Experience state-of-the-art technology with the Infinium ClearVue® video laryngoscope. A high-resolution display image and full view 2-megapixel blade camera offer first-time intubation success, reduces intubation time, and significantly decreases difficult airway intubation complications. An internal rechargeable lithium ion battery gives the ClearVue® over two hours of operating time. An automatic anti-fog feature, coupled with a compact and ergonomic design makes the ClearVue a cost effective, high quality option for emergency medicine and anesthesiology.
