

Your business requires enterprise-grade intelligence on how your kiosks are performing wherever they are in the world.

Lilitab KMS is an integrated kiosk management system that provides rich insights into how staff and customers are utilizing technology in the field. Our web dashboard helps you manage every tablet kiosk in your enterprise, remotely, worldwide. Grant or revoke staff access. Compare performance and usage by location. Track uptime statistics such as number of transactions, volume of sales per kiosk and number of unique visitors. It's time to tap the true power of the tablet with Lilitab KMS

Secure Browser

KMS offers a secure browser with built-in analytics enabling deployers to rapidly prototype, build and deploy interactive solutions via standard web design practices. No iOS development needed!

Multi-User Support

When used with SmartDOCK, KMS facilitates the sharing of tablets among staff, utilizing UserID/PIN access to build a chain of custody for each tablet. Users can have their Unlock code delivered to their phone via a QR Code and unlock the tablet by showing the QR Code to the camera.

Tablet Security

Integrated geofencing notifies staff and management by alarm, text message, and/or email if the tablet leaves its intended use area. Tablet location is also monitored within the portal, so administrators know where every tablet is, all the time.

Remote Management

Every aspect of kiosk health network connection, charge status, dock/undock status, current user, location, wall power, user accounts and permissions—can be monitored and administered from anywhere in the world.

lilitab

Flexible Grouping

Groups functionality gives ultimate flexibility in organizing assets, users, and data according to the needs of the enterprise. Within each group, all elements interoperate freely—any user can use any tablet with any dock. Group data flows to the enterprise where it can be categorized and analyzed.

lilitab

Statistics and Reporting

Robust reporting features allow administrators to monitor kiosk performance in real time with metrics they configure, such as unique users, revenue per kiosk, and more. These reports can be generated for individual kiosks and at the group level to track key performance indicators.

Accessory Support

Lilitab KMS makes popular functions and peripherals including payment processing, receipt printing, tablet sharing, and barcode reading—available to your web application without the need for custom device integration.

SmartDOCK Savvy

KMS is built with SmartDOCK in mind, allowing deployers to fully leverage its intelligent features. When used together, KMS tracks lock/unlock status, tablet docked, last used by, wall power status, and supports sharing of tablets and docks among group users.
