Honeywell Industrial Safety Training

Fall Protection Inspection Service Solutions

Let Us Do the Dirty Work!

Honeywell provides fall protection equipment inspection services per OSHA's mandatory pre-use inspection and ANSI's semi-annual and annual recommendations. Through the Honeywell Safety Training division, you'll gain access to qualified experts that can conduct the inspection on-site at your location or you can send your equipment to a Honeywell location for inspection.

Let us help you find the best solution for your next mandatory fall protection equipment inspection service:

Fall Protection Inspection Service Options:

Select Honeywell for your next mandatory equipment inspection and let us give you peace of mind that you are meeting regulatory compliance, reducing your company's liability and costs, as well as saving valuable time for your safety manager.

Send it in

Partner up with your local distributor to get pricing and a Honeywell RGA number, then send your fall protection equipment to the Honeywell location in Franklin, PA for inspection. Pricing is per piece and includes savings as you increase equipment quantity.

On-site at your location

When larger quantities of equipment inspection are required (up to 80 pieces per day), a Honeywell qualified expert can conduct the inspection on-site at your location. Call or email to request a quote for this option.

Save on combination promotions

If you already have a date set with Honeywell for an on-site training course, or know that you will be committing to a future on-site date, consider grouping an inspection service and save. Call or email for an inspection service combo promotion.

After successful completion of a Honeywell equipment inspection, you will receive a full report, and any equipment that failed the inspection will be red-tagged and marked accordingly.

Train your employee as a competent person

If you want your company to be responsible for the required inspections, you can send one or two people to a 16-hour Honeywell Competent Person class offered throughout the year. Courses are available in a variety of locations in the US and Canada.
