

RemoteLOCK™

openEDGE CG

**BUILT FOR
COMMERCIAL USE**

The Ideal Smart Lock for Commercial Properties.

RemoteLock's OpenEdge series of smart locks can be remotely controlled and managed from the cloud. RemoteLock's industry-leading SaaS, EdgeState, integrates connected locks into a single point of control.

The **RemoteLock OpenEdge CG** is the perfect solution for large enterprises, commercial properties, and large office applications.

This commercial grade, Wi-Fi enabled smart lock allows robust access control and monitoring. Users can manage access from a smart phone or computer, as well as deliver temporary access codes for guest or support staff.

The OpenEdge CG works directly with on-premises Wi-Fi service and doesn't require a third-party gateway or controller.

The OpenEdge CG is perfect for many deployment scenarios, including:

Any commercial building, retail operation and vacation property management application, delivering control and the ability to monitor access.

RemoteLock EdgeState users can manage doors remotely, monitor lock usage, and even receive text or email alerts. Schedules and Lock Groups can be created to provide users with the access they need, only when and where it is needed.

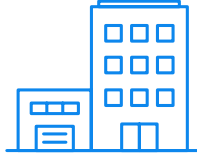

The OpenEdge CG can be integrated with all of RemoteLock's partner integrations to provide robust feature sets and streamlined booking options.

RemoteLock Wi-Fi technology has been embedded into the lock, making it unlike any other lock on the market. Manage one or thousands of connected smart locks from the EdgeState platform.

Ideal for many scenarios.
