TACTICAL SPEAKER MICROPHONE

The Safariland TSM is a military-grade speaker microphone designed explicitly with dual functionality. Able to withstand the tortures related to tactical operations while providing easy-to-use all-day reliability for patrol duties. The TSM provides clear transmit and receive audio via the state-of-the-art speaker microphone while simultaneously providing the ability to plug in a tactical headset, thus converting the TSM into a tactical push to talk. Once a headset is connected to the TSM, the external microphones and speaker will be deactivated, allowing a stealthier approach than other speaker microphones. This feature eliminates any interference or feedback as operators stack up or move within proximity of one another. Comprised of some of the most durable materials available, the TSM is engineered to withstand heavy abuse in the worst environments. After an operation, disconnect the headset, and the TSM will begin producing audio once again, allowing clear transmissions without the need to continue wearing the helmet or the headset. The TSM is the most versatile speaker microphone ever developed.

TSM
MODEL

11901MA | ©2022 Safariland, LLC.

FEATURES & BENEFITS_

- NATO TJ-101 Connector to integrate with MOST tactical headsets.
- Multipurpose. Can be used for patrol or tactical applications.
- IP-67 Water durability
- Ergonomically designed to be used with or without gloves
- 2" tactile PTT button for quick locating and transmitting
