

FUTURE HARVEST NUTRIENTS

Product Data Sheet

BUD START (POWDER)

DILUTION RATE:

Mix 1 gram of Bud Start to each 10 litres of your nutrient solution.

GUARANTEED ANALYSIS:

Available Phosphate (P₂O₅) 39%
Soluble Potash (K₂O) 25%

Derived from: Monopotassium Phosphate.

GROWTH STAGE:

Early flowering. For use during weeks 2 and 3 of flowering.

FREQUENCY:

Apply during the second week of flowering and repeat for the third week.

FOR USE IN:

Soil
Coco
Hydroponics

Bud Start is an early flower enhancer that will deliver striking visible results! This phosphorous-potassium booster is extremely effective in promoting a vigorous onset to a bloom cycle. It will assist as a weight gain supplement, as well as speeding up flower set development.

When using Bud Start, the size and amount of new flower sites on a fruiting crop is increased which causes them to expand and elongate. This early P-K boost speeds up and promotes a stronger start to flowering and has a positive effect on crop finishing times.

KEY FEATURES

- Can be used on short or longer flowering crops. Use once on short crops and twice for longer crops
- Helps stabilize pH, assisting plants in taking up all the nutrients they require during the important early flowering phase.
- Will minimally increase EC values, unlike other P-K products. Full strength fertilizer can be used without the need for dilution.
- Works with any branded fertilizer and additive products.

SIZE	HEIGHT X WIDTH	WEIGHT
20 g	6.5 in x 4.0 in	0.1 lbs
100 g	6.5 in x 4.0 in	0.2 lbs
500 g	4.0 in x 3.5 in	1.1 lbs
1 Kg	7.3 in x 3.8 in	2.2 lbs
10 Kg	13.5 in x 10.0 in	24.3 lbs
