About our candles

A stay at home mama decided to create a toxin-free candle. I hand pour our soy candles in small batches and use lead free cotton wicks and essential oils. We hope you enjoy our long lasting and strongly scented candle!

Why soy wax?

Most candles are made of paraffin wax, which creates highly toxic benzene and toluene when burned (both are known carcinogens). Paraffin is a petroleum waste product and has to be deodorized and chemically bleached before it can be made into wax. We use 100% USA grown soy wax which is renewable and biodegradable (unlike petroleum based paraffin). Soy wax is also a longer burning candle and you can enjoy your candle without worrying about toxins being thrown into the air you breathe!

Why essential oils?

Many candles also contain artificial scents and dyes, which release additional chemicals when burned. Our candles are made with high quality phthalate free essential oils.
