

Chemical Content Analysis

Date: 29-07-2019

Client: Vitality

Product: Vitality CBD Full Spectrum Berry 300mg

Volume:

Batch No: 7482A-FSCBD245300

Lab ID: CBD0264 DOP: 28/05/2019

Visual Inspection:

Pale yellow liquid, translucent.

Method Summary:

0.1ml of sample was measured in a pipette and extracted in Methanol to provide a sample at 0.01mg/ml. CBD content was analysed on an Agilent HPLC fitted with a DAD detector. Content on HPLC was analysed against a standard calibration of CBD, CBN and THC, supplied by Restek, as well as CBDA and THCA supplied by Sigma-Aldrich. The results are

presented in Table 1 and Figure 1 below.

Compound	CAS Number	Concentration (mg/ml)	LoQ (μg/ml)
Cannabidiol	13956-291	9.98	0.1
Cannabinol	521-35-7	BQL	0.1
Delta-9- Tetrahydrocannabinol	1972-08-3	BQL	0.1
Cannabidiolic Acid	1244-58-2	BQL	0.1
Delta-9-Tetrahydrocannabinolic Acid	23978-85-0	BQL	0.2

BQL, Below Quantitation Limit.

% Content of Sample

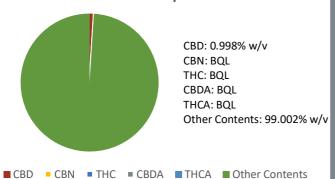

Figure 1. Pie chart of the analysis result.

Comments:

300mg of CBD in 30ml is equivalent to 10mg/ml

Acceptance Criteria: ±5% of target concentration CBD total, including CBDA, below legal limit of CBN, THC and THCA.

CBD- Cannabidiol

CBDA- Cannabidiolic Acid

CBN- Cannabinol. The legal limit for this compound is 1mg per container. THC- delta-9-Tetrahydrocannabinol.

THCA- delta-9-Tetrahydrocannabinolic Acid. The legal limit for both THC and THCA in this mixture is 1mg per container

The sample passes all acceptance criteria for CBD, CBN and THC.
