

FOR: TOYOTA TACOMA ATTIC (CREW CAB ONLY) WILL NOT FIT ACCESS CAB

Welcome! This installation isn't rocket science but it is kind of like karate - you can hurt yourself or break something if you don't pay attention. Used properly, this Install Guide will tell you all you need to know - like Yoda, but with better grammar.

TOOLS YOU NEED: NEEDLE NOSE PLIERS

Please Note: This product is for 4th generation Toyota Tacoma's and after (crew cab only)

STEP #1

Locate the 2 hanger hooks on the rear ceiling of the cab and remove the covers by pulling.

STEP #2

Using the needle nose pliers, pinch the metal clasp inside the hanger hooks. Remove the hanger hook and also the metal clasp.

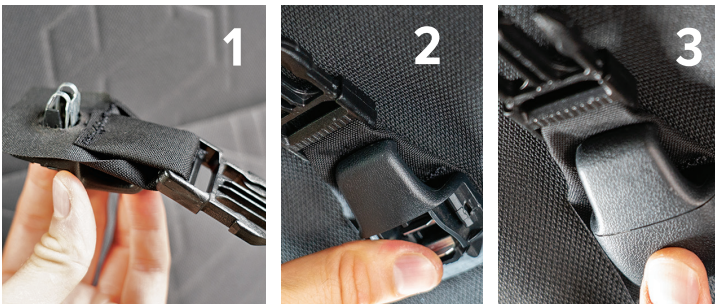

STEP #3

Re-insert the metal clasp into the hanger hooks. Take the included Rear Anchor Tabs and place them onto the hanger tabs with the metal clasp through the hole in the fabric.

continued

STEP #4

Take the Rear Anchor Tabs assembly from Step #3 and press the hooks back into the holes until you hear the click. Push the covers back onto both hooks.

STEP #5

Clip the attic to the buckles on the 2 Rear Anchor Tabs. **NOTICE:** Make sure that the attic is oriented so that the paracord is facing down.

STEP #6

Pass the 2 front straps on the attic over the grab handles and attach the G-Hooks of the attic back to the flat loops along the front edge of the attic.

WARNING: Do **NOT** attach the G-Hooks to the strap. They must be attached to the loops on the attic.

STEP #7

Pull the tails on the front straps out and away from the attic to achieve desired tension. Tighten the paracord by grasping the barrel lock with one hand and pull the end with the other to achieve desired tension.

NOTE: Make sure not to overload the attic - and use it to store softer lightweight items. Enjoy!

Thank you for choosing Blue Ridge Overland Gear. We are handcrafting the toughest bags and organizers for your adventurous life - right here in Bedford, Virginia, USA. It's not just American made, it's 'Blue Ridge Built'!
