

These few tips will ensure you get the best results. The quality of your images is the most important aspect and can take your finished design from just 'good' to **AMAZING!!!**

No.1 Avoid deep shadows and bright highlights. Take the photograph on a cloudy day or in shade - the softer light reduces contrast in your image.

No.2 Don't get too close. Or too far away. We cannot retouch back in ears, tops of heads or ends of noses. Too small and the subject will lack detail and sharpness.

No.3 Avoid things like grass, twigs, blankets, in front of the subject.

No.4 Make sure your image is sharp, especially around the eyes.

No.5 Some perfect poses. Taking a photograph of your subject at their eye level is a great angle. And if they look at you, even better!
