**Materials - Bottom Cover**

Information Provided By Kevin Orthopedic Institute

---

**Protex**

Extension stiffening bottom cover

**FEATURES:**
- Stiffens floppiness with extensions and top covers
- Durable
- Anti-odor
- Anti-bacteria
- Thin
- Water resistant
- Non-animal product

**CLINICAL INDICATIONS:**
- Dress devices
- Sedentary to active patients

Protex is a thin 0.75mm, synthetic leather-type bottom cover material that sits on the inferior surface of the orthotic, covering the inferior surface to a desired length: mets, sulcus or toes. It is commonly selected for orthotics that need stiffer extensions and higher durability. It is resistant to bacteria and odor. As a bottom covering, Protex covers any modifications or additional materials requested.
