- 96W (dimmable)
- 150W (magnetic, dimmable)

UCA Simple Plug in Assembly

Switch connector or touch
dimmer connector or
occupancy sensor

UCA Simple Hard wired Assembly

Frequently Asked Questions

- What is the maximum wattage on a series run?

32W

Helpful
Tips

When selecting a power supply, sum up the wattage of individual components in your run, add a buffer of 10% for voltage drops on the line to decide the maximum wattage you will need.

Frequently Asked Questions

- What accessory do you use to create 4 different runs on a single power supply?

Frequently Asked Questions

- How do you run bell wire behind a dry wall?

Frequently Asked Questions

- Will UCAs work in wet locations such as freezers?

NO

They are meant for dry, interior applications.

Frequently Asked Questions

- Is there a 12V DC option available?

YES (Special Order)

- Can you have a cable hard wired to the fixture?

YES (Special Order)

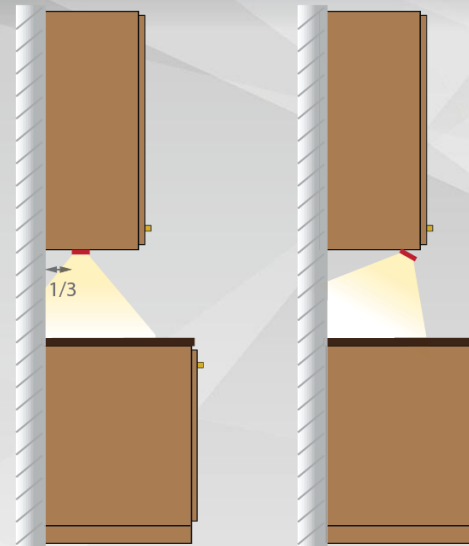

Helpful
Tips

12V DC Option typically used in boats and motor homes.

Frequently Asked Questions

Where do you mount under cabinet light?

One third of the distance from the edge of the wall.

Helpful
Tips

With UCA's adjustable mounting bracket, you can direct light outward toward work areas.

In case of glossy counter tops/backsplashes, you could mount the fixture closer to the edge of the cabinet and direct light inwards to create an indirect lighting effect. This helps limit the glare that arises from glossy surfaces.

Frequently Asked Questions

- **How do you determine how many light fixtures you need?**

Take measurements of every section of the under cabinet as shown in the diagram below:

Helpful
Tips

For the UCA, try to cover the entire length of the cabinet for uniform lighting. Ensure you allocate enough space for accessories/connectors (typically 1 -2")
