CHORS

A detail is not a mere  
detail. It is inherent in  
every design.

— Charles Eames

# Chors is us

The urge to meet customers' needs is what motivates us to continually develop. Looking for interesting technological solutions, we are at all times improving the quality of our products while attaching great importance to their design, functionality, aesthetic qualities, style, and usefulness.

We believe that only well-made products can be beautiful.

We put great emphasis on disseminating the knowledge about selecting the right sources of light. We do all of that to make sure our customers can enjoy long-lasting lighting solutions that are good for their health and pleasing to the eye.

We'll be happy to cooperate with you!

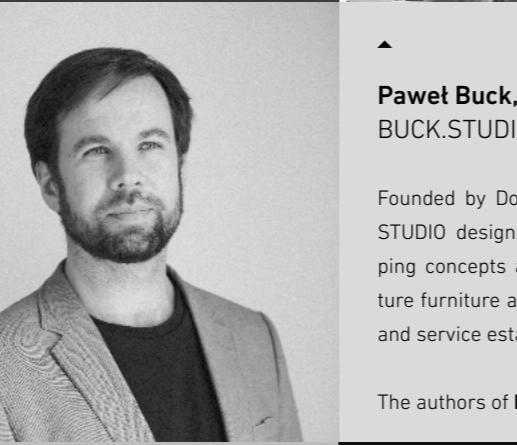

## Our designers

**Paweł Buck, Dominika Buck**  
BUCK.STUDIO

Founded by Dominika and Paweł, the BUCK. STUDIO design house specialises in developing concepts and interiors, including signature furniture and lights dedicated to catering and service establishments.

The authors of **Maia**.

**Fabian Baumann**  
Formfjord

The owner and co-founder of the Berlin based design studio Formfjord. Along with his team, he works for a number of globally well-established brands. While attaining success, he is extending his over ten years' experience of design.

The autor of **Reel** and **Telescope**.

**Piotr Kalinowski**  
Modelista

A Wrocław based architect and the owner of the brand Modelista. He specialises in designs of hotel interiors. His portfolio includes designs for numerous global hospitality brands.

The autor of **Ambiente i Dogirami**.

**Magdalena Klimas**

A graduate of the Department of Design at the Academy of Fine Arts in Wrocław, Tool and Environment Design Workroom. As far as design goes, she's inclined towards minimalism as well as comprehensive and responsible design approach.

The autor of **Orionis**.

**Artur Śleziak**  
The co-founder of Chors

He is in charge of product lines and the vision of business development. He is the person behind the idea of product lines including Myco, Hello, Moi, and many other ones. His passion for technology, ecology, and sustainable development is reflected by the quality of our component choices and production technology aiming to ensure the best possible workmanship.

**Magdalena Lasota**  
Strop Studio / Co-founder of Chors

She is responsible for the designs of our lines Thiny Snake and Thiny Slim. Also, she has co-designed our Myco line. Together with Stawomir Okrzesik, she runs the photography studio Strop, which is in charge of all photography showcasing Chors products. She is the author of the idea behind the "Box of Light" photo session.

## Light changes space

The influence of lighting on the space around us never ceases to fascinate us. Appropriately selected lights play a very important role in interior arrangement not only because of their design. Good lighting enhances the advantages of an interior project and the quality of materials used, as well as making it possible to emphasise details and add life to colours. By changing lighting during the day, you can change the character of an interior.

▲ Interior of the store Pan Pablo in Wrocław

▲ Interior of the restaurant Dinette in Wrocław  
Design: BUCK STUDIO

## To be ECO

From the morning to late night, our existence is filled with duties, with the amount of time we spend in places illuminated with artificial light continually increasing. In big cities, it is already nearly half of our lives. It has become necessary for the term ECO to also encompass lighting, which beyond doubt contributes to the rise in power consumption, and therefore our spending.

The LED technology is a response to the need for limiting power consumption and the resulting costs of lighting. It is an investment reflected by tangible financial benefits, even at home. Moreover, LED modules which we apply don't contain mercury and other substances harmful to us and our environment.

Design, too, has a significant role in protecting the natural environment. All materials which we use at Chors are recyclable. Also, they don't contain heavy metals and other hazardous elements.

## Colour rendering index

When choosing a source of light, one must not only be guided by the output and intensity of lighting but also the colour temperature and colour rendering index. It's them that considerably influence the user's mood and the way they feel, but also emphasise the advantages and character of interiors.

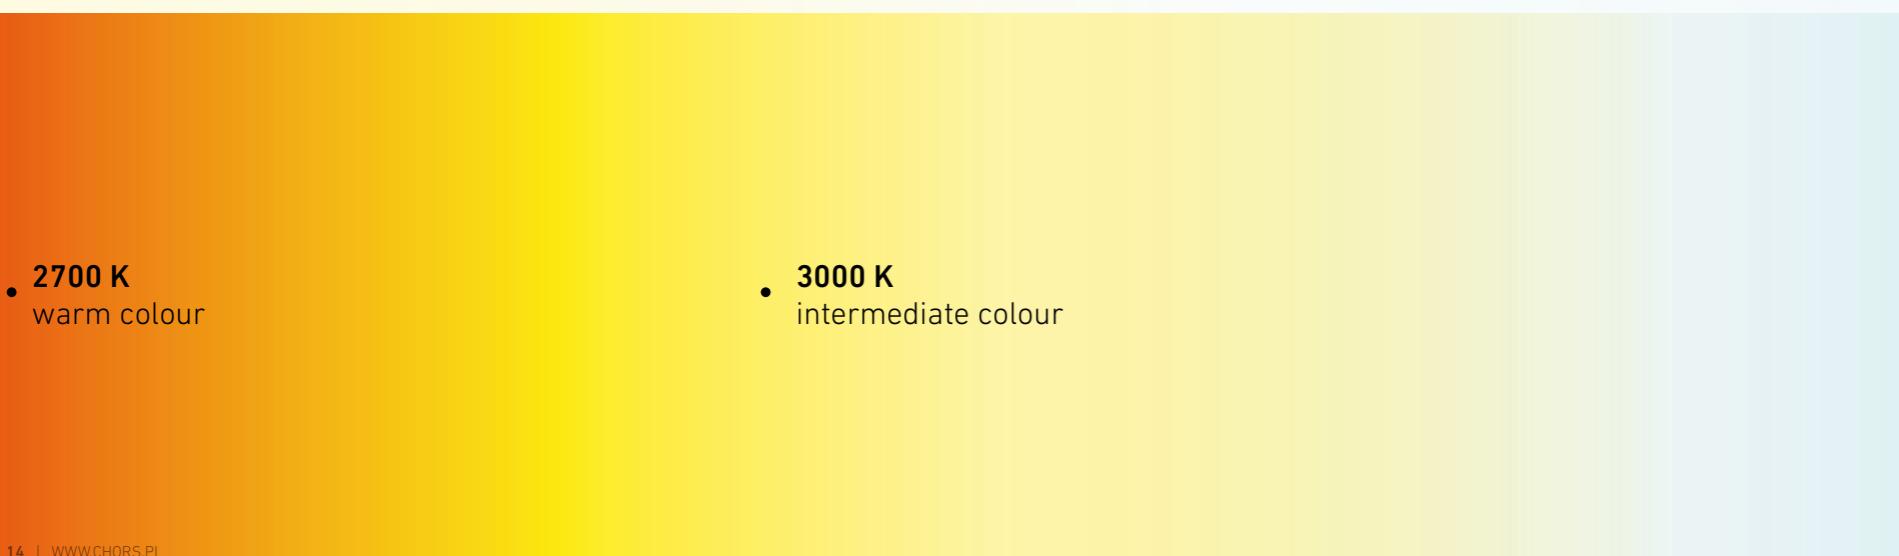

The colour rendering index (RA) is an important parameter that is a testimony to product quality. The higher the value, the more vivid and more natural are the colours of the objects being illuminated.

To be sure that the light we use is good for our health, similar to natural, and that it renders colours and hue contrast well, we must pay attention to the value of the colour rendering index.

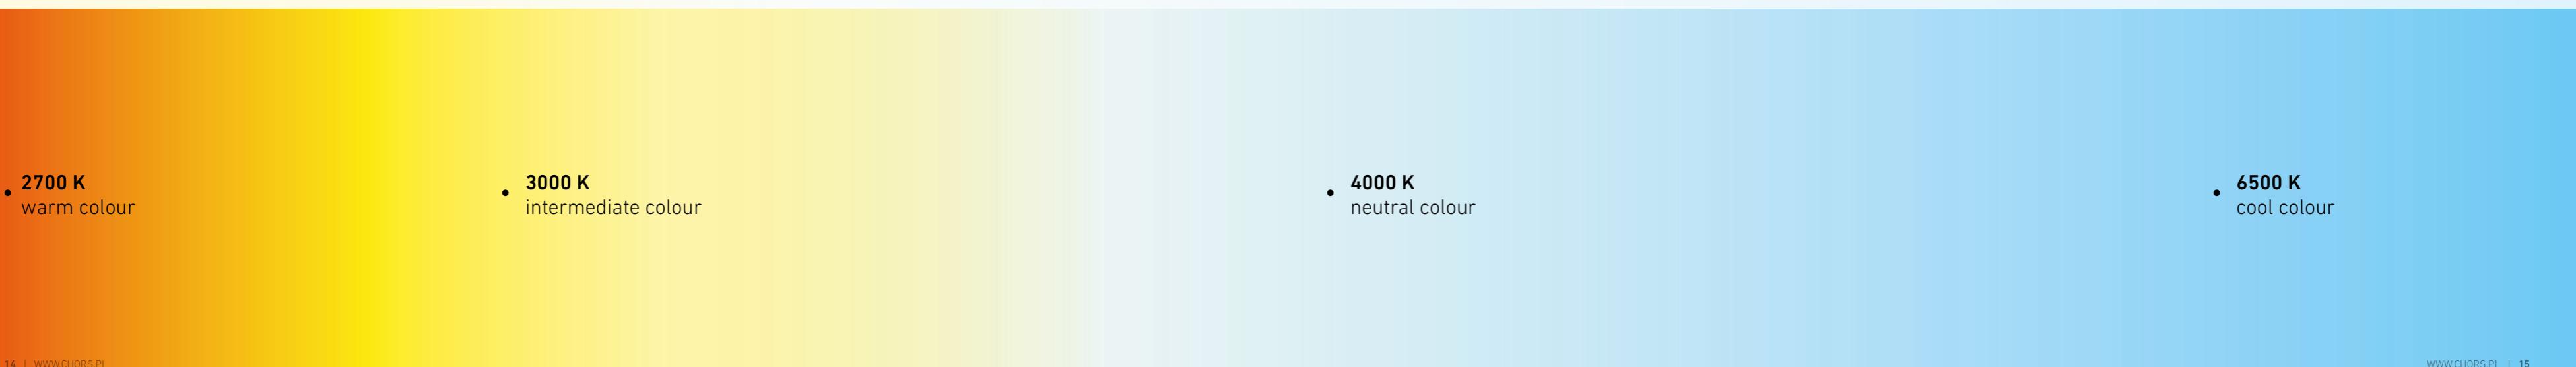

The minimum value harmless to our health is  $RA \geq 80$ . The maximum, which is the standard one, is  $RA = 100$ .

The LED sources we apply in our luminaires are selected in a way ensuring that their RA is as close to the upper threshold as it is possible. Thanks to that, you can find luminaires of  $CRI \geq 95$ , or even 97, among our range.

- **2700 K**  
warm colour

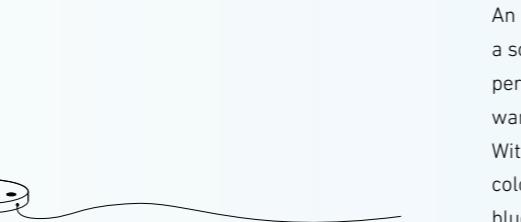

- **3000 K**  
intermediate colour

## Colour temperature

Colour temperature describes the colour of light emitted by a given source.

The colour rendering index describes how a given source of light renders colours on illuminated objects.

The example graph shows the colour rendering index (RA) for a LED module of 3,000 K (colour temperature),  $CRI \geq 95$ .

An important parameter that must be taken into account when choosing a source of light is the obtained colour of white light, i.e. the colour temperature expressed in kelvins [K]. Low values mean that the colour is warm - i.e., typical of light emitted by candles and traditional light bulbs. With the increasing value of the parameter, light comes closer to a cool colour, referred to as daylight and evoking an impression of the colour blue. By applying appropriate materials, one can in fact obtain any colour of light. The choice of the light colour depends on personal preferences and the function of the interior. When buying lighting that features a particular colour temperature, one has influence on how the interior is perceived, which is important both in the case of service establishments and residential interiors.

At Chors, we apply 3 light colours as standard: 2700 K (W), 3000 K (NW) and 4000 K (N), and upon special request - also 5,600 K (D) diodes.

**The warm colour of 2700 K (W)** is perfect for relaxation and rest, creating a pleasant mood. A room lit in this way makes an impression of being cosier, friendlier and welcoming atmosphere. The colour emphasises the colour of wood and natural materials, making reds, yellows, and greens more vivid.

**The intermediate colour, 3000 K (NW)**, is white, warm, and free of visible yellow tones. It's quite universal and, to all intents and purposes, it works well in every interior. Greys and white, as well as more vivid colours, will look good when illuminated with it.

**The cooler colour of 4000 K (N)**, is neutral. It stimulates users of interiors, allowing them to focus more effectively without straining their eyesight. It's recommended for work and study, and it goes particularly well with modern style interiors.

## Lenses

The miniaturisation of LED sources inspires us to design luminaires that offer possibilities of changing the environment where they are used. A good example of this is luminaires featuring changeable illumination angle.

Thanks to a glass lens placed in a special rotatable ring, it's possible to frame selected objects with light, also after installing the fitting. The turning action is smooth while the framing adjustment resembles setting camera lens sharpness.

The high-quality lens softens the light and prevents its distortion, while the frosted part near the diode reduces the glare effect.

Our range includes luminaires allowing the adjustment of the illumination angle by 8 and 40 degrees or 15 to 50 degrees, which provides a wide array of possibilities of making the shaft of light cater to the user's individual needs.

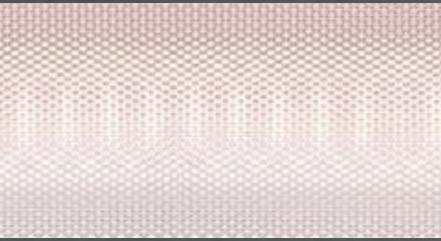

## Types of diffuser screens

Even though the high efficiency of LED lights enables illuminating rooms while optimising the cost of operation and purchase, it also requires a different approach to the diffuser screens used. To ensure the user's comfort, low power consumption and safety, we apply unique solutions to diffuse light. All of that serves the purpose of limiting glare, as far as it is possible, while retaining optimal efficiency and high quality.

### SOFT

Milk white diffuser screen absorbing approx. 30% of light and diffusing it at the angle of >90°, thanks to which light is distributed evenly in the whole interior. Recommended for general lighting, where there is no need to concentrate when working at a computer.

### PR

Prism diffuser screen absorbing approx. 8 % of light and diffusing it at the angle of 60°. It enables concentrating all light output in a single place, e.g. a workstation tabletop. Dedicated to offices and workrooms. A transparent diffuser screen limits glare. The LED points are visible as subtle rings forming the shape of a spring.

### SPR

A new type of a prism diffuser screen, which absorbs only 10% of light while retaining the unified glare rate UGR<19%. Its special structure renders single diodes invisible, which considerably limits glare while improving the user's work comfort and concentration.

## Dimming

To be able to fully enjoy the arrangement possibilities offered by lighting, it is worth considering the application of dimmable luminaires. Thanks to this feature, you can choose the amount of light on your own and adjust it to your needs during a given time of the day, thus creating the right mood in the interior. Most Chors luminaires offer the dimming option. These have the words TRIAC or DALI in their product name, depending on the system which they are part of.

### Triac

TRIAC is a simple dimming system working with just a standard three-conductor power supply. Thanks to the potentiometer in the place of a light switch, you can smoothly adjust the amount of light in the range of 100 to 10%.

### Dali

DALI is a sophisticated dimming system offering better features but also requiring more of your electrical installation. To be able to use it, you need a five-conductor system, thanks to which you have a possibility of addressing single luminaires and full control even with a mobile phone. In this case, the dimming range is 100 to 1%.

## An integrated LED light source allowing smooth adjustment of the lighting angle

### Lightpro

A module applied in Chors lights, so far available for a G53 Ø 111 mm light source. It's an integral part of the luminaire, making it more convenient by enabling lighting angle adjustment in the range of 15-50 degrees and offering the highest quality LED light. If you're intent on applying a LED-based solution, such a factory-installed module makes it possible to avoid trouble choosing a LED substitute of a halogen bulb while unquestionably improving the luminaire's aesthetic qualities.

### Super White diodes

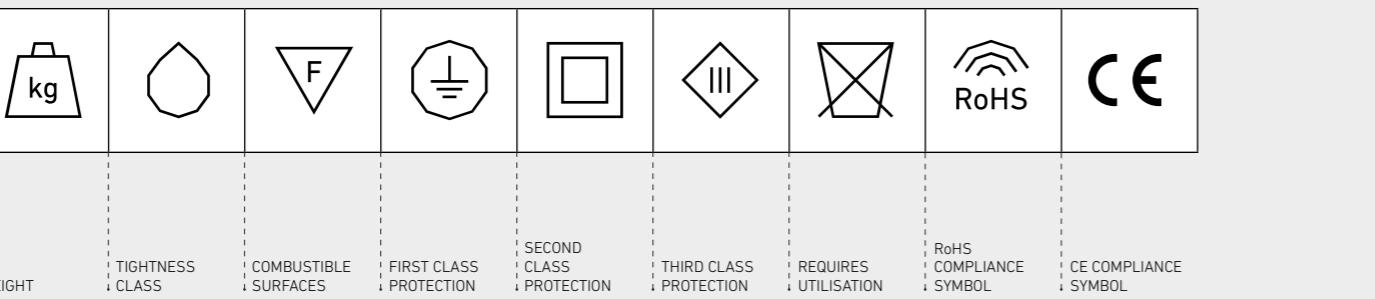

To cater for the most demanding needs, such as lighting a museum, an art gallery, restaurant, flat or a store, we offer the Super White module. Thanks to its innovative method of generating light, it attains CRI $\geq$ 97. The S diodes faithfully render colours, are energy-efficient, and offer the full sunlight spectrum. Its additional advantage is blue light reduction. In terms of quality, they are superior to the OLED technology. The module versions offered are SW (2,700 K), SNW (3,000 K) and N (4,000 K). On special request, we also supply the SD (5600 K) version.

### Halogen

We offer a number of bulbs with various lighting angles for the G53 halogen light source based luminaires. Additionally, we offer a possibility of applying LED substitutes, but in such cases we recommend discussing your choices with our staff. Not all substitutes offer parameters compatible with transformers used by us.

### How to read colour options?

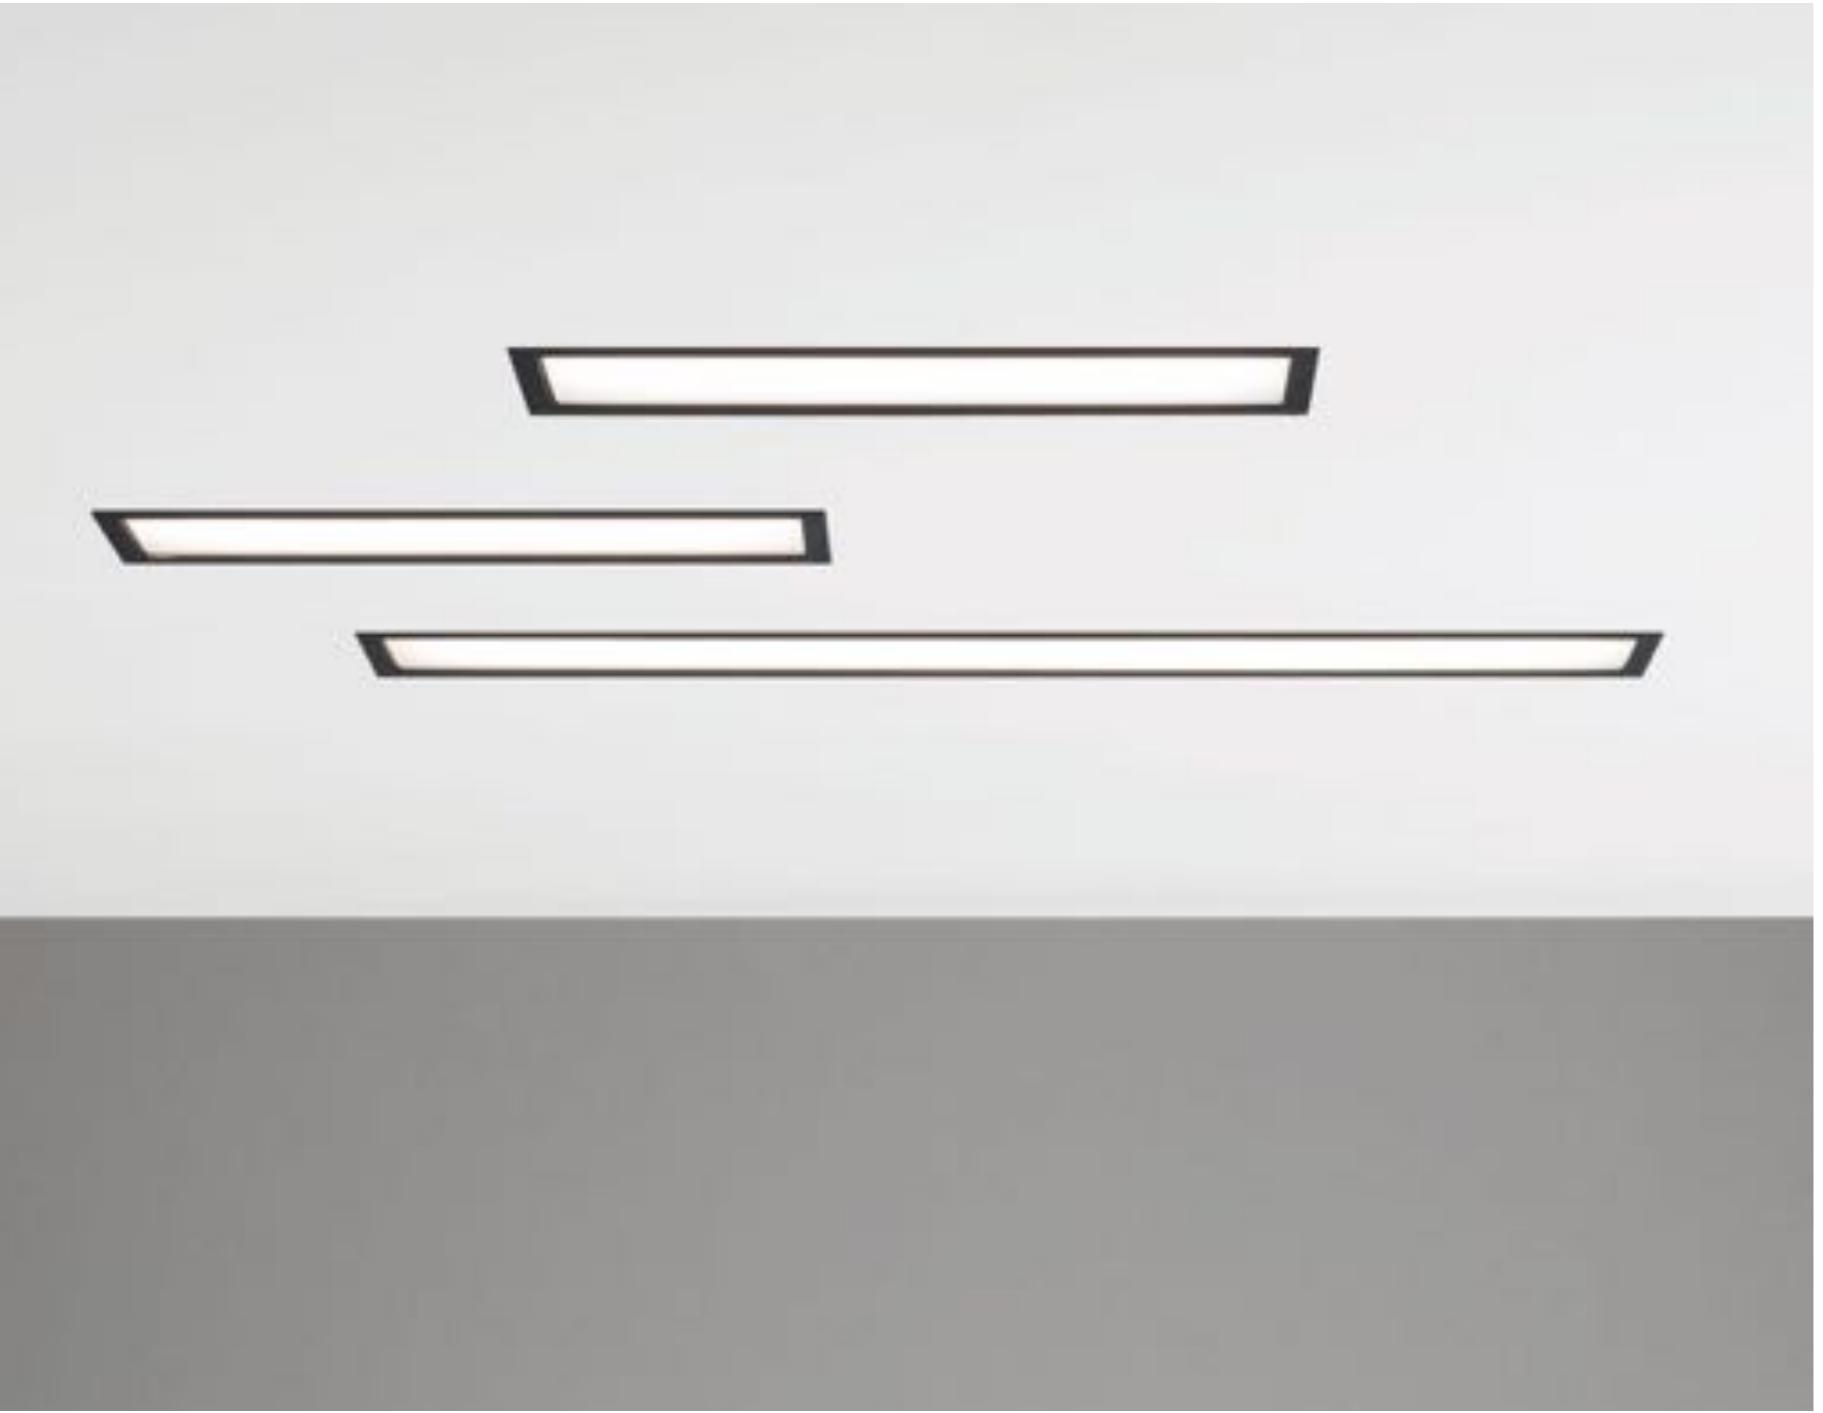

## Recessed

Luminaires for mounting in suspended ceilings and recesses - wherever light is expected to play a key role. They subtly blend in the ceiling allowing one to enjoy light in its purest form. They create a foundation of lighting in any interior.

# Accent IN

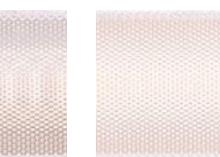

A line of modern recessed luminaires with a delicate frame functionally covering the mounting hole. It ensures pleasant and evenly distributed interior lighting.

APPLICATION: Basic lighting. It will work perfectly at establishments such as clubs, galleries, hotels, but also as lighting for the office and home.

INDEX: 41.3101.Cx6 → 1 – SOFT / 2 – PR / 3 – SPR

## DIFFUSER SCREENS

#### EASY INSTALLATION

20 minutes is enough to connect the luminaire and fit it to the ceiling. It can be fitted where the panel is 5 to 25 mm thick. On special request, we also offer a version that can be fitted to acoustic ceilings.

One of the Novotel Wroclaw Centrum interiors  
Design: Tremend

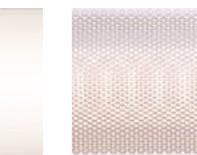

# Accent RT

Accent RT is the essence of minimalism while perfectly harmonising with modern architecture and interiors in a minimalist or loft-like style. It allows easy design of light lines where the frame is invisible.

APPLICATION: Basic lighting. It will work perfectly at establishments such as clubs, galleries, hotels, but also as lighting for the office and home.

## DIFFUSER SCREENS

Luminaire available with three types of diffuser screen: SOFT, PR, oraz SPR. Please go to page 17 for more information.

### EASY INSTALLATION

Fitting one frame to the Accent RT luminaire takes less than 30 minutes and not more than an hour including finishing work and painting. Due to the process of surfacer drying, full surface finishing takes up to 48 hours. After the process is completed, it's enough to fit the luminaire into the recess (photo 2).

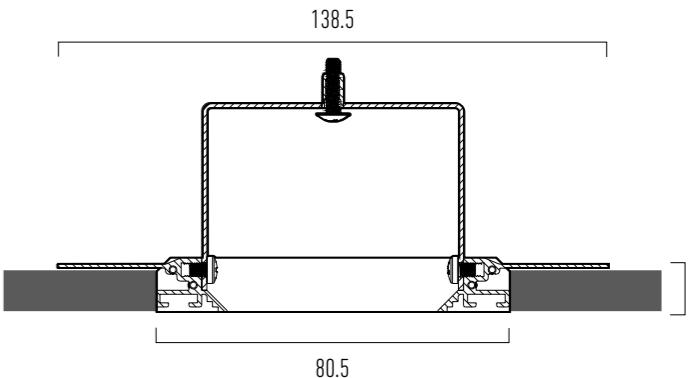

Fot 1. Accent RT before finishing work.

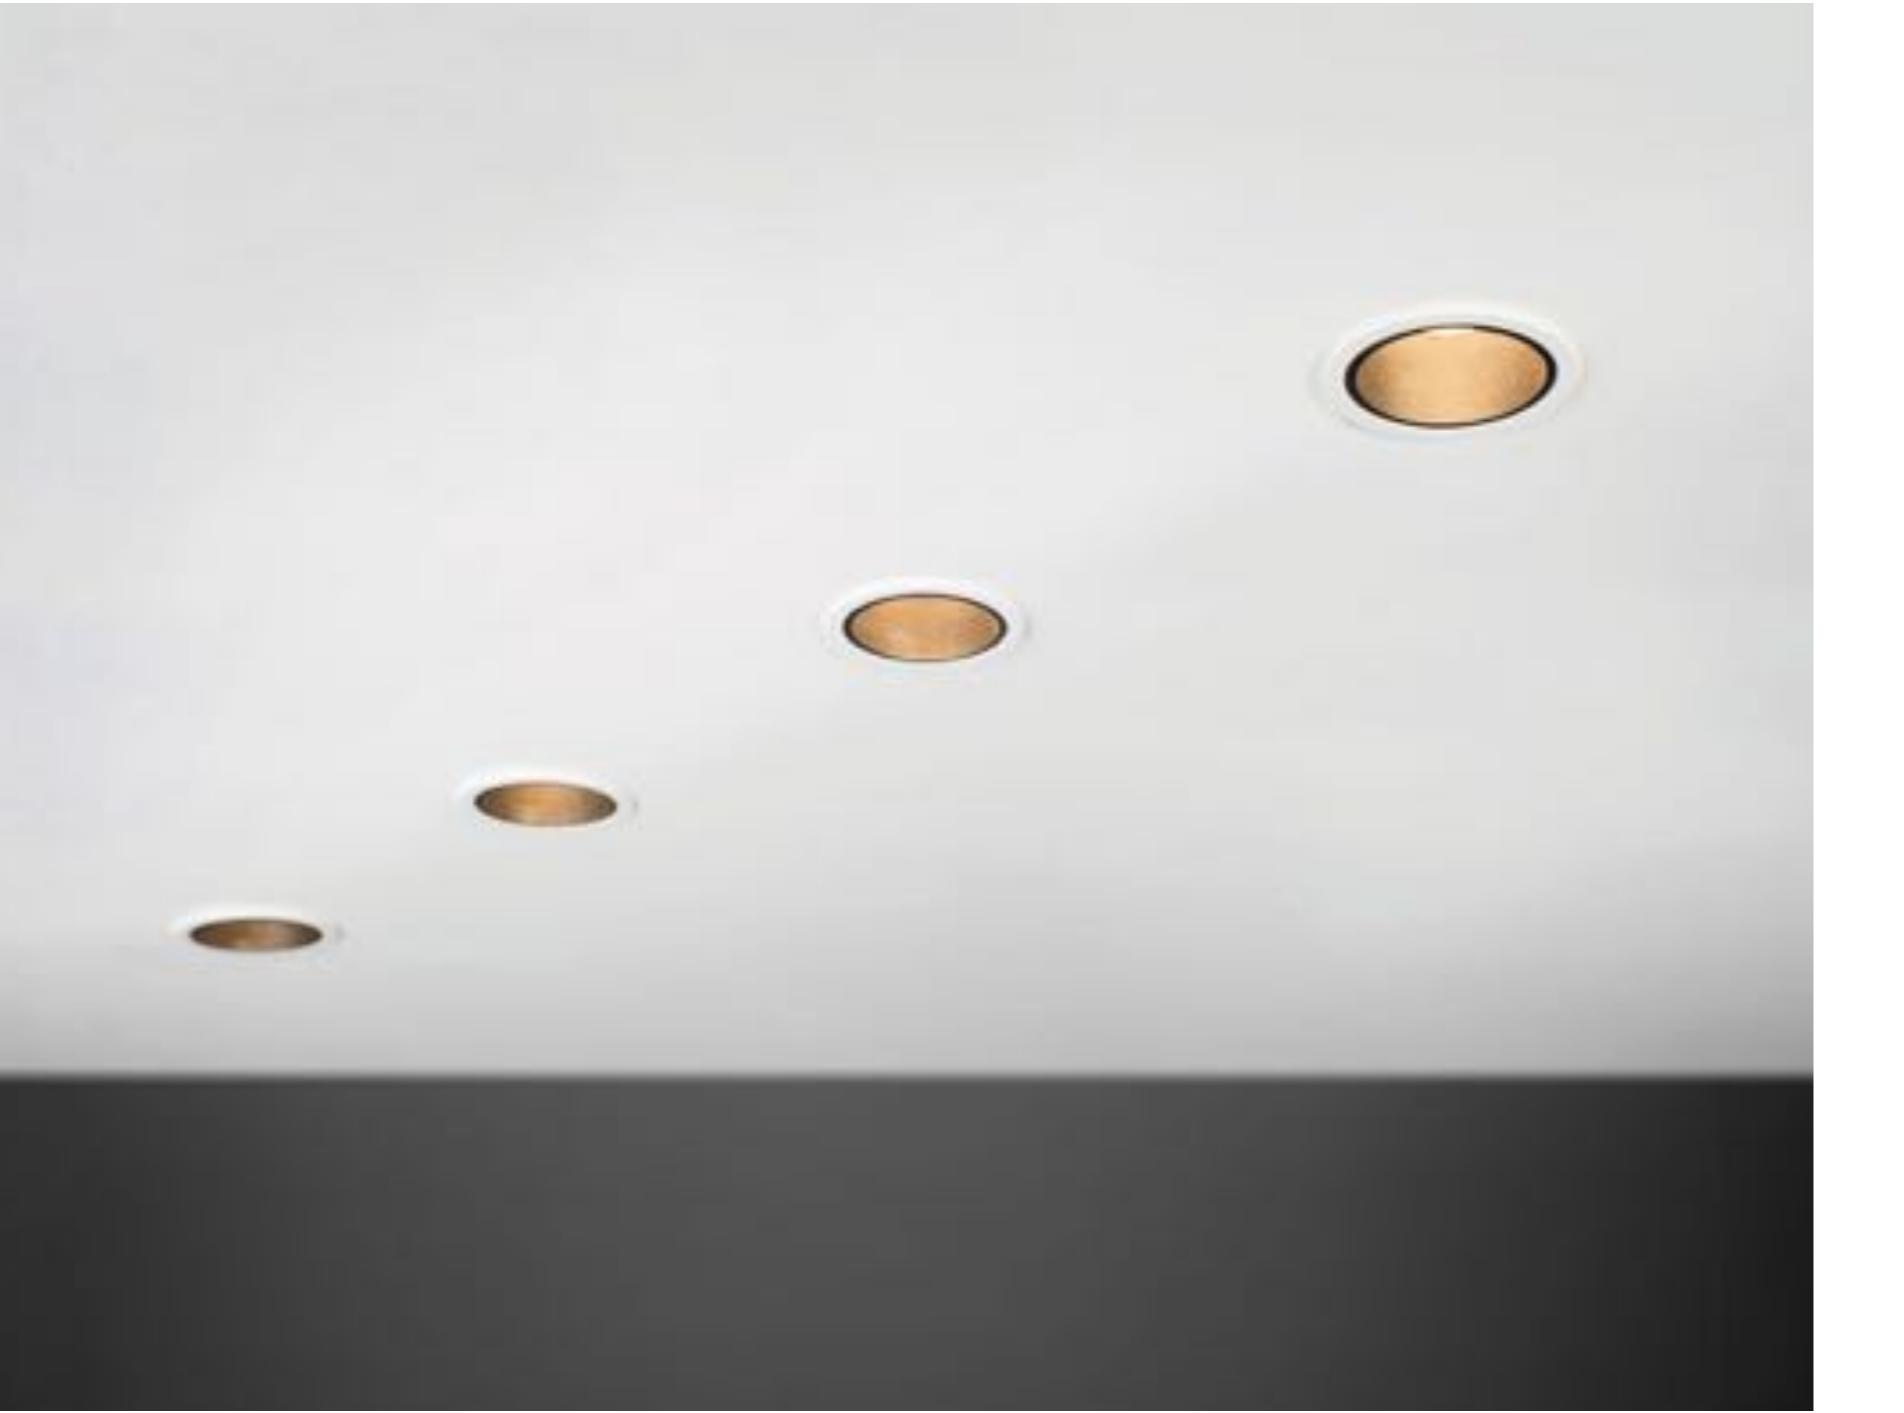

Fot 2. Accent RT after finishing work.

### HOLDERS

The construction is rigid, which facilitates installation. The holders adjusted to the luminaire's height enable fitting and unfitting it while leaving the ceiling surface intact. The system requires application of a 12.5 mm panel, which is standard in the construction industry.

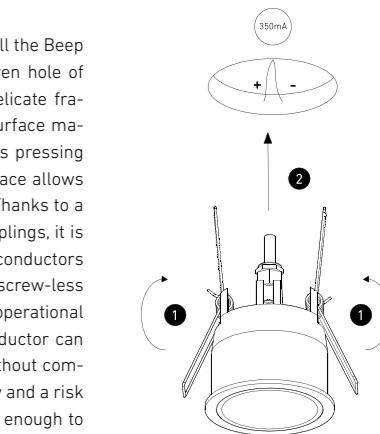

## Beep IN

Beep IN are ceiling recessed luminaires equipped with a very efficient 6 W LED source featuring output equivalent to a 50 W halogen bulb. Its high colour rendering index makes the light natural and ensures that colours look real. The luminaire's increased tightness (IP65) and low-voltage power supply unit make it perfect for applications in interiors with high humidity levels.

**APPLICATION:** Basic, complementary and spotighting. It will work perfectly as lighting for terraces or bathrooms but can also be fitted directly over a shower unit or at a swimming pool.

### EASY INSTALLATION

It only takes 15 minutes to install the Beep IN. It's enough to cut out an even hole of 53 mm in diameter, and the delicate frame will cover any loss in the surface material. The application of springs pressing the luminaire to the ceiling surface allows fitting it to 9 to 25 mm panels. Thanks to a special system of electrical couplings, it is possible to connect the supply conductors to the power supply unit in a screw-less manner, which will ensure operational safety for many years. The conductor can be repeatedly put in and out without compromising the operational safety and a risk of damaging the luminaire - it's enough to press the flexible outlet next to the socket.

# D

D is a spotlight designed to be fitted to a suspended ceiling or recess. Thanks to the fully adjustable lighting direction, its application makes it possible to play with light and focus it according to needs of use. The type of light source should be chosen already at the time of purchasing a luminaire. A version supporting halogen lights or LED substitutes, or one expanded by a Lightpro module (p. 19), which becomes an integral part of the light - ensuring adjustable lighting angle in the range of 15° to 50°.

APPLICATION: Modern directional spotighting. Perfect for business establishments and at home.

It is possible to choose different light sources.

THE LIGHT REQUIRES A POWER SUPPLY UNIT OR TRANSFORMER,  
P. 329

### EASY INSTALLATION

20 minutes is enough to fit our D line luminaires. A 120 x 80 mm, 170 x 80 mm or 240 x 80 mm hole must be cut out (the size of the hole depends on the luminaire version). Next, anchor plugs and screws must be fitted in appropriate spacing. The power supply unit or transformer should be placed in the cut out hole. Thanks to a special system of electrical couplings, it is possible to connect the supply conductors to the power supply unit in a screw-less manner, which will ensure operational safety for many years. The conductor can be repeatedly put in and out without compromising the operational safety and a risk of damaging the luminaire - it's enough to press the flexible outlet next to the socket. After connecting the power supply unit or transformer, the luminaire must be fitted to the ceiling with decorative nuts.

## D Bay

D Bay is a frame enabling an aesthetically pleasing recess for fitting our D line luminaires. It allows safe and quick fitting and unfitting of lighting which ensures that the ceiling surface is left intact. Available for sale by running metre.

Example: an installation option using D luminaires with our D Bay system.

INDEX	DESCRIPTION
<b>D BAY - CM</b>	84.3001.abc D light fitting recess - in cm. Maximum length of a single piece - up to 4 running metres.

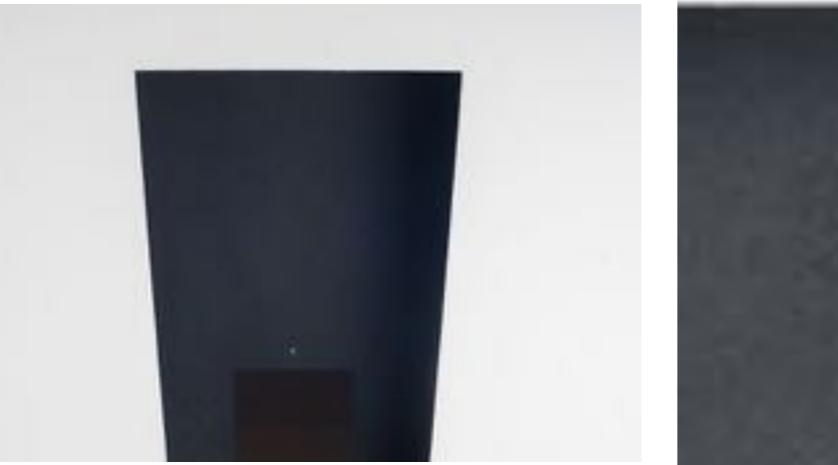

#### EASY INSTALLATION

D Bay enables fast, reliable and trouble-free fitting of the recess to a plaster-cardboard panel ceiling. The system's advantages include a possibility of arranging lights in any part of the recess. Fitting one frame takes up to than 30 minutes and not more than an hour including finishing work and painting. Due to the process of surfacer drying, full surface finishing takes up to 48 hours.

#### EASY INSTALLATION

The easy fitting of Fusion R is ensured by the application of a propeller-like element. When the crew is turned in, the propeller turns and blocks the luminaire pressing it to the ceiling panels. Thanks to a special system of electrical couplings, it is possible to connect the supply conductors to the power supply unit in a screw-less manner. The conductor can be repeatedly put in and out without compromising the operational safety and a risk of damaging the luminaire - it's enough to press the flexible outlet next to the socket.

#### DELICATE FORM

The small-size and sleek frame covers the installation hole and any possible damage to the ceiling surface.

Example: Fusion R fitting option

One of the Novotel Wrocław Centrum interiors  
Design: Tremend

# Fusion RT

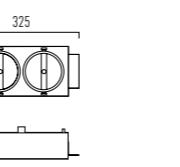

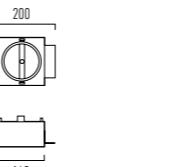

The Fusion RT light was designed for frameless fitting to a suspended ceiling. Its special design enables permanent access to the power supply unit (without the risk of damaging the ceiling). The fully adjustable lighting direction makes it easy to play with light and focus it according to needs. Fusion RT offers various light source options. Already when purchasing the luminaire, the client must choose either the version supporting halogen lights or LED substitutes, or the one expanded by a Lightpro module (p. 19), which becomes an integral part of the light - ensuring adjustable lighting angle in the range of 15° to 50°.

APPLICATION: Modern directional spotighting. Perfect for both business establishments and at home.

#### EASY INSTALLATION

The light design enables fitting it to 9 to 25 mm ceiling panels. After appropriate finishing, the cable box becomes integrated with the ceiling ensuring an interesting architectural feature.

Interior of the restaurant HINT/PURO HOTEL in Wrocław  
Design: BUCK STUDIO

# MFusion 110

Our MFusion line features a delicate, aesthetically pleasing frame and low height. Its ball-and-socket joint ensures freely adjustable lighting direction, while the glass lens makes it possible to change the lighting angle all the way from 8° to 40°. MFusion makes it easy to play with light and enables individual choices of space creation.

**APPLICATION:** Focused lighting. It will work perfectly at a museum, gallery, hotel, or in residential spaces.

**ADJUSTABLE LIGHTING ANGLE**  
The light's design makes it possible to set the lighting angle in the range of 8° to 40°. The glass lens, placed in a special ring, can be turned, which enables framing particular objects. The turning action is smooth while the framing adjustment resembles setting camera lens sharpness. For more information on the lenses please go to page 16.

**EASY INSTALLATION**  
It only takes 15 minutes to fit MFusion. Thanks to a special system of electrical couplings, it is possible to connect the supply conductors to the power supply unit in a screw-less manner, which will ensure operational safety for many years. The conductor can be repeatedly put in and out without compromising the operational safety and a risk of damaging the luminaire - it's enough to press the flexible outlet next to the socket.

## MFusion L

Our MFusion line features a delicate, aesthetically pleasing frame and low height. Its ball-and-socket joint ensures freely adjustable lighting direction, while the glass lens makes it possible to change the lighting angle all the way from 8° to 40°. MFusion makes it easy to play with light and enables individual choices of creating custom spaces.

**APPLICATION:** Spotlighting. It will work perfectly at a museum, gallery, hotel, and restaurant, or in residential spaces.

### ADJUSTABLE LIGHTING ANGLE

The light's design makes it possible to set the lighting angle in the range of 8° to 40°. The glass lens, placed in a special ring, can be turned, which enables framing particular objects. The turning action is smooth while the framing adjustment resembles setting camera lens sharpness. For more information on the lenses please go to page 16.

## La Famille

This family of recessed lights features consistent design and adjustable lighting angles. The three diameters and various light outputs make it possible to adjust the lighting performance to the particular needs and décor of the interior. La Famille's distinctive features are its simple and pure form and the universal shape, in line with the current trends in design.

APPLICATION: Modern directional spotighting. It is perfect for business establishments, offices and home.

# Moi IN

Moi (French for I) – is the first of the three lights in the family featuring pure and minimalist design and a small diameter (35 mm). It provides subtle light that emphasises the character of décor and offers adjustable lighting angle and direction. Moi IN was designed to be fitted to ceilings or walls. It will go well with spaces such as a museum or restaurant, but also residential interiors with a modern, loft-like feel.

THE LIGHT REQUIRES A POWER SUPPLY UNIT, P. 329

# Maman R IN

Maman (French for Mum) – the second luminaire in the La Famille line. Maman R IN features a diameter of 50 mm. The adjustable lighting angle and direction allow the light to cater for the needs of the interior's décor thus emphasising its character. Maman was designed to be fitted to ceilings or walls. One of its key advantages is the possibility of choosing lighting intensity, which makes it suitable for both public spaces and residential interiors.

Series: LaFamille

# Papa R IN

Papa (French for Dad) - the biggest luminaire in our La Famille line. Its distinctive feature is the relatively considerable diameter - 60 mm, as well as its high luminous flux (over 2,000 lm). The adjustable lighting angle and direction allow the light to cater for the needs of the interior's décor thus emphasising its character. Papa was designed to be fitted to ceilings or walls. Its advantage lies in the possibility of choosing lighting intensity, which makes it look superb in both public spaces and residential interiors, emphasising their unique character.

## ADJUSTABLE LIGHTING ANGLE

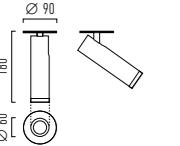

The design of La Famille lights enables adjusting the lighting angle in the range from 8° to 40° (Moi) and 15° to 50° (the other lights in the family). The glass lenses, placed in a special ring, can be turned, which enables framing particular objects. The turning action is smooth while the framing adjustment resembles setting camera lens sharpness. The glass lens softens light and prevents its distortion.

## EASY INSTALLATION

Fitting La Famille luminaires takes 15 minutes. It's enough to cut out an even hole of 75 mm in diameter, and the flange will cover any loss in the surface material. The application of springs pressing the luminaire to the ceiling surface allows fitting it to 2 to 25 mm panels. A special system of electrical couplings enables connecting the supply conductors to the power supply unit in a screw-less manner. The conductor can be repeatedly put in and out without compromising the operational safety and a risk of damaging the luminaire - it's enough to press the flexible outlet next to the socket.

## Maia IN

Maia IN is a recessed luminaire designed by BUCK STUDIO. Two versions are available - featuring one or two light sources. Its slender form and subtle simplicity will please the eye of those who value subtle design. The spotlight will discreetly mark its presence in the interior. The high quality integrated and energy-efficient LED light source provides natural-looking light. Its optical lens enables shifting the lighting angle between 8° a 40°.

**APPLICATION:** Directional spot lighting. Perfect for business establishments, offices, and residential interiors.

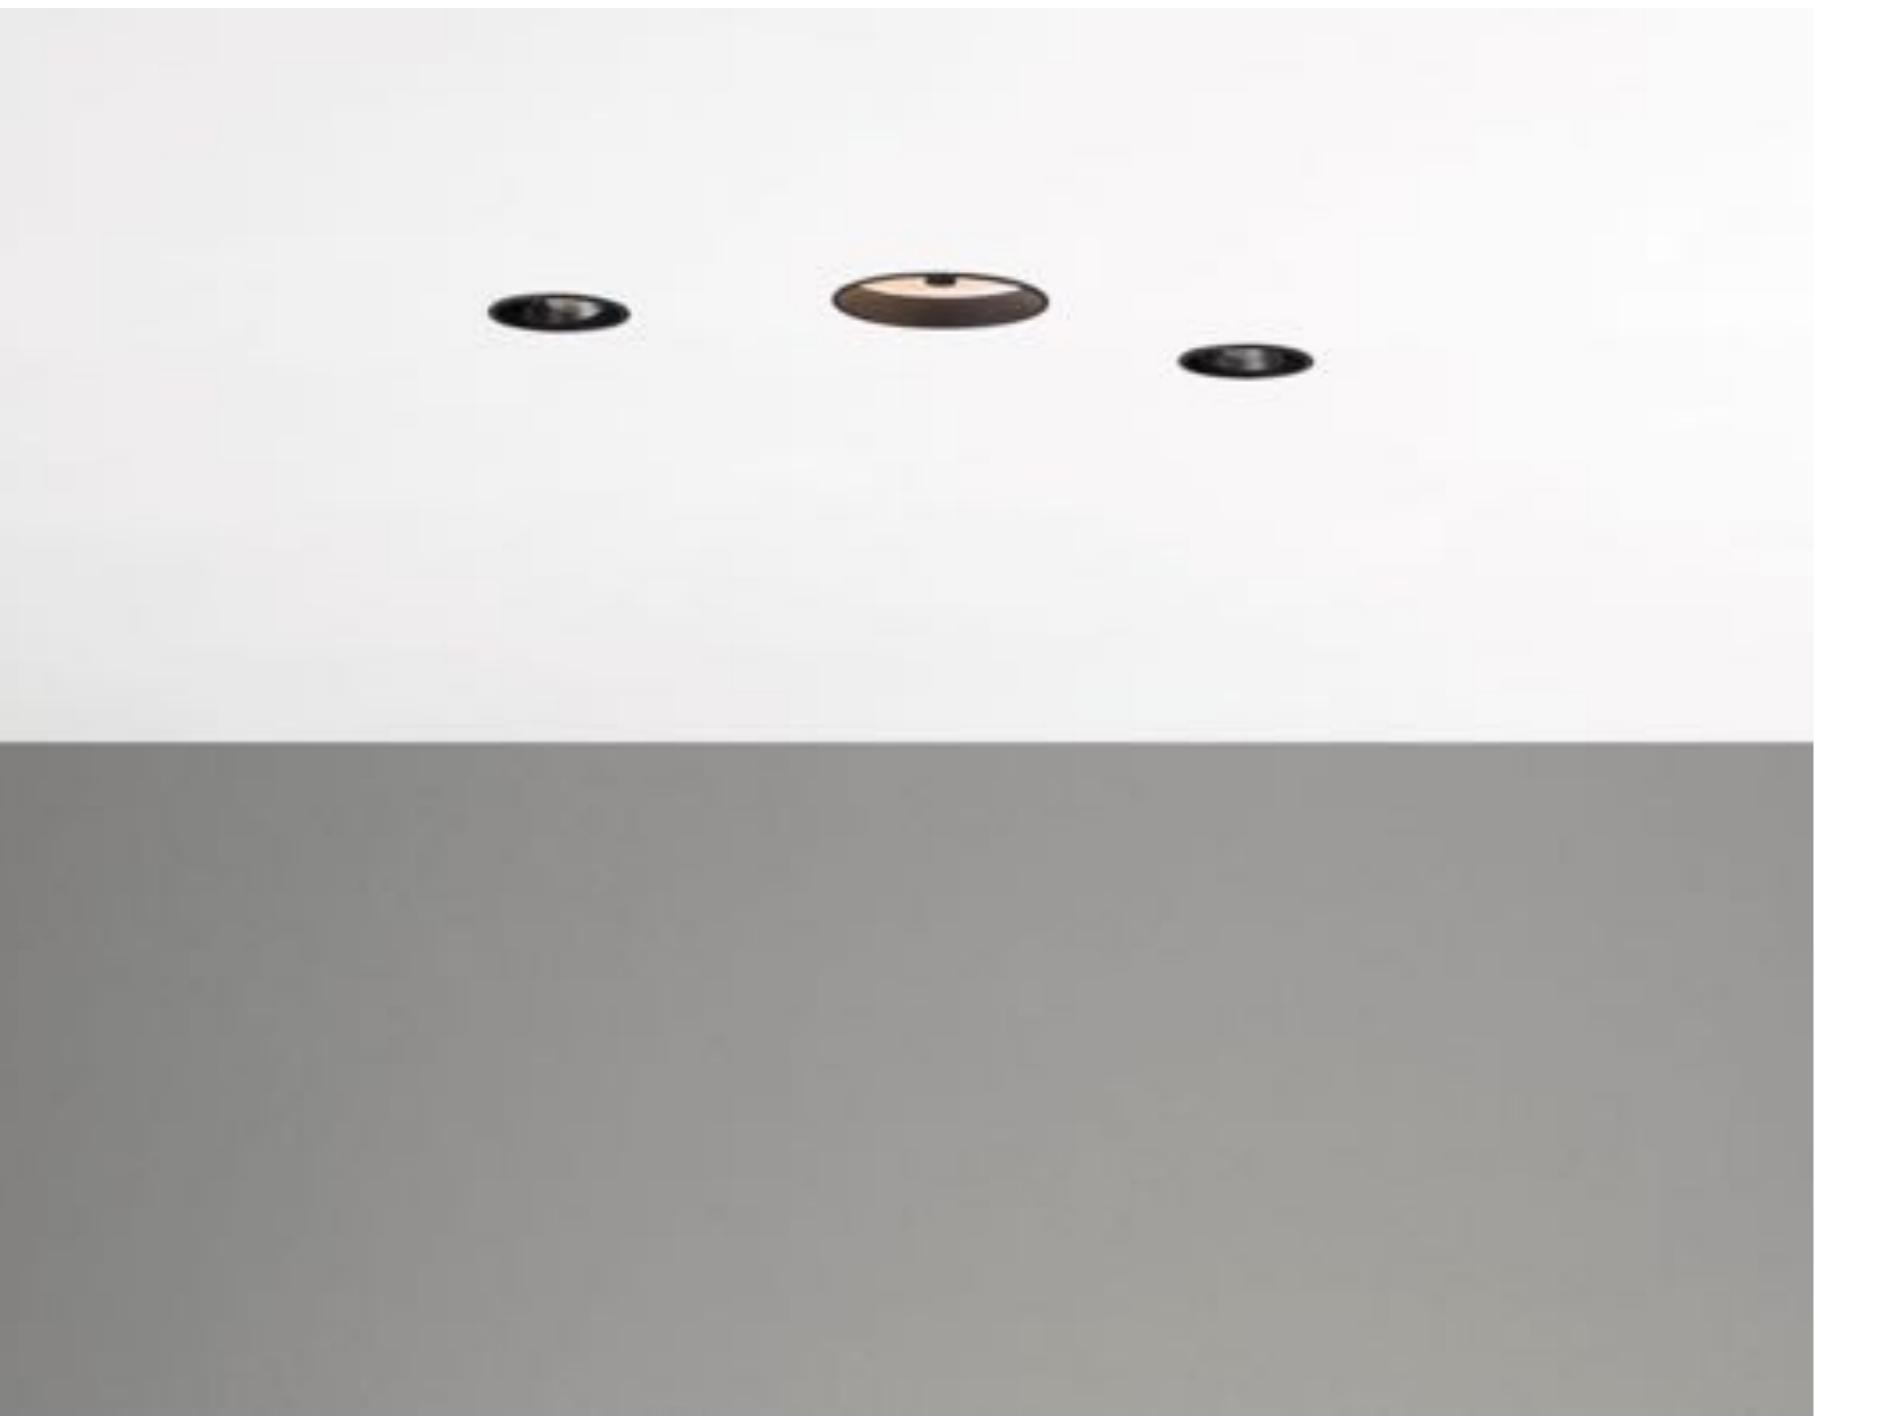

### ADJUSTABLE LIGHTING ANGLE

The light's design makes it possible to set the lighting angle in the range of 8° to 40°. The glass lens, placed in a special ring, can be turned, which enables framing particular objects. The turning action is smooth while the framing adjustment resembles setting camera lens sharpness. For more information on the lenses please go to page 16.

# Maxime IN

Maxime is an exceptional line of products, whose task is to limit glare to the biggest possible extent while retaining the highest parameters of light quality. All luminaires in this line feature light sources slightly moved back into the body. They look superb fitted as single units or more sophisticated light installations. The stylistically coherent line allows a choice of luminaires with various light sources.

**APPLICATION:** Basic, complementary, and spot lighting. It will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

# Minus

The line offers a possibility of creating interesting arrangements by fitting the lights one close to another, which makes them perfect as lighting installations emphasising interiors' décor. Lights providing both diffused and focused light can be combined as elements of a single line of products. Minus lights feature a built-in LED light source with top-notch parameters and a prism shade diffusing light at the angle of 60° and providing maximum glare reduction.

**APPLICATION:** Basic and complementary lighting. It will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

# Minus L

Minus L is a medium-output spotlight with adjustable lighting direction and angle (from 15° do 50°). When the spotlight is oriented downwards, the light is equipped with a diffuser screen covering the inside of its casing. When the light changes its direction, the diffuser screen does so as well, thus dynamically changing the light's shape.

**APPLICATION:** Basic, complementary, and spot lighting. It will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

## ADJUSTABLE LIGHTING ANGLE

The light's design makes it possible to set the lighting angle in the range of 15° to 50°. The glass lens, placed in a special ring, can be turned, which enables framing particular objects. The turning action is smooth while the framing adjustment resembles setting camera lens sharpness. For more information on the lenses please go to page 16.

## Minus XL

Our luminaires Minus XL and Minus XXL combine the functions of general and spot lighting. The line module applied in these products, covered by a prism diffuser screen, diffuses light at the angle of 60° while ensuring maximum glare reduction. The glass lens allows adjusting the lighting angle in the range of 15° to 50°. This universal solution guarantees optimal lighting for surfaces while making it possible to frame selected elements of décor or parts of the interior.

**APPLICATION:** Basic, complementary, and spot lighting. It will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

### LENS

The glass lens, placed in a special ring, can be turned, which enables framing particular objects with light.

### PRISM DIFFUSER SCREEN

The prism diffuser screen, absorbing approx. 10% of light and diffusing it at the angle of 60°, enables focusing the whole lighting output on a single object (e.g. a table top or desk). Dedicated to offices and workrooms.

# Myco IN

One family of luminaires and various ways of lighting. This is the simplest way to describe the Myco IN line. A combination of focused and diffused light with the advantage of spotlights. The various sizes of the luminaires and different ways of lighting help create the interior's climate. Exceptionally easy to fit.

APPLICATION: General and spot lighting. The luminaires will work perfectly at hotels, in art galleries, museums, or restaurants.

THE LUMINOUS FLUX DATA DOES NOT ALLOW FOR A DIFFUSER SCREEN

THE LIGHT REQUIRES A POWER SUPPLY UNIT, P. 329

## DIFFUSER SCREENS

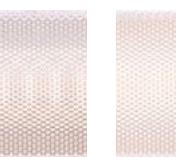

Luminaire available with three types of diffuser screen: SOFT, PR, oraz SPR. Please go to page 17 for more information.

# Pick Me

Pick Me is a line of lights featuring reduced glare, thanks to the light source slightly moved back into the body, and a wide lighting angle. Its distinctive design makes it possible to use it to create interesting arrangements of the ceiling. The lens diffuses light at the angle of 60° ensuring a perfect patch of light. The product line offers a choice of two diameters and as many as four lighting output options.

**APPLICATION:** General lighting. It will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

## EASY INSTALLATION.

It takes 15 minutes to fit Pick Me. Thanks to a special system of electrical couplings, it is possible to connect the supply conductors to the power supply unit in a screw-less manner, which will ensure operational safety for many years. The conductor can be repeatedly put in and out without compromising the operational safety and a risk of damaging the luminaire - it's enough to press the flexible outlet next to the socket.

THE LIGHT REQUIRES A POWER SUPPLY UNIT, P. 329

# Thiny Slim RT

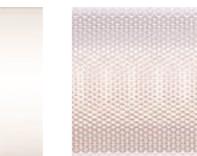

INDEX: 41.3101.Cx6  
—> 1 – SOFT / 2 – PR / 3 – SPR

Modern architecture requires innovative and simple solutions. Thiny Slim RT makes it possible to easily design light lines with invisible frames.

APPLICATION: Basic and complementary lighting. It will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

#### EASY INSTALLATION

Fitting one frame to Thiny Slim RT takes up to than 30 minutes and not more than an hour including finishing work and painting. Due to the process of surfacer drying, full surface finishing takes up to 48 hours. After the process finishes, it's enough to fit the luminaire into the recess (photo 2).

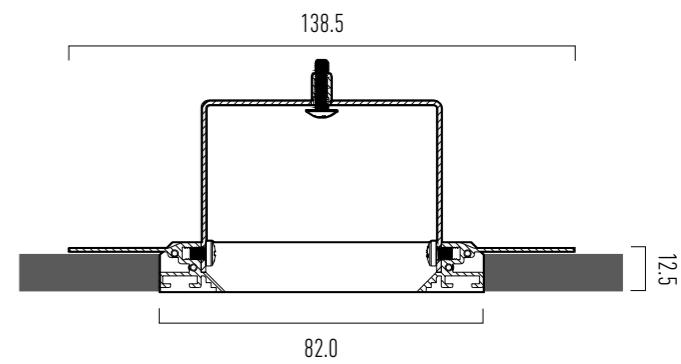

Fot 1. Thiny Slim RT before finishing work

Fot 2. Thiny Slim RT after finishing work

#### HOLDERS

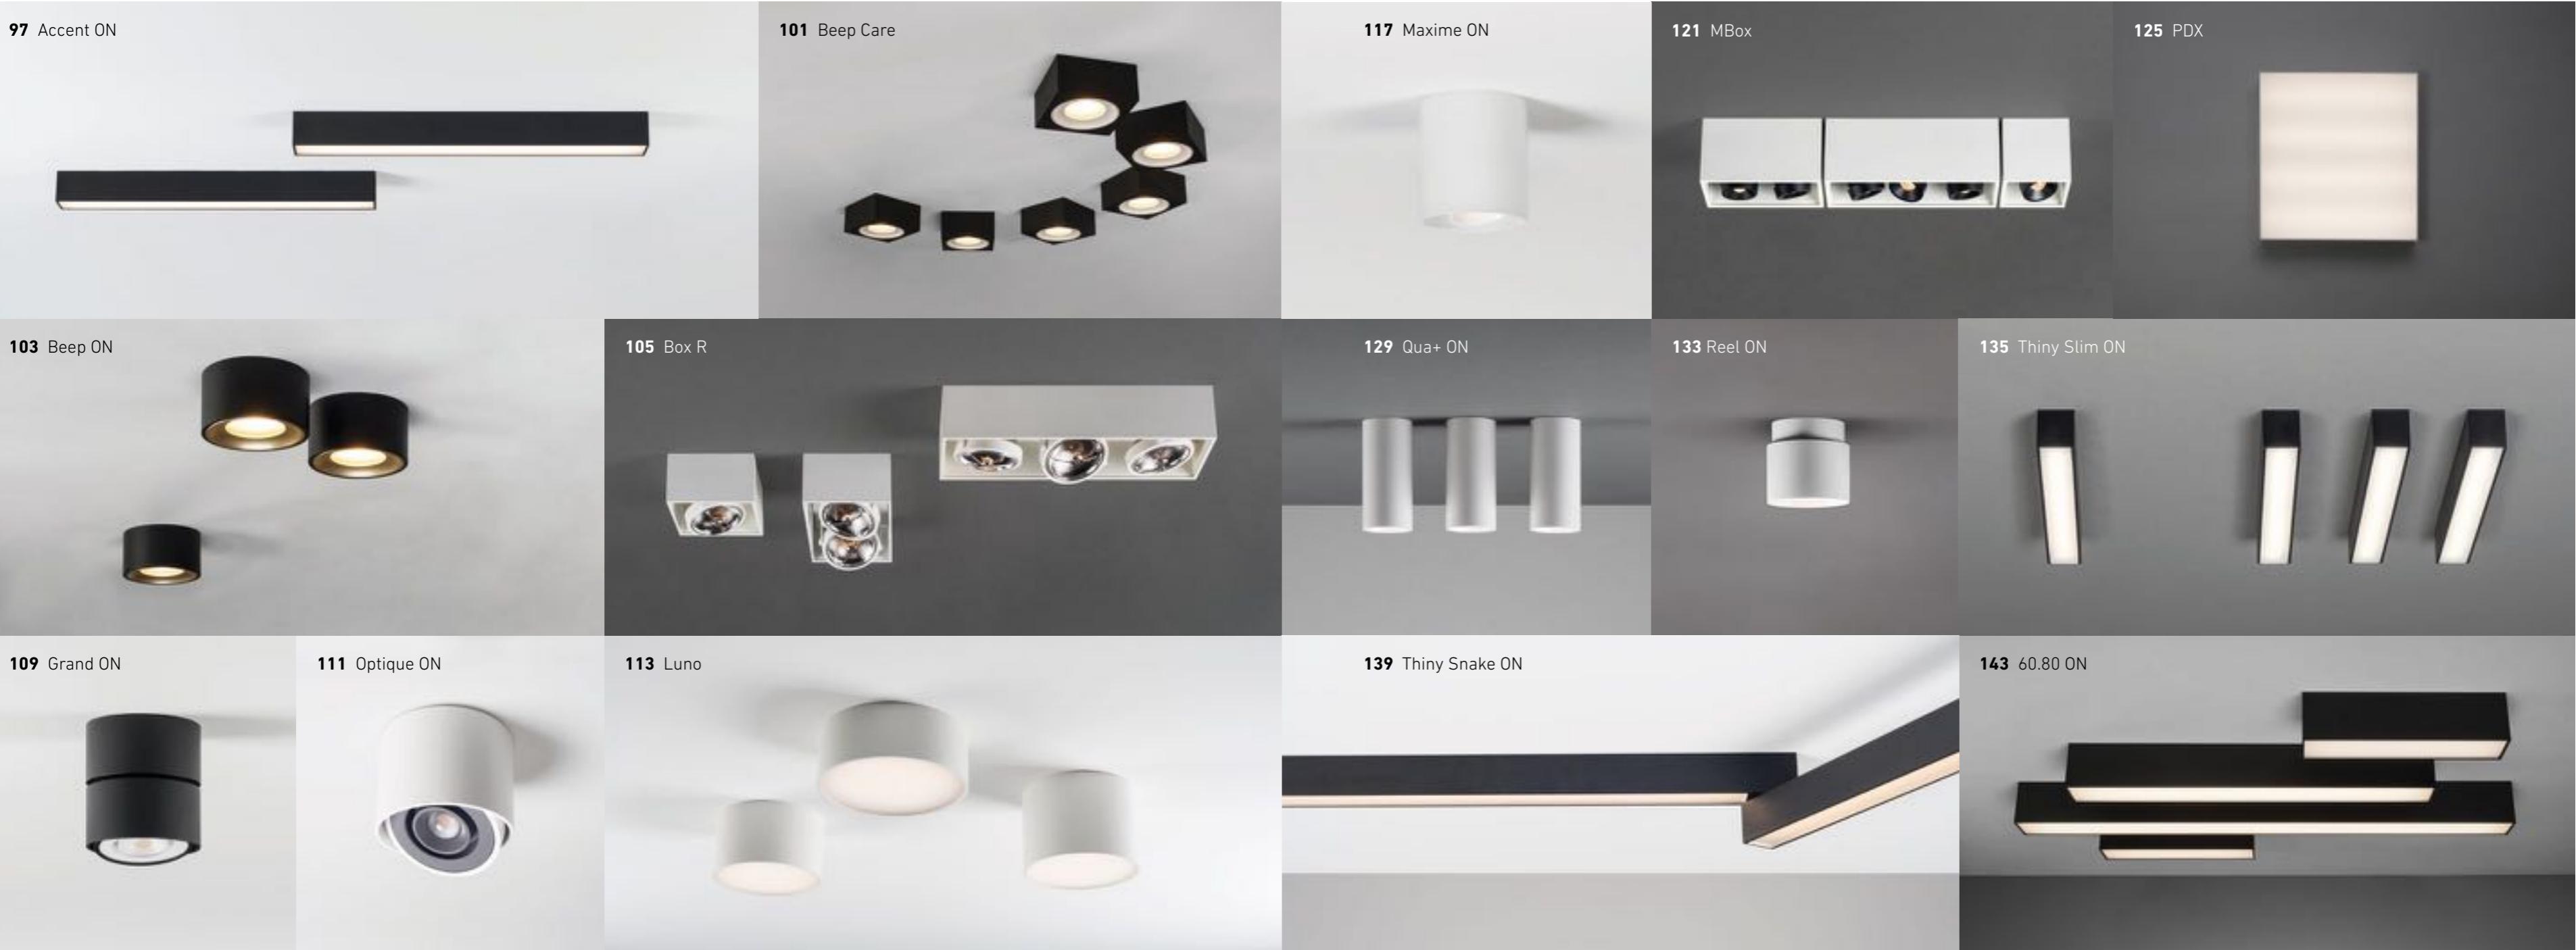

The construction is rigid, which facilitates installation. The holders adjusted to the luminaire's height enable fitting and unfitting it while leaving the ceiling surface intact. The system requires application of a 12.5 mm panel, which is standard in the construction industry.

## Surface mounted

Luminaires designed to be fitted directly on the ceiling surface. Classic and austere in terms of appearance, they will work perfectly wherever stunning and modern design is one of the priorities. They go exceptionally well with office spaces, lounges, hallways, and sitting rooms, providing unique decoration.

# Accent ON

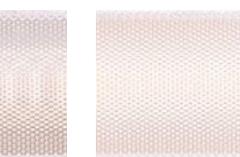

Lighting

A surface-mounted light providing evenly distributed and natural light. Its simple and subtle design will make it the dominating interior feature. The availability of various diffuser screens makes it cater to users' individual needs.

APPLICATION: General lighting. It will work perfectly in residential interiors, offices, conference rooms, or hallways.

## DIFFUSER SCREENS

# Beep Care

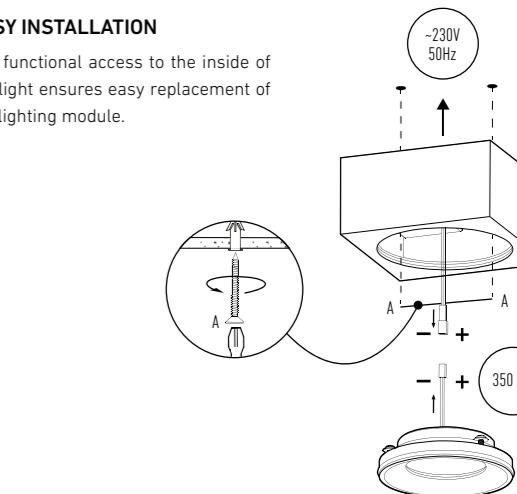

Beep Care are simple lights featuring an efficient 6 W LED source (output equivalent to that of a 50W halogen bulb). The luminaire's increased tightness (IP65) and low-voltage power supply unit make it perfect for applications in interiors with high humidity levels. In other interiors, they can serve as subtle-looking plafonds.

**APPLICATION:** Basic lighting. Beep Care will work perfectly as lighting for bathrooms, terraces, elevations, and hallways, but also in business establishments such as offices, clubs, galleries, and hotels.

## EASY INSTALLATION

The functional access to the inside of the light ensures easy replacement of the lighting module.

	INDEX	SOURCE / OUTPUT	ENERGY GRADE	LUMINOUS FLUX	ANGLE	LIGHT COLOUR	DIMMING	POWER SUPPLY

## Box R

Our Box R line means simple designs which won't be a dominant interior feature. The ring applied for the design allows a full range of motion and a possibility of using different light sources, which lend a special character to the luminaire, making it particularly interesting. Already when purchasing the luminaire, the client must choose either the version supporting halogen lights or LED substitutes, or the one expanded by a Lightpro module (p. 19), which becomes an integral part of the light - ensuring adjustable lighting angle in the range of 15° to 50°.

**APPLICATION:** Basic, complementary, and spot lighting. It will work perfectly at establishments such as clubs, galleries, hotels, but also as lighting for the office and home.

# Grand ON

Grand ON is a classic item in the range surface-mounted luminaires. It features a special case that facilitates directing light by turning the ring as well as a possibility of moving the light's body. This facilitates the selection of luminaires to cater for the needs of a given interior, while the possibility of different light sources makes it very versatile. Already when purchasing the luminaire, the client can choose either the version supporting halogen lights or LED substitutes, or the one expanded by a Light Engine (see page 19), which becomes an integral part of the light - ensuring adjustable lighting angle in the range of 0-120°.

**APPLICATION:** Basic, complementary, and spot lighting. It will work perfectly at establishments, galleries, and hotels, but also as lighting for the office and home.

# Optique ON

The luminaires, featuring a simple and minimalist design and precise workmanship as well as no visible installation screws, offer a possibility of using various light sources. The client can choose either the version supporting halogen lights or LED substitutes, or the one expanded by a Lightpro module (p. 19), which becomes an integral part of the light - ensuring adjustable lighting angle in the range of 15° to 50°.

**APPLICATION:** Basic, complementary, and spot lighting. The luminaires will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

# Luno

Luno's simplicity will go well with every kind of interior style, be it traditional, modern, or austere. Luno are plafonds with a high quality integrated LED source featuring a high colour rendering index CRI≥95. The lack of visible installation screws emphasises the luminaires' minimalist design, while the increased tightness of IP44 enables the use of the lights in a bathroom or terrace. The milk white diffuser screen featuring a sandblasted glass structure provides soft, pleasant and evenly distributed light while eliminating glare. The two available diameters and three heights enable creating interesting arrangements on the ceiling.

**APPLICATION:** Basic, complementary, and spot lighting. It will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home (also in the bathroom).

# MBox

MBox is a line of luminaires featuring a subtle and minimalist design without visible installation screws, dedicated for mounting on the ceiling. Available as an option for a GU10 light source or with an integrated LED module. The luminaire offers a possibility of setting lighting direction and (version with an integrated LED light) angle of in the range of 8° to 40°. The built-in power supply unit prevents the strobe effect, while its quick release coupling system facilitates installation.

**APPLICATION:** Wherever a source of focused light is needed. It will work perfectly at establishments such as clubs, galleries, hotels, but also as lighting for the office and home.

## ADJUSTABLE LIGHTING ANGLE

The light's design makes it possible to set the lighting angle in the range of 8° to 40°. The glass lens, placed in a special ring, can be turned, which enables framing particular objects. The turning action is smooth while the framing adjustment resembles setting camera lens sharpness. For more information on the lenses please go to page 16.

## Qua+ ON

The simple design, undisturbed by any installation elements, as well as the attention to workmanship detail are what makes Qua+ ON stand out. The light is available in versions for halogen bulbs and highest quality integrated LED sources. The light source is slightly moved back into the luminaire body, which prevents glare, while the element surrounding it is available in colours different than the other parts of the luminaire. The various heights of the luminaire enable the creation of interesting arrangements emphasising the character of the interior.

**APPLICATION:** Basic, complementary, and spot lighting. It will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

#### LED LIGHT

The LED light source slightly moved back into the luminaire body and the glass lens applied guarantee the best light distribution. The luminaire design allows lighting at 60° while preventing glare. The light source element can come in a colour different than the luminaire body.

#### HALOGEN LIGHT

To those who prefer halogen light, we offer a version for the GU10 bulbs. The ring holding the light source can come in a colour different than the luminaire body.

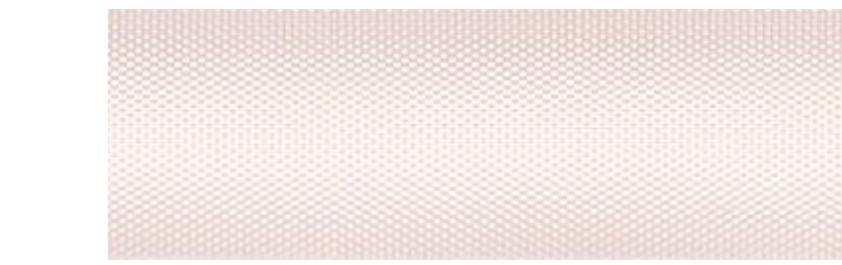

## Reel ON

Reel On is a surface mounted luminaire whose unique design was developed by Fabian Baumann from the Berlin based design studio Formfjord. The light source slightly moved back into the luminaire body and the soft prism applied reduce glare while softening light and pleasantly diffusing it in the interior.

**APPLICATION:** Complementary general lighting as well as spot lighting. It will work perfectly at establishments such as restaurants, galleries, and hotels, but also as lighting for the office and home.

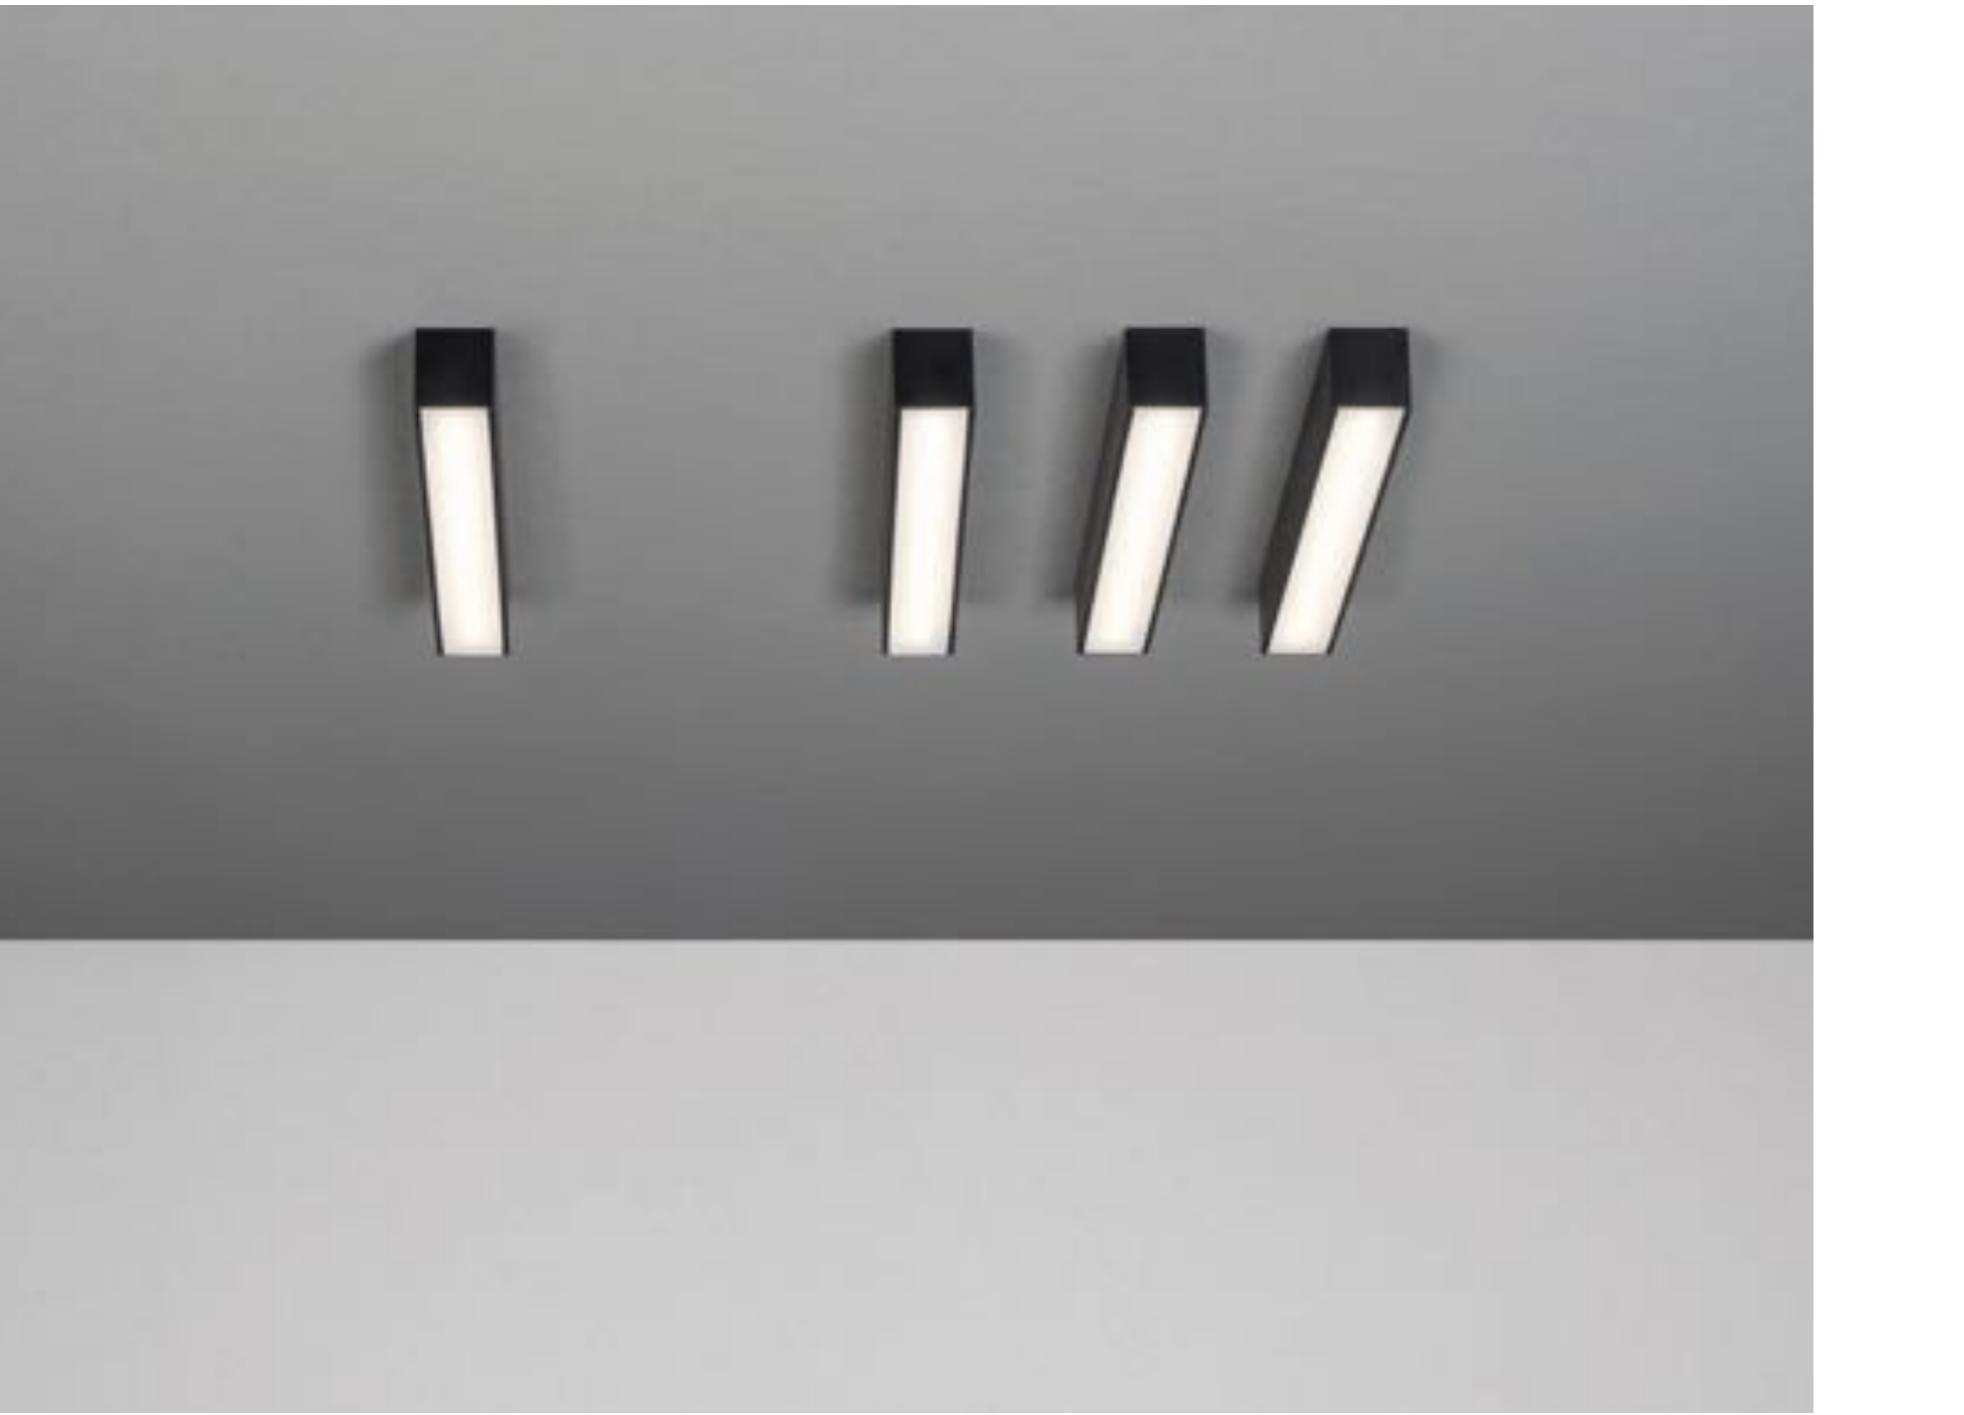

### SPR DIFFUSER SCREEN

A new type of a prism diffuser screen, which absorbs only 10% of light while retaining the unified glare rate UGR≤19%. Its special structure makes single LED's invisible, which considerably reduces glare and improves the user's comfort of work and concentration.

# Thiny Slim ON

Thiny Slim ON is a surface mounted luminaire providing direct light. It will ensure evenly distributed lighting in the kitchen, entrance hall, or an office. Its simple and compact design makes it look superb also in small interiors.

APPLICATION: General lighting. It will work perfectly as lighting for offices, conference rooms, hallways, and residential spaces.

# Thiny Snake ON

Thiny Snake ON is a solution for those who enjoy playing with the form. The connection system makes it possible to bend the luminaire in different directions, which provides many possibilities of creating the interior's character allowing the luminaire itself to become an interesting architectural feature. Thiny Snake ON modules can be connected and diversified in terms of colour.

**APPLICATION:** Basic and complementary lighting. It will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

## Wall mounted

Luminaires designed to be fitted on the wall surface. Matching every style and type of interior décor, they are used to provide accent lighting. They are the mood-building part of the general lighting.

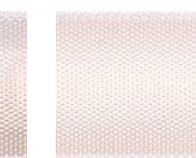

# Accent K

Accent K is a simple solution for the purposes of general lighting which will work perfectly as an illumination accent for mirrors or paintings. Depending on where it is placed, it will enable direct or indirect lighting.

APPLICATION: General lighting. Accent K will work perfectly in offices, conference rooms, and hallways.

## DIFFUSER SCREENS

Luminaire available with three types of diffuser screen: SOFT, PR, oraz SPR. Please go to page 17 for more information.

# Ambiente K

Ambiente K was created as a result of cooperation between the CHORS brand and Piotr Kalinowski (Modelista). There is no doubt that it draws attention from the first sight as a beautiful decoration of the interior. It could easily replace a painting or sculpture while providing delicate, pleasant and very atmospheric light.

**APPLICATION:** Complementary and decorative lighting. It will perfectly complement the atmosphere of a bedroom, sitting room, or a hallway, as well as an office, club, gallery, or a hotel.

# Backlight K

Backlit K is a wall mounted luminaire providing a very interesting effect while remaining simple and pure in terms of design. Reflected light doesn't prevail in the interior, illuminating it with a glow that is pleasing to the eye. The luminaire works perfectly as a source of decorative light or accent lighting for paintings. Backlight+ luminaires come in lengths adjusted to standard widths of bed frames. The spotlights fitted at their ends will provide complementary lighting for bedtime reading.

**APPLICATION:** Complementary and spot lighting. Backlit K will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

## ADJUSTABLE LIGHTING ANGLE

The light's design makes it possible to set the lighting angle in the range of 8° to 40°. For more information on the lenses please go to page 16.

## Coro IN

Coro is the Italian word for choir. Our Coro IN line luminaires were designed to be used alongside each other. They will work perfectly in interiors as sources of floor lighting, night time lighting for stairs, as decoration. The installation method is determined by the lighting direction.

APPLICATION: Decorative; illumination of stars at home, as well as in offices and restaurants.

# Flask K

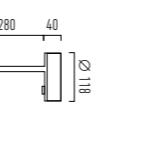

Flask K are spotlights perfect for illuminating paintings, which is owed to their elongated arms and subtle design. Thanks to their high quality and integrated LED light source, the luminaires provide natural light in interiors, while a special lens enables adjusting the lighting angle in the range of 8° to 40°.

**APPLICATION:** Basic, complementary and spot lighting. Flask K will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

## ADJUSTABLE LIGHTING ANGLE

The light's design makes it possible to set the lighting angle in the range of 8° to 40°. The glass lens, placed in a special ring, can be turned, which enables framing particular objects. The turning action is smooth while the framing adjustment resembles setting camera lens sharpness. For more information on the lenses please go to page 16.

# Hello

Luminaires designed for wall mounting, combining a general lighting module with a spotlight featuring an adjustable lens. A perfect solution for those looking for interesting bedside lighting ideas. When two circuits are used, both light sources can operate independently. Version A is equipped with an infrared switch. It's enough to move your palm closer to it to turn the light on or off.

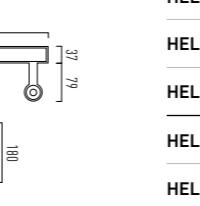

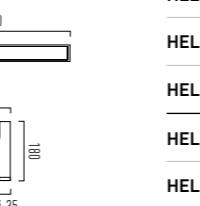

## ADJUSTABLE LIGHTING ANGLE

APPLICATION: Basic, complementary, and spot lighting. Hello will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

The light's design makes it possible to set the lighting angle in the range of 8° to 40°. The glass lens, placed in a special ring, can be turned, which enables framing particular objects. The turning action is smooth while the framing adjustment resembles setting camera lens sharpness. For more information on the lenses please go to page 16.

# illu

The remarkable design of the wall mounted luminaire illu will capture the on-looker's attention. The moving element provides enormous arrangement possibilities as well as great flexibility in directing reflected light to create interior moods. The replaceable panel can come in a colour different than the luminaire body.

**APPLICATION:** Complementary lighting. It will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

## Luno K

Luno K is a wall-mounted luminaire providing light that is diffused and very pleasing to the eye. It performs well when lighting a mirror or in a hallway, but also as an element of a living room's décor. The high quality LED applied as its light source provides eye-pleasing illumination. If placed on the ceiling, it will fill the interior with indirect light while creating an illusion of bigger size.

**APPLICATION:** Complementary lighting. It will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

## Moi C

Moi C is a wall recessed luminaire which, thanks to its compact size and minimalist form, takes up little space while providing optimum lighting for reading with its mobile arm and optical lens for adjusting the lighting angle. Also available is a version with a touchless switch. To switch the light on or off, you just need to move your palm closer to the luminaire.

**APPLICATION:** Spot and wall mounted lighting. The luminaires will work perfectly at hotels, in art galleries, museums or restaurants, but also in residential spaces, as bedside lighting solutions.

Also available is an ON version, dedicated to mounting on the ceiling or a wall.

Version A is equipped with an infrared switch. It's enough to move your palm closer to the luminaire to turn it on or off.

Private owner's interior in Wrocław

# Myco K

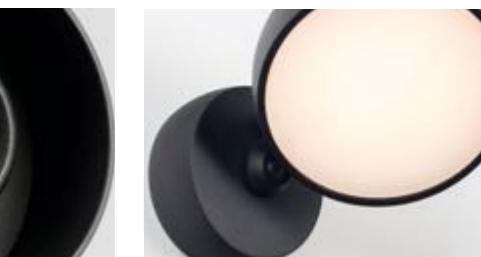

Myco K means various ways of lighting within a single family of luminaires. A combination of focused and diffused light with the advantage of spotlights. Thanks to their varied shapes, you can let your imagination run free and create a unique interior. They are a universal solution which will work perfectly as a source of bedside lighting or illumination for a mirror or halls and corridors.

**APPLICATION:** Basic, complementary and spotlighting. Myco K will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

**LENS**

The light's design makes it possible to set the lighting angle in the range of 15° to 50°. The glass lens, placed in a special ring, can be turned, which enables framing particular objects with light.

**SOFT DIFFUSER SCREEN**

The milk white diffuser screen ensures even distribution of light in the entire interior. Recommended for general lighting.

## LIGHTING DIRECTION ADJUSTMENT

The special design using a ball-and-socket joint enables free lighting direction adjustment.

# Ocu

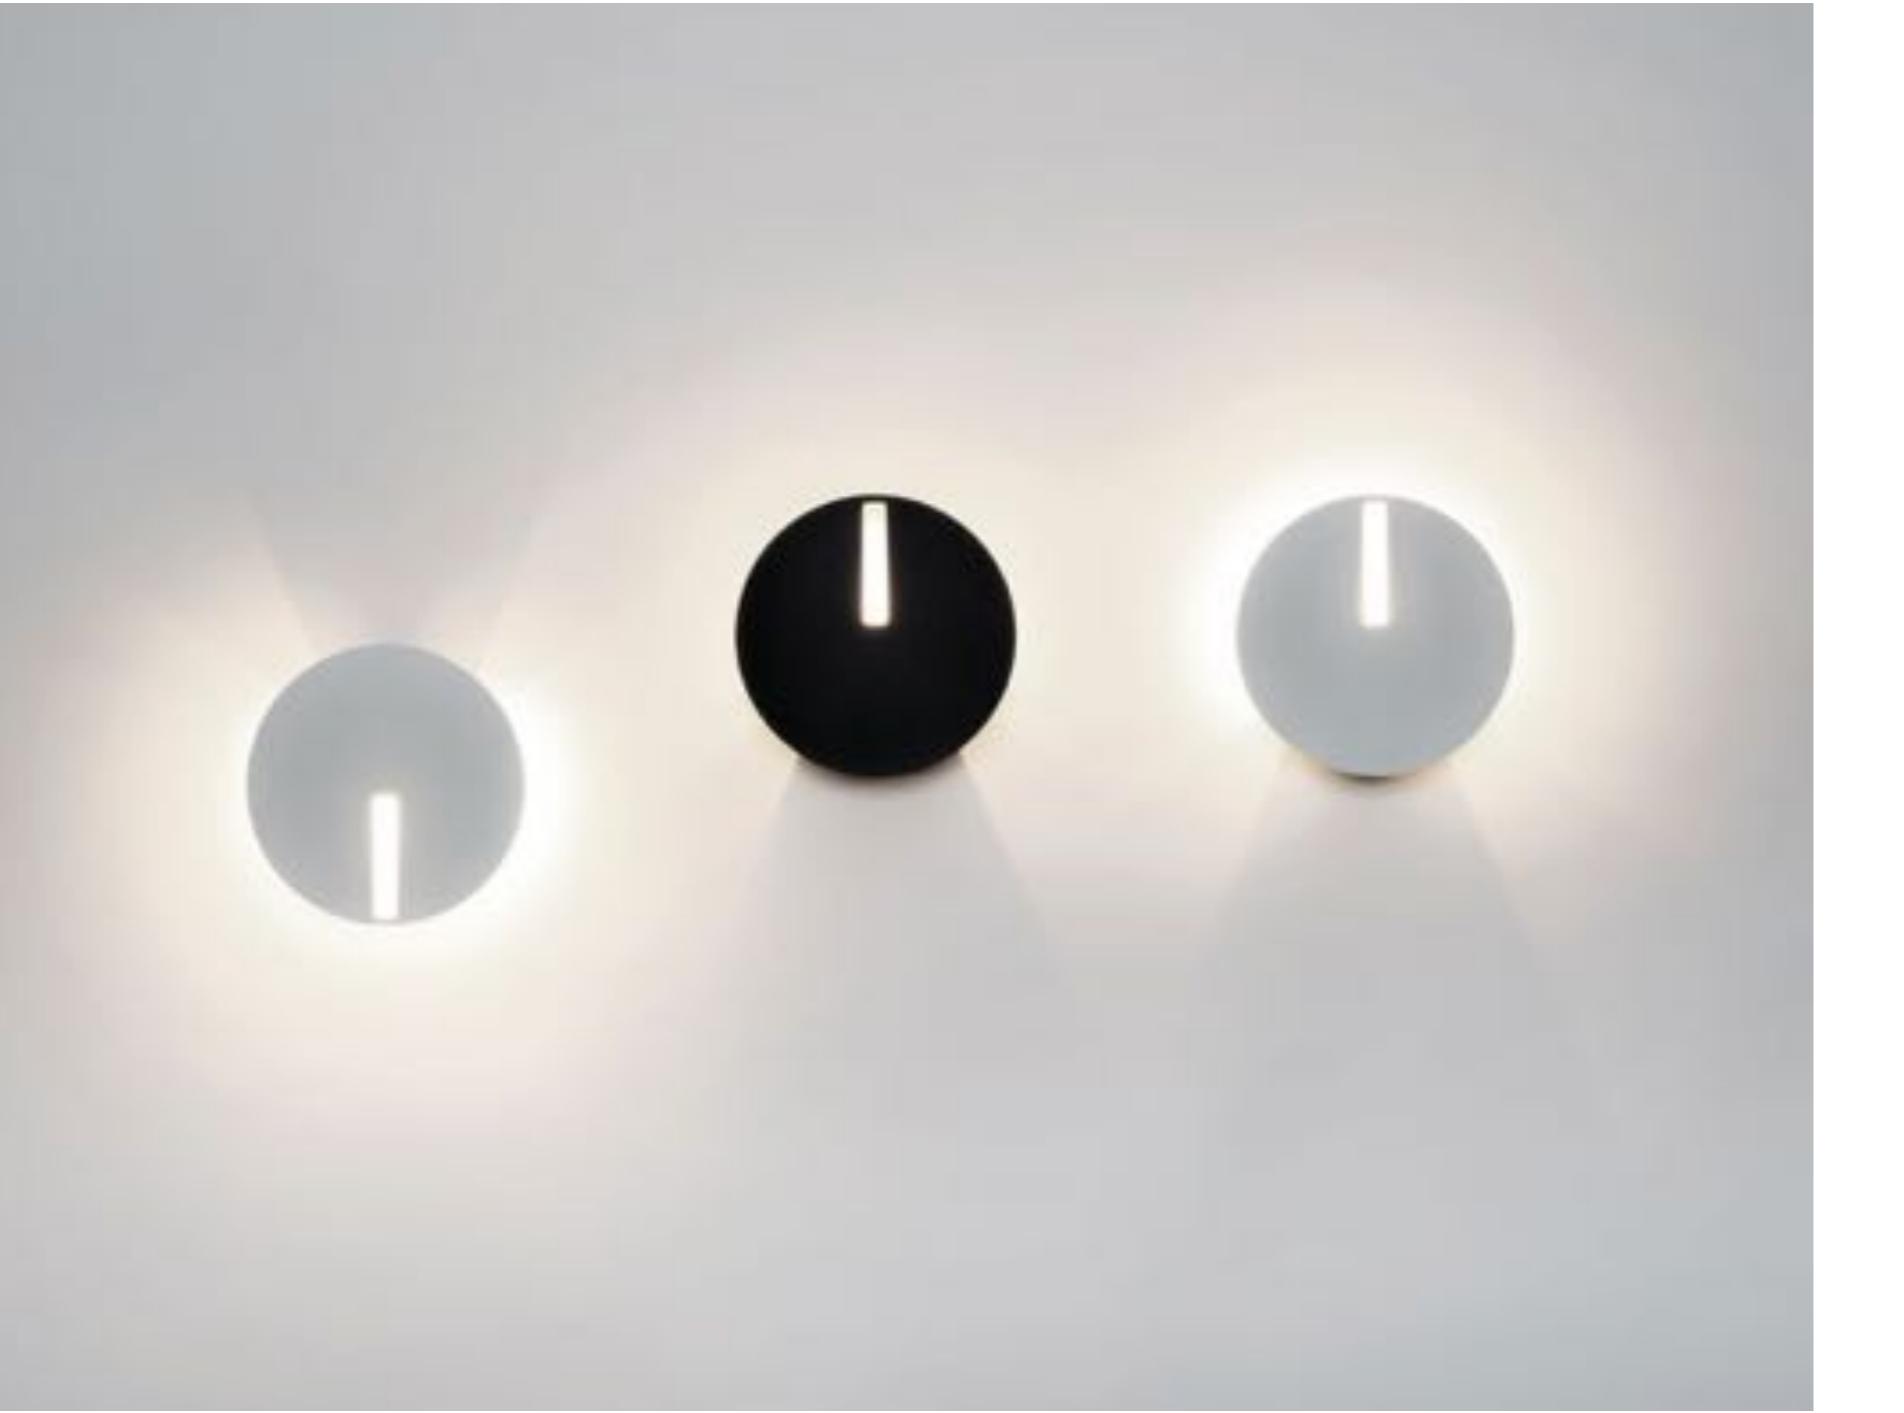

Ocu are recessed luminaires designed to be used as night-time lighting or, alternatively, a source of stair illumination. The small diameter of the luminaire makes it easier to use in interior arrangements, while the way it performs allows interesting results. The installation of the luminaire involves the use of a standard cable box.

APPLICATION: Complementary and spotighting. Ocu will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

# Orionis

Luminaire designed by Magdalena Klimas. Orionis K is a wall mounted luminaire providing strong LED light reflected from the wall. Thanks to its design, light is diffused in an intriguing way, which provides a decorative effect. The large amount of light it produces and the little heat given up mean that it can be placed on wooden or wallpaper-covered walls.

APPLICATION: Complementary lighting. Orionis will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

# Plus K

Plus K is a medium-output wall mounted luminaire with adjustable lighting direction and angle (from 15° to 50°). When the spotlight is oriented downwards, the light is equipped with a diffuser screen covering the inside of its casing. When the light changes its direction, the diffuser screen does so as well, thus dynamically changing the shape of light.

**APPLICATION:** Complementary and spotighting. It will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

## ADJUSTABLE LIGHTING ANGLE

The light's design makes it possible to set the lighting angle in the range of 15° to 50°. The glass lens, placed in a special ring, can be turned, which enables framing particular objects. The turning action is smooth while the framing adjustment resembles setting camera lens sharpness. For more information on the lenses please go to page 16.

## Ra IN

Our RA IN line of luminaires offers wall-recessed light reflected from an adjustable disc. By changing its position, you alter the direction in which light is reflected. The luminaire can be mounted on a wall or suspended ceiling, while the availability of various sizes facilitates making it match the size of the interior. An interesting lighting solution for a bedroom that makes it possible to avoid using direct light.

**APPLICATION:** Basic and complementary lighting. Ra IN will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

## Reel K

The Reel K wall luminaire is an outcome of our cooperation with the Berlin based Formfjord design studio and a complement to the spotlight luminaire line. The shapely lightshade and bent tube arm give it a classic form that perfectly matches modern interiors.

**APPLICATION:** Basic and complementary lighting. It will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

# Thiny Snake K

Thiny Snake K is a solution for those who enjoy playing with the form. Combining modules of various lengths in a few colours will enable creation of an interior with an individual character.

**APPLICATION:** Basic and complementary lighting. It will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

## DIFFUSER SCREENS

Luminaire available with three types of diffuser screen: SOFT, PR, oraz SPR. Please go to page 17 for more information.

# Spotlights

Luminaires designed to be mounted on walls, ceilings or tracks. They allow even distribution of light in the interior, but also - thanks to the focused light and the adjustable lighting angle - offer a possibility of emphasising selected interior elements.

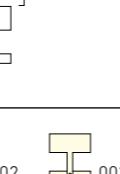

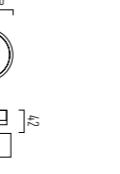

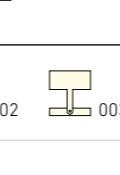

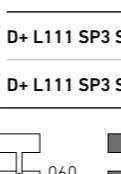

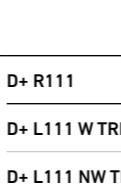

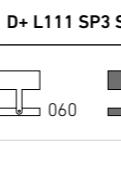

# D+ 111 / D+ 111 SP3

D+ is a line of spotlights designed to be mounted on the ceiling. Thanks to the fully adjustable lighting direction, D+ makes it possible to play with light and focus it according to needs of use. Various light sources can be used with it. Already when purchasing the luminaire, the client must choose either the version supporting halogen lights or LED substitutes, or the one expanded by a Lightpro module (p. 19), which becomes an integral part of the light - ensuring adjustable lighting angle in the range of 15° to 50°.

**APPLICATION:** Basic, complementary, and spot lighting. The luminaires will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

# Flask ON

Flask On are spotlights equipped with an integrated high quality LED light source. Featuring a subtle and slender design, they will provide natural lighting of the interior. Thanks to a special lens, their lighting angle can be adjusted in the range of 8° to 40°. The elongated arm makes it perfect for illuminating a painting or a chosen interior element to emphasise the positive aspects of its look.

**APPLICATION:** Basic, complementary, and spot lighting. The luminaires will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

## ADJUSTABLE LIGHTING ANGLE

The light's design makes it possible to set the lighting angle in the range of 8° to 40°. The glass lens, placed in a special ring, can be turned, which enables framing particular objects. The turning action is smooth while the framing adjustment resembles setting camera lens sharpness. For more information on the lenses please go to page 16.

# Maia ON / Maia SP3

Maia ON is a surface mounted luminaire designed by BUCK.STUDIO. Two versions are available - featuring one or two light sources. The spotlight's slender form and subtle simplicity will discreetly make its presence felt in the interior. The high quality integrated and energy-efficient LED light source provides natural-looking colours. Its optical lens enables shifting the lighting angle between 8° and 40°.

**APPLICATION:** Basic, complementary, and spot lighting. The luminaires will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

#### LENS

The light's design makes it possible to adjust the lighting angle in the range of 15° to 50°. The glass lens, placed in a special ring, can be turned, which enables framing particular objects with light.

#### SOFT DIFFUSER SCREEN

The milk white diffuser screen ensures even distribution of light in the entire interior. Recommended for general lighting.

#### ADJUSTMENT OF LIGHTING DIRECTION

Our Myco spotlights enable free adjustment of lighting direction. Depending on the luminaire's diameter, you can choose focused or diffused light, or high output diffused light, which enables playing with light and creation of space with individual needs in mind.

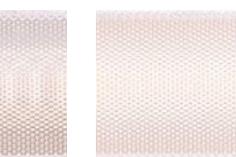

## Myco SP3

Myco SP3 means various ways of lighting within a single family of luminaires. A combination of focused and diffused light with the advantage of spotlights. Thanks to their varied shapes, you can let your imagination run free and create a unique interior. Version designed for fitting on a track.

**APPLICATION:** Basic, complementary, and spot lighting. The luminaires will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

### DIFFUSER SCREENS

Luminaire available with three types of diffuser screen: SOFT, PR, oraz SPR. Please go to page 17 for more information.

## Optique ON SP3

The luminaires, featuring a simple and minimalist design and precise workmanship as well as no visible installation screws, offer a possibility of using various light sources. The client can choose either the version supporting halogen lights or LED substitutes, or the one expanded by a Lightpro module (p. 19), which becomes an integral part of the light - ensuring adjustable lighting angle in the range of 15° to 50°.

**APPLICATION:** Basic, complementary, and spot lighting. The luminaires will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

## Plus ON / Plus SP3

Plus ON is a medium-output spotlight with adjustable lighting direction and angle (from 15° do 50°). When the spotlight is oriented downwards, the light is equipped with a diffuser screen covering the inside of its casing. When the light changes its direction, the diffuser screen does so as well, thus dynamically changing the light's shape.

**APPLICATION:** Basic, complementary, and spot lighting. It will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

#### ADJUSTABLE LIGHTING ANGLE

The light's design makes it possible to adjust the lighting angle in the range of 15° to 50°. The glass lens, placed in a special ring, can be turned, which enables framing particular objects. The turning action is smooth while the framing adjustment resembles setting camera lens sharpness. The high quality glass lens reduces glare, softens light and prevents its distortion.

	<b>PLUS L21 SP3 W TRIAC</b>	48.5102.D66.	LED 2 x 12,8 W	A++	2 x 1114 lm	15-50°	2700 K CRI≥90	TRIAC	230 V 50 Hz

## Qua+ R ON

A simple spotlight featuring an integrated LED light source or a GU10 halogen. It works perfectly providing ceiling illumination or as a source of light for the bedroom, e.g. when mounted by the bed. The reflector moving the light source back can come in a different colour.

APPLICATION: Complementary and spot lighting. The luminaire will work perfectly in the bedroom, but also in clubs, restaurants, and offices.

INDEX	SOURCE / OUTPUT	ENERGY GRADE	LUMINOUS FLUX	ANGLE	LIGHT COLOUR	DIMMING	POWER SUPPLY

## Qua+ R SP3

A simple spotlight featuring an integrated LED light source or a GU10 halogen. It works perfectly providing ceiling illumination or as a source of light for the bedroom, e.g. when mounted by the bed. The reflector moving the light source back can come in a different colour.

**APPLICATION:** Complementary and spot lighting. The luminaire will work perfectly in the bedroom, but also in clubs, restaurants, and offices.

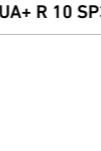

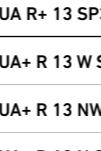

**HALOGEN LIGHT**

To those who prefer halogen light, we offer a version for the GU10 bulbs. The ring holding the light source can come in a colour different than the luminaire body.

**LED LIGHT**

The LED light source slightly moved back into the luminaire body and the glass lens applied guarantee the best light distribution. The luminaire design allows lighting at 60° while preventing glare. The lighting element can come in a colour different than the luminaire body.

## Reel SP3

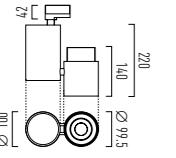

Reel SP3 is a line of spotlights designed by Fabian Baumann from the design studio Formfjord. Both models feature a distinctive design and enable directing light to a chosen place. The high quality integrated and energy-efficient LED light source provides lighting with natural-looking colours. Its optical lens enables shifting the lighting angle between 15° and 50°.

**APPLICATION:** Basic, complementary, and spot lighting. The luminaires will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

## Supra R ON

Supra R ON is an efficient spotlight dedicated for mounting on the ceiling or walls. The high quality integrated and energy-efficient LED light source provides natural-looking light. Its optical lens enables shifting the lighting angle between 15° and 50°. The luminaire enables creation of the user's own colour arrangements.

**APPLICATION:** Basic, complementary, and spot lighting. The luminaires will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

## Supra R SP3

Supra R SP3 is an efficient spotlight dedicated for mounting on a track. The high quality integrated and energy-efficient LED light source provides lighting with natural-looking colours. Its optical lens enables shifting the lighting angle between 15° and 50°. The luminaire enables creation of the user's own colour arrangements.

**APPLICATION:** Basic, complementary, and spot lighting. The luminaires will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

## Suspended

Luminaires designed to be suspended from the ceiling. The adjustment of the cords' length enables tailoring the suspension height to the user's individual needs.

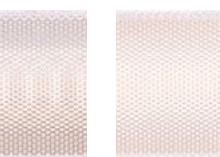

## Accent Z

Accent Z is a suspended luminaire offering natural light. Its compact size will ensure that it looks non-imposing in the interior, while the availability of various diffuser screens widens the scope of its use, making it very universal.

APPLICATION: General lighting and downward illumination of table tops, desks, and mirrors; also suitable for illuminating products or exhibits.

### DIFFUSER SCREENS

Luminaire available with three types of diffuser screen: SOFT, PR, oraz SPR. Please go to page 17 for more information.

SOFT

PR

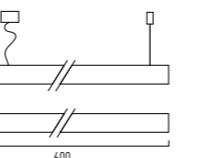

SPR

INDEX: 41.3101.Cx6 → 1 – SOFT / 2 – PR / 3 – SPR

THE LUMINOUS FLUX DATA DOES NOT ALLOW FOR A DIFFUSER SCREEN

## Moi Z

Complementing the whole line, our Moi Z luminaires offer focused illumination with the best quality LED light sources and the convenience of adjustable lighting angles. The various luminaire lengths: 30, 60, 90 and 120 cm facilitate creating interesting spatial arrangements. The luminaires come as standard with a 3 metre cord and without a power supply unit. Thanks to SNAP bases, the luminaires can be grouped and supplied by a single electrical service line.

APPLICATION: Focused lighting, diffused lighting for tables, display cases, hallways, restaurants, and offices.

REQUIRES APPLICATION OF THE  
SNAP BASE - P. 321

## Qua+ Z

Our Qua line has been part of our product range since the brand came into being. Over the 11 years, the luminaires have undergone a veritable evolution. We have adjusted this popular model to make it work with an integrated LED light source offering the best quality of light and a wide illumination angle. To cater for those who prefer halogen light, we have a version for a GU10 source. The availability of various luminaire heights enables creating interesting compositions, while - thanks to the SNAP system - you can build an arrangement with many lights using a single electrical service line.

APPLICATION: Focused lighting, diffused lighting for tables, display cases, hallways, restaurants, and offices.

REQUIRES APPLICATION OF THE  
SNAP BASE - P. 321

#### LED LIGHT

The LED light source slightly moved back into the luminaire body and the glass lens applied guarantee the best light distribution. The luminaire design allows lighting at 60° while preventing glare. The light source element can come in a colour different than the luminaire body.

#### HALOGEN LIGHT

To those who prefer halogen light, we offer a version for the GU10 bulbs. The ring holding the light source can come in a colour different than the luminaire body.

## Reel Z

Reel Z is a suspended luminaire designed by Fabian Baumann from the design studio Formfjord. Thanks to the best quality LED light source and the SPR diffuser screen, the luminaire features considerable output and provides natural, soft and evenly distributed illumination. The lightshade design will work perfectly in both modern interiors as well as those more classic ones.

**APPLICATION:** Focused lighting, diffused lighting for tables, display cases, hallways, restaurants, and offices.

### SPR DIFFUSER SCREEN

A new type of a prism diffuser screen, which absorbs only 10% of light while retaining the unified glare rate UGR≤19%. Its special structure makes single LED's invisible, which considerably reduces glare and improves the user's comfort of work and concentration.

REQUIRES APPLICATION OF THE  
SNAP BASE - P. 321

## Slim Line+ Z

Slim Line luminaires feature simple forms, small sizes, and upward and downward lighting directions, which enables simultaneous illumination of the table top and emphasising the ceiling by lighting up the interior.

APPLICATION: General lighting, downward illumination of table tops, desks, and mirrors; also suitable for illuminating products or exhibits.

THE LUMINOUS FLUX DATA DOES NOT ALLOW FOR A DIFFUSER SCREEN

# Telescope Z

Our line of suspended luminaires named Telescope is a play of various diameters of rings which makes the luminaire look light while letting it change its shape. It was designed by the designer Fabian Baumann from the Berlin based Formfjord studio. Its curious design, various ring arrangements, and the possibility of juxtaposing different colours make it possible to create original compositions, while the application of the SNAP system elements enables using a single power supply service line to feed a few luminaires.

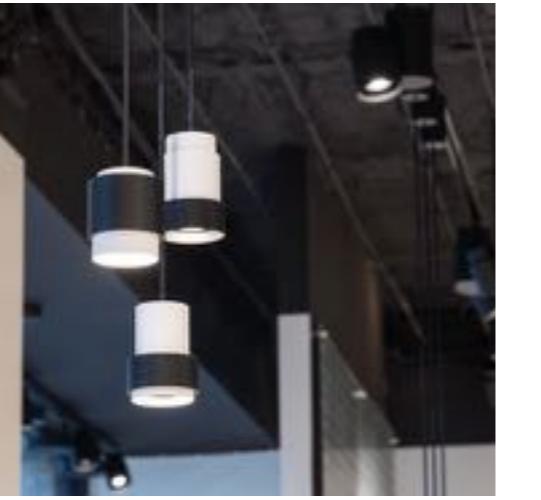

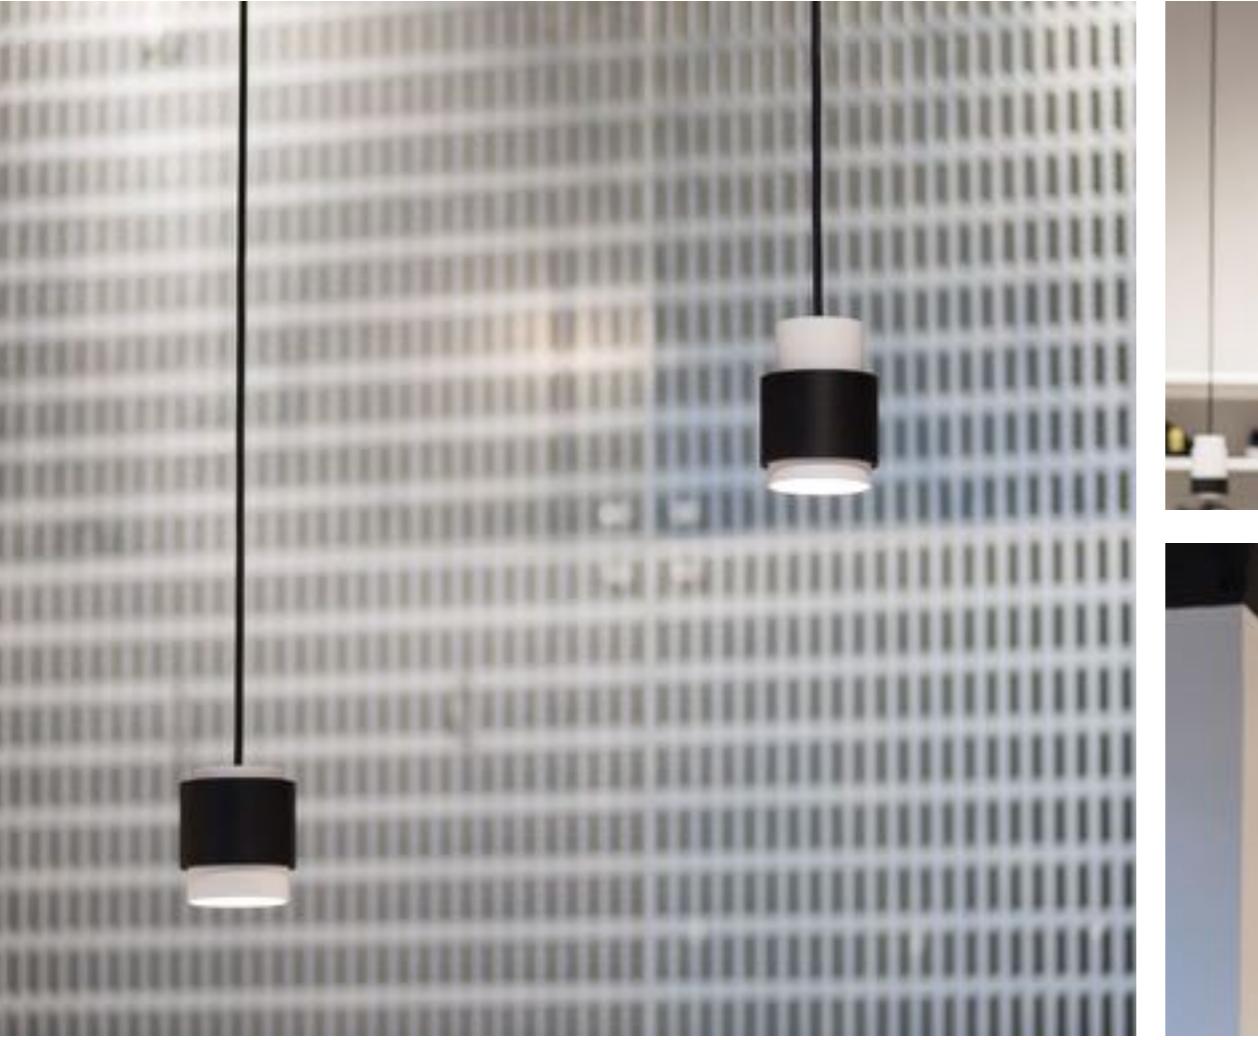

APPLICATION: Focused lighting, diffused lighting for tables, display cases, hallways, restaurants, and offices.

# Thiny Slim Z

Thiny Slim Z is a delicate suspended luminaire that will ensure even illumination in the kitchen, hallway or an office. Its simple and compact design makes it possible to use it also in small interiors.

APPLICATION: General lighting, downward illumination of table tops, desks, and mirrors; also suitable for illuminating products or exhibits.

# Thiny Snake Z

Thiny Snake Z is a solution for those who enjoy playing with the form. The connection system makes it possible to bend the luminaires in different directions to provide many possibilities of creating the interior's individual character, thanks to which the luminaire itself becomes an interesting architectural feature. The modules can be connected and diversified in terms of colour.

APPLICATION: General lighting, downward illumination of table tops, desks, and mirrors; also suitable for illuminating products or exhibits.

# Freestanding

Freestanding luminaires are an important element of modern interiors' décor and at the same time a perfect decorative feature for every residential space. They enable extra illumination of any chosen place or spot in the interior.

# Ambiente

The freestanding luminaire from the Ambiente line was created as a result of cooperation between the CHORS brand and Piotr Kalinowski (Modelista). It draws attention as a beautiful decoration of the interior and could easily replace a painting or sculpture while providing delicate, pleasant and very atmospheric light. It will be a perfect complement to a bedroom, living room, or hallway.

**APPLICATION:** Basic, complementary, and spot lighting. It will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

# Backlight / Backlight+

Freestanding luminaire providing indirect light. The "plus" version of the luminaire complements it by adding accent lighting with adjustable lighting direction and angle.

APPLICATION: Basic, complementary, and spot lighting. It will work perfectly in the sitting room, bedroom, or entrance hall.

## ADJUSTABLE LIGHTING ANGLE

The light's design makes it possible to set the lighting angle in the range of 8° to 40°. The glass lens, placed in a special ring, can be turned, which enables framing particular objects. The turning action is smooth while the framing adjustment resembles setting camera lens sharpness. For more information on the lenses please go to page 16.

# Dogirami

Freestanding luminaire designed for CHORS by Piotr Kalinowski (Modellista). Its light design, colourful lead, amusing shape, and the interesting lighting effect it produces make the DOGIRAMI line a unique element of the interior. The luminaire is available in two colours and four sizes: **S**, **M**, **L** i **XL**.

APPLICATION: Decorative table illumination.

# Flask T

Our Flask T luminaire features a subtle design and a lens enabling adjustable lighting angle in the range between 8° and 40°. It will work perfectly as a bedside light or extra illumination for a workstation tabletop.

**APPLICATION:** Accent lighting with adjustable lighting direction and angle. It will work perfectly in hotels, but is also suitable for illuminating offices or residential spaces.

## ADJUSTABLE LIGHTING ANGLE

The light's design makes it possible to set the lighting angle in the range of 8° to 40°. The glass lens, placed in a special ring, can be turned, which enables framing particular objects. The turning action is smooth while the framing adjustment resembles setting camera lens sharpness. For more information on the lenses please go to page 16.

# Reel

The freestanding version of a luminaire from the Reel line was designed by Fabian Baumann from the Formfjord design studio. Its remarkable design, the soft curve and interesting lightshade give it a unique, attention-grabbing look. The high quality integrated LED light source, considerable flexibility in directing light, and the glass lens making it possible to adjust the lighting angle make the luminaire highly versatile.

**APPLICATION:** Basic, complementary, and spot lighting. It will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

## Reel T

The table top version of a luminaire from the Reel T line was designed by Fabian Baumann from the Berlin based design studio Formfjord. The high quality integrated LED light source, considerable flexibility in directing light and the glass lens making it possible to adjust the light angle make the luminaire perfect for lighting a place of work.

**APPLICATION:** Basic, complementary, and spot lighting. It will work perfectly at establishments such as clubs, galleries, and hotels, but also as lighting for the office and home.

## System lighting

Lighting systems which offer a possibility of composing luminaires with modular elements to cater for the user's individual needs.

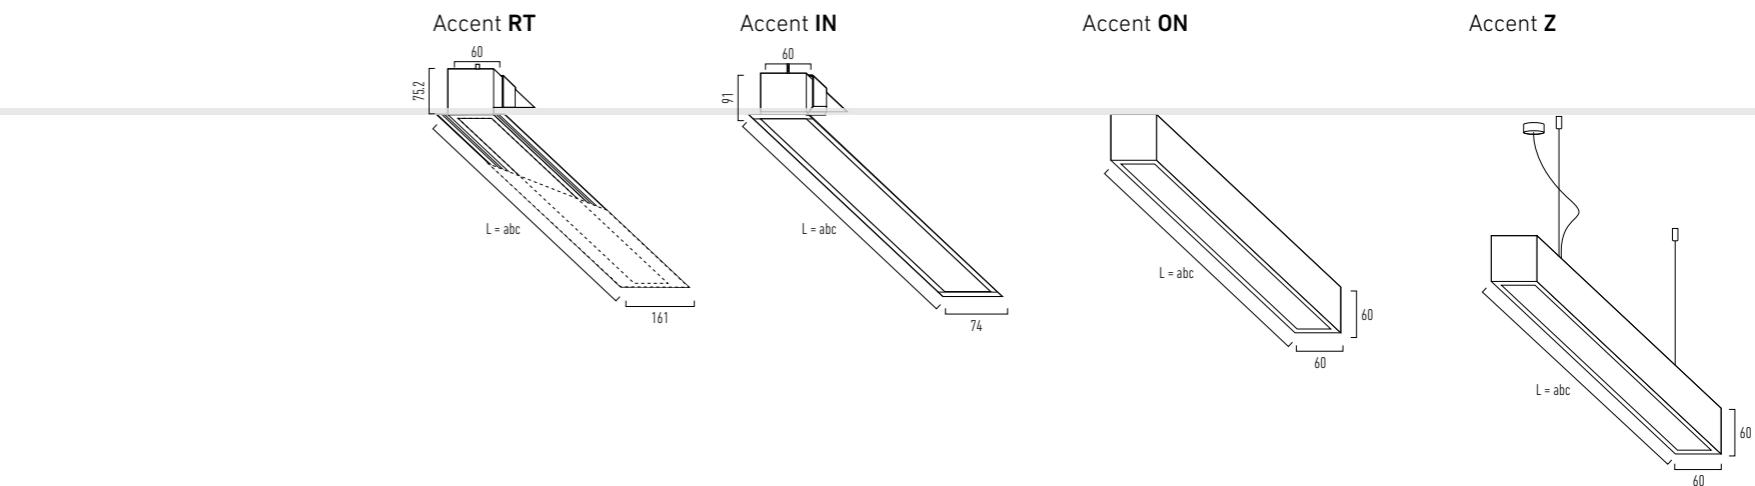

# Accent System

The system solutions allow combining various types of lighting. A juxtaposition of subtle diffused light with a focused beam enables creating a unique and aesthetically pleasing interior. Accent System does not only mean subtle design but also a possibility of creating exceptional lighting shapes.

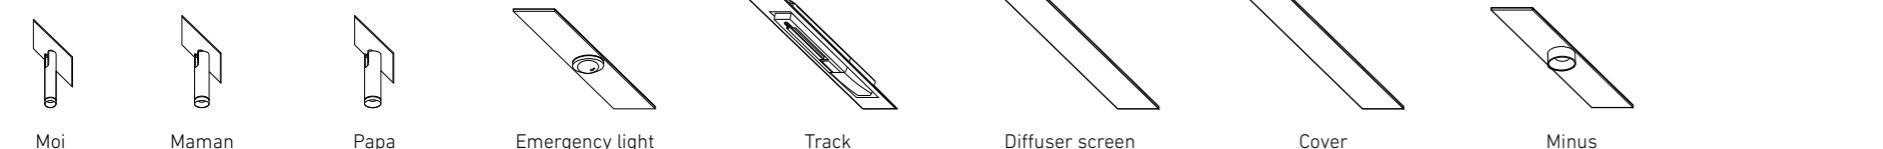

APPLICATION: A system of luminaires designed for residential interiors, office spaces, restaurants, and retail outlets.

# Slim System

The system solutions allow combining various types of lighting. A juxtaposition of subtle diffused light with a focused beam enables creating a unique and aesthetically pleasing interior. Slim System does not only mean subtle design but also a possibility of creating exceptional lighting shapes.

APPLICATION: A system of luminaires designed for residential interiors, office spaces, restaurants, and retail outlets.

# Accessories

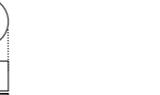

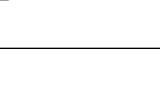

Additional elements enabling the operation, installation, or alteration of the illumination effect. Power supply units, tracks, installation bases, and diffuser screens.

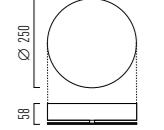

# Snap System

SNAP is a line of elements thanks to which it's possible to install a few suspended luminaires using a single power supply service line. The ceiling mounted bases were designed in a way that allows feeding power supply to as many as 9 luminaires, depending on the model chosen. The cord hangers allow creation of any cord arrangements both on ceiling and wall surfaces.

#### BASE

Thanks to SNAP bases, you can create your own arrangements by suspending one light on a single base or up to 8 lights - in the case of luminaires for traditional light sources, and in the case of LED - up to as many as 9 luminaires fed from a single base.

#### HOLDER

Cord holders will facilitate planning the arrangement of cords on the ceiling or wall. The easy installation and adjustment will make it possible to connect the lights with the base in a trouble-free manner and ensuring an aesthetically pleasing result.

# Tracks

The tracks in our offer, made by Unipro, are a particularly interesting solution for places which require frequent changes to illumination arrangements, such as stores, galleries, and museums. Moreover, they can perform well in private homes, where one may want to feed power supply from a single power supply service line to a few individually arranged lights. A number of accessories enable arranging tracks with one another in a manner catering for the user's every need. Luminaires are easily connected and disconnected from a track, and the three currents applied enable arranging luminaires so that they can switch on independently, in three groups. For the TRAIC version, a three-current track, one that allows configuration of three independent circuits, should be used. For the DALI version, we use tracks equipped with a DALI controller. The DALI track provides one-current operation. The number of circuits is obtained through digital control - addressing the lights and combining them in scenes.

UNIPRO TRACKS

# Power Supply Units

Lights which feature 230V 50Hz, as specified in their descriptions, have a built-in power supply unit and the description provided below does not apply to them. Wherever 250, 350, 500 or 700 mA power supply is mentioned, an appropriate power supply device must be selected.

Despite the development in the area of various power supply technologies, the version featuring the DC current stabilisation expressed in milliamperes still delivers the best efficiency while reducing pulsation (flicker) resulting in a slight strobe effect. You can see it by quickly moving your hand. Smooth movement means that there is no pulsation (flicker) effect, while abrupt movement is a signal that it is occurring.

Another advantage of applying power supply units is the possibility of choosing the TRIAC technology (lights are dimmed in an analogue manner, as is the case with traditional or halogen bulbs) or DALI (digitally controlled and dimmed lights) based dimming option.

LED's only seem to use a safe low voltage. Current stabilisation results in variable voltage. When choosing a power supply solution, you must remember two aspects. The first is that the maximum safe voltage for direct current is 60 V. For 250 mA current-powered diodes, the maximum LED output is 15 W, for 350 mA - it's 21 W, and for 700 mA - 42 W. The other aspect is the minimum operation time of a power supply unit. An underloaded or overloaded power supply unit can cause very visible strobe effect and power grid interference.

\*Transformers for halogen luminaires upon enquiry.

## Power supply unit connection scheme

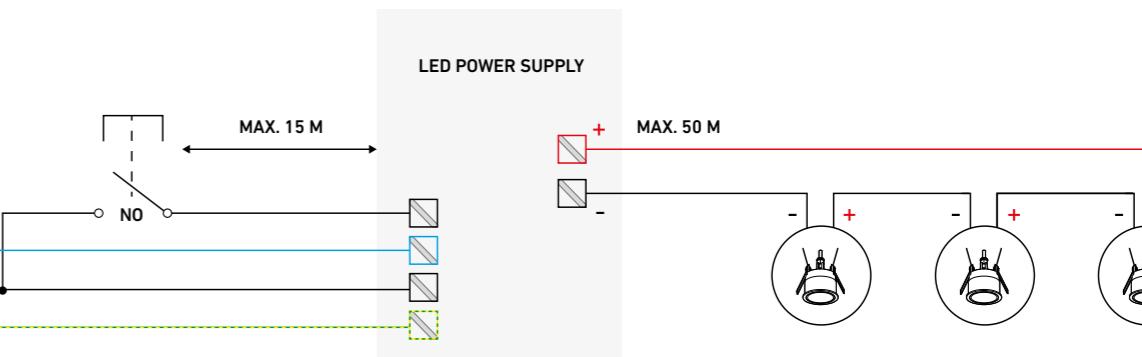

When connecting a single light source, you must remember about bi-polarity: positive to the positive, and negative to the negative.

If you connect a few lights to a single power supply unit, you must remember that stabilised power supply units require serial connection.
