

Works with H style Head Units and the iPad 10.2" 7th Generation.

The Lilitab ID Accessory makes capturing images of ID-sized documents quick and easy. Using the iPad 7th Generation's rear camera, the ID Accessory's built-in mirror folds the camera's path to point downwards, enabling the image capture of ID cards placed in the tray.

Easy to integrate

You can use the Lilitab Kiosk Management System (KMS) to present your web-site and enable ID capture without a native app or any iOS programming. Alternatively you can use your own iOS app.

Lots of applications

Patient registration. Save your patients time by allowing ID and barcode capture of their insurance or patient card.

Visitor Record. Our ID accessory can capture and log visitor's driver licenses or ID cards at hotels, events, etc.

Security check-in. Anywhere security is a factor, capturing IDs can help avoid false entry and reduce threats.
