Metatarsal Punch

Metatarsal head punch out of Myolite extension material

FUNCTION:
- Accommodates and offloads metatarsal heads without additional forefoot bulk

CLINICAL INDICATIONS:
- Bony or soft-tissue metatarsal head prominence
- Plantar corn, callus or wart
- Hyperkeratosis
- Dropped metatarsal head
- Ulcer

A metatarsal punch is a circular aperture made in a Myolite forefoot padding inferior to the target metatarsal head. The aperture is made all the way through the Myolite’s thickness.

CLINICAL PEARL
Multiple metatarsal heads can be selected.
