Remember to CHECK AVAILABILITY SHEET. Indicate alternate breed in case requested breed(s) sold out.

READY-TO-LAY PULLETS (18 to 20 weeks old)

SMALL ORDER CHARGES:
Add \$8.00 for orders less than 10 of any one age group

NOTE: You must provide your own containers

“READY-TO-LAY” refers to pullets that are at the maturing stage (age and weight), and will usually start laying within 2 to 4 weeks if proper management and environmental conditions are adhered to.

READY-TO-LAY PULLETS		PULLETS				COCKERELS (Limited availability)	
		2-19	20-49	50-99	100		
RTL-RSL Red Sex-Link (best egg layer)		11.20	10.70	10.20	9.95	10.20	
RTL-BR Barred Rock *	}	Minimum quantity 6 total of all breeds combined	13.20	12.70	12.20	11.95	12.20
RTL-CRX Columbian Rock X *							
RTL-BSL Black Sex-Link *							
RTL-RX Red X *							

* Please note that these breeds mature several weeks slower than the Red Sex-Link and they will not produce as many eggs, even in proper conditions.

All RTL are beak treated at day old to help prevent picking and egg breakage. Beak treatment still allows the hens to “scratch” feed or range. Pullets will have been on 12 hours of light per day when you receive them. Increase ½ to 1 hour per week (in the morning) until you reach 16 hours of light per day. Total hours of light per day and proper nutrition (no scratch or “green scraps”) will bring the pullets into lay. Greens and scratch may be given at a later age, however, if birds have access to these feed sources we recommend a vitamin supplement in the water to prevent a nutritional deficiency. As well, if you plan to allow your pullets access to the outdoors, consider putting a “wormer” medication in the water (1 or 2 application days – available from your feed supplier).

New and used crates are available for purchase. **WE DO NOT RENT OR LEND CRATES.** Green crates are an exclusive colour to Frey’s Hatchery and are NOT SOLD under any circumstances. Frey’s Hatchery cannot allow any of our crates to be used for any other purpose than our Ready-to-Lay deliveries.

Proper Handling Procedures to Prevent Contamination:

Please be aware that all poultry, even chicks, are livestock and should be treated as such. Proper handling procedures will reduce or eliminate the chance of bacterial contamination. A human hand can have hundreds of species and millions of individual bacteria on it, as can poultry. **Wash your hands with soap and water after handling poultry or any equipment that comes in contact with poultry.**

Frey’s Guarantee:

We guarantee 100% live arrival of the quantity ordered. Extras may be included in your order. Orders are accepted subject to conditions incidental to the hatchery business. Our responsibility for loss or damage arising out of incorrect shipment of breeds, sex or numbers, delay or failure of shipment or any other cause is limited to the original price paid. Frey’s Hatchery Ltd. operates under Federal and Provincial government regulations in regards to the operation of a licensed hatchery, animal husbandry practices, and disease control standards. It is understood and agreed that no representation or warranty as to livability, production, freedom from disease, fitness for use, or otherwise, is made by Frey’s Hatchery Ltd.

Delivery:

Day-old poultry have nutrients from the egg, therefore, they DO NOT need food and water until you have them out of the box AND in the proper temperature and conditions. Started and Ready-to-Lay pullets should be picked up by customer as soon as possible after arrival at pick-up point so they can be fed and watered.

Proper Conditions:

The first weeks of life are extremely important for the health of your chicks. This time is critical for their immune system, organ and skeletal growth. Improper conditions such as temperature, litter, and air quality can stunt their proper growth and have irreversible effects. **Use a HI/LO thermometer at the level of the chicks. Have 3-4 inches of litter/bedding –** this holds the heat from the infrared heat lamps (lamps DO NOT heat the air in your pen).
