2" LIFT KIT HONDA TRX 300 FOURTRAX (93-00)

01

02

Item	Part No.	Description	Torque	Qty.
------	----------	-------------	--------	------

### LIFT COMPONENTS

Those items are shown on the first page.

01	202-01	Front Lift Bracket		2
02	202-02	Rear Lift Bracket		1

### FRONT HARDWARE

Those items are included with each kit to install the front lift components.

03	A-1008	M10 Flat Washer		4
04	A-1103	5/16" x 1.250" OD. Flat Fender Washer		2
05	A-1507	M8-1.25 Flange Lock Nut	18.75 ft-lbs	2
06	A-1509	M10-1.50 Flange Lock Nut	36 to 38 ft-lbs	4
07	A-2807	M8-1.25 x 25mm Hex Flange Bolt	18.75 ft-lbs	2
08	A-3019	M10-1.50 x 55mm Hex Flange Bolt	36 to 38 ft-lbs	4
09	B-5218	12mm ID. x 11/16" OD. x 1-1/8" Lg. Spacer		2

### REAR HARDWARE

Those items are included with each kit to install the rear lift components.

10	A-1508-25	M10-1.25 Lock Nut	38 to 40 ft-lbs	1
06	A-1509	M10-1.50 Flange Lock Nut	36 to 38 ft-lbs	1
11	A-3006-25	M10-1.25 x 25mm Hex Bolt	38 to 40 ft-lbs	1
08	A-3019	M10-1.50 x 55mm Hex Flange Bolt	36 to 38 ft-lbs	1
12	B-5215	12mm ID. x 11/16" OD. x 15/16" Lg. Spacer		1

# PLEASE READ AND UNDERSTAND BEFORE THE INSTALLATION

## CUSTOMER AND/OR END USER:

---

This product is designed for use on ATVs and/or UTVs to increase ground clearance and fender clearance. Purchasers should be aware that use of this product may increase the frequency of required maintenance, part wear...

Using a lift kit will raise the center of gravity on your ATV and/or UTV, increasing risk of roll-over, injury and death on ALL types of terrain. It's YOUR RESPONSIBILITY to always inform other operators and passengers of this vehicle about the added risks.

Our products are designed to best fit user's ATV/UTV under stock conditions. Adding, modifying, or fabricating any OEM or aftermarket parts will void warranty. PERFEX Industries products could interfere with other aftermarket accessories. If the user has aftermarket products on machine, please contact PERFEX Industries to verify that they will work together.

Adding aftermarket suspension components and/or more aggressive tires can cause breakage of other OEM driveline components such as differentials, axles or drive shafts.

We ALWAYS recommend that wider tires and/or wheel spacers be used to achieve a wider stance and to improve stability of the ATV and/or UTV. Riders should be advised that the handling characteristics of a taller ATV and/or UTV are different and require extra care when riding, particularly on side hills or off-camber situations. If you further raise the center of gravity by adding taller tires, heavy loads to racks or seats, or by any other means, the ATV and/or UTV must be operated with even more care, at slower speeds and on relatively flat ground. All turns should be done at a slow speed, even on level ground.

Operation of an ATV and/or UTV with or without modified suspension components, while or shortly after consuming alcohol or drugs, subjects the rider to the risk of serious bodily harm or possible death. This risk is compounded if the rider does not wear an approved helmet and other safety gear.

PERFEX Industries urges that all approved safety gear be worn when riding an ATV and/or UTV as a driver or passenger.

By purchasing and installing PERFEX Industries products, user agrees that should damages occur, PERFEX Industries will not be held responsible for loss of time, use, labor fees, replacement parts, or freight charges. WE (PERFEX Industries) will not be held responsible for any direct, indirect, incidental, special, or consequential damages that result from any product purchased from PERFEX Industries.

**PLEASE TAKE NOTE: The total liability of seller to user for all damages, losses, and causes of action, will never exceed the total purchase price paid for the product that gives rise to the claim.**

## DEALER AND/OR OTHER INSTALLERS:

---

You are responsible for informing your customer and end user of the information contained above and the increased potential hazards of operating an ATV and/or UTV equipped with modified suspension components.

If you install any suspension modifying components, it is your responsibility to also install a warning label prominently in view of the driver and in prominent view of the driver and passenger on UTVs and multi-passenger ATVs.

They should also be instructed to notify anyone operating the vehicle, as well as any passengers, that said vehicle is modified.

As discussed above, it is critically important that they be instructed in the need for slower speed operation, regardless of terrain, after this lift kit is installed.

# FRONT INSTALLATION INSTRUCTIONS

## PREPARATION

- Remove the front rack.
- Using a jack under center of front end, lift until the front wheels leave the ground.
- Remove the wheels.
- Remove the front fenders.
- Unbolt the CDI support bar.
- Remove the plastics fasteners.
- Disconnect the top of the shocks from the frame shock mount.

## INSTALLATION

1. Insert the front bracket in place on the frame shock mount.
2. Secure the middle of the bracket through the hole where the plastic fastener was. Use M8-1.25 x 25mm bolt, 5/16" fender washer and M8-1.25 lock nut.
3. Install the front bracket to the frame shock mount. Use M10-1.50 x 55mm bolt, 1-1/8" spacer and M10-1.50 lock nut.
4. Connect the top of the shock to the bracket. Use M10-1.50 x 55mm bolt, M10 washers and M10-1.50 lock nut. Put one washer on each side of the shock eyelet.
5. Tight all the hardware appropriately at this point.
6. Repeat the same steps for the opposite side.
7. Put the wheels back on the vehicle when the installation is finished. Torque all lugs to factory specification.

# REAR INSTALLATION INSTRUCTIONS

## PREPARATION

1. Using a jack under center of the rear bottom engine (don't lift the ATV by the swing arm), lift until the rear wheels leave the ground.
2. Place another jack under the swing arm axle. It will be easier to install the lift kit with a jack under the swing arm.
3. Remove the shocks. Save factory hardware.

## INSTALLATION

1. With a grinder, remove about 1/8" on each side of the bushing on the bottom of the shock. The bottom of the shock needs to be 1/4" smaller.
2. Remove the factory M10-1.25 x 15mm bolt, just under the bottom of the shock. Replace this bolt by the M10-1.25 x 25mm bolt provided with the kit. Tight this bolt.
3. Insert the rear bracket in place on the shock mount. The M10-1.25 x 25mm bolt need to be trough the center middle hole of the bracket.
4. Secure the middle of the bracket to the M10-1.25 x 25mm bolt. Use the M10-1.25 lock nut. Tight this nut.
5. Install the rear bracket to the shock mount. Use factory hardware with 15/16" spacer.
6. Reconnect the top of the shock to the frame. Use factory hardware.
7. Connect the bottom of the shock to the bracket. Use M10-1.50 x 55mm bolt and M10-1.50 lock nut.
8. Tight all the remaining hardware appropriately at this point.
