

Adaptive Positioning Cradle Features:

Superior Performance

- Available with a stationary attachment point between the boom and cradle
- 360 degree cradle rotation for superior positioning, bringing staff closer to resident
- Compact, quiet actuator
- Utilizes a self-contained control and power supply
- Separate battery and charger
- Hand pendant integrated into the cradle's handle
- 500 lb. Safe Working Load

Adaptive Positioning Cradle Benefits:

- Allows caregiver to remain close to the resident during the repositioning process
- Manual repositioning of the patient is greatly reduced
- The potential for repositioning injuries to the caregiver is also reduced
- Compact size and quiet operation is not intimidating to the patient
- Cradle can be field-retrofitted with no special tools in less than five minutes giving the facility the flexibility of adding the cradle after the initial purchase of the lift

Integrated Weigh Scale:

- Integrated scale for Stature lift does not reduce the lifting height of the lift
- Low profile scale for Presence lift provides sleek design and weighing convenience
- Two sided display and controls allows the caregiver to operate and read the scale from either side of the lift
- The "Recall" function automatically stores the last measurement taken
- Unit of measure can be changed from pounds to kilograms with the push of a button
- Powered by a standard 9V battery that is easily replaced
