is designed for properties without Wi-Fi connectivity. Schedule access for guests from anywhere without the lock needing to be connected to Wi-Fi. This algorithmic lock allows you to schedule access for each guest, providing each with unique credentials. Integrate with AirBnb, VRBO and more to schedule or automate guest access.

RemoteLock's EdgeState software lets you manage access from anywhere, receive alerts and notifications, and eliminates the hassle of key exchanges. This lock is weather resistant and can be used indoors or outdoors.
