

## **MOBILIFT EXTENDED BRIDGE RAMP OPTION**

One of the most amazing features of the Mobilift is its ability to reach across stairs using the **Extended Bridge Ramp** option. This feature allows users to access levels where the staircase is the only method of entry. Without this option, users often have to resort to removing walls or railings in order to deploy a standard vertical platform lift (VPL). The **Extended Bridge Ramp** option is a great way to provide temporary wheelchair access at low cost. For a demonstration please see the “**Extended Bridge Ramp Option video**” on our website at: [www.adaptivelifts.com/cx.html](http://www.adaptivelifts.com/cx.html).

The Mobilift CX with Extended Bridge Ramp showing the Integrated Folding Handrails

### **AVAILABLE EXTENDED BRIDGE RAMP LENGTHS**

<b>Bridge Ramp Length</b>	<b>Horizontal Length of Stair Accessible (6" less than ramp)</b>	<b>Handrail</b>
10" (0.25m)	4" (0.10m)	Available upon request
20" (standard; 0.51m)	14" (0.36m)	Available upon request
33" (0.84m)	27" (0.69m)	Available upon request
46" (1.17m)	40" (1.02m)	Integrated Folding Handrails
56" (1.42m)	50" (1.27m)	Integrated Folding Handrails
66" (1.68m)	60" (1.52m)	Integrated Folding Handrails

For safety, the Mobilift bridge ramp should overlap the upper landing by at least 6" (0.15m).
