

The lilitab H3.0 Head Unit secures and protects your iPad (2017), iPad Pro 9.7 or 10.5", and Air 2

Lightweight and slim, with an optional handle, the Lilitab H3.0 Head Unit is designed with versatility in mind—from secure kiosk docking to hand-held use.

We thought of everything

Adaptable. Configurable with access to volume, power/home buttons, headphone jack and front/ rear cameras, with the ability to disable each independently with special inserts. Removing your tablet requires no tools.

Versatile. Can be used with all of our mount styles and configured for hand-held use with an optional handle and/or edge-charge port.

Tamperproof. All cables are protected and inaccessible to the public.

Accepts payment. Optional swipe payment module with Magtek eDynamo dip and swipe accessory integration (includes dedicated power line).

Head docking options. We have two options—both have automatic charging when docked (no cables to connect):

- **MagDOCK:** Magnetic docking with key lock/unlock.
- **SmartDOCK:** Powered lock/unlock with key backup, electronic access administration, chain of custody and remote kiosk monitoring.

Say goodbye to germs. Our optional *wipe-clean faceplate* has an integral polycarbonate film that protects the tablet's touchscreen and offers a surface that can be wiped with standard hospital cleaners. It was designed with input from Stanford Children's Hospital Infection Control experts to be the easiest-to-clean tablet kiosk on the market.

Slim design. Compact design—not much larger than the tablet itself.
