

SPACEMAN

This WOW Signal has been modified for maximum sonic expression & communication beyond the known universe. It is now capable of usage in a vacuum; in zero gravity & other harsh environments existing in the outer limits of interstellar space. New frequencies are now available, enabling communication with alien life forms in galaxies beyond the reach of the original release.

The included modifications are explained below.

LEFT SWITCH (Depth Selector) - Right = Normal, Left = Deep Mode

Pushes OFFSET control into super deep & choppy settings. At extreme depths, signal may cut out completely. Simply turn OFFSET control counter-clockwise until signal returns.

TOP RIGHT SWITCH (Speed Selector) - Left = Slow, Right = Fast

LFO speed (via MHZ control) can now go both slower & much faster than before. In fast mode, speed becomes so fast that ring-mod & octave effects are possible.

BOTTOM RIGHT SWITCH (LFO Defeat) - Left = LFO ON, Right = LFO OFF

LFO can now be defeated to allow a fuzz-only tone. When defeated, the OFFSET control becomes a second manual filter, allowing for an incredible variety of tone shaping.

You will surely be thrilled by the expanded feature set of this Modded WOW Signal. Now bodily go forth to discover new planetary systems and extra-terrestrial life, as this improved fuzz communicator will not let you down.

Godspeed.
