

- Main body (Glass)
- Plastic parts (Polycarbonate:PC)
- Seals (silicone rubber, 304 stainless steel)

Base: titanium platinum SPE ion polymer
battery membrane 1000 ma.

O Hydrogen Water Manual

What is the Hydrogen-rich water?

Hydrogen-rich water was developed in Japan. In fact, hydrogen water is known not to be soluble in water. Through modern scientific technological means, it is now possible to enrich water with hydrogen. Scientific studies have shown that by consuming highly enriched hydrogenized water decelerates the body's cell aging process.

The fountain of youth Legend

In France, Lourdes, Germany's Nordenau and Lafayette, Mexico, there are so called "fountains of Youth" that attract travelers from around the World. There is a little bit of truth to these

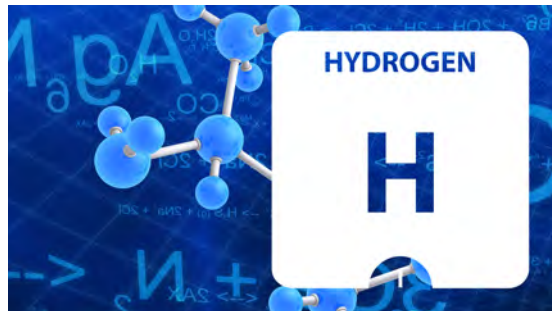

myths. Whether it was Lourdes' spring water, the natural water of Nordenau, or the lake of Bama, they have discovered that the hydrogen content of their water was extremely high, contents reaching 0.35×10^{-6} PPM, while the ordinary water was almost zero. It is believed that active hydrogen is a great antioxidant that can remove free radicals in the body supposedly slowing down the aging process.

Maintenance methods

1. Wash the water container portion every time after use.
2. Hydrogenate the water only once. If pressed more than one time may cause the unit to break due to the pressure.
4. Use only the provider charger when charging this item. If not it may lead to damaging the unit.
5. Aside from the water container do NOT get this unit wet which may cause damage or electrical injury.
6. Be cautious that water containment is not leaking from any part of this unit.
7. For no reason disassemble this product for your safety and to prevent from voiding your warranty.
9. Use only suitable drinking water.

How to Use

1. Pour purified or drinking water into the container. Be sure the lid is tightly close to ensure there is no leakage.
2. When ready to activate press the power button which will light indicating that the process has started. You will notice a large number of hydrogen bubbles in the bottle rise from the bottom.
3. Hydrogen production is complete the power light will turn off indicating the process has completed.
4. It is recommended that you consume the hydrogen enriched water within 30 minutes of processing because with the increase in time, the hydrogen will slowly evaporate.
5. When the power indicator is red that means the power is low and requires to be charged for about 2-3 hours. When the light turns blue that will indicate that the unit is fully charged.
6. Use this product with only purified drinking water. Tap water and others may cause illness. This product does not clean water
