- 1) Always allow additional mixing time between each product, and maintain a pH between 5.8-6.3.
- 2) If vegging longer than 6 weeks, repeat Week 6 for additional weeks. If flowering longer than 8 weeks, repeat Week 8 for each additional week of flower.

- 3) For cuttings and clones, use half strength of Week 1 of Easy Grow Plus until rooted.
- 4) After every 3 applications of a nutrient solution, we recommend flushing the medium with pH adjusted water alone.

- 5) Use pH adjusted water to flush the medium during the last 3-5 days before harvest.
- 6) In the case of excessive tip burn or nutrient lock up, flush twice with pH adjusted water, then scale back measurements by 10-20%.
