

Pyrostrip 500F and Pyrostrip 500F60, a higher grade graphite, are extremely effective in a wide variety of applications, including door perimeters, glazing in steel and timber partitions, air transfer grilles, aviation bulkheads and linear gap seals.

In a situation where fire arises, the intumescent expands to many times its original volume and develops a positive pressure when restricted by two substrates. Because of its chemical composition, it also has a very high melting point when subjected to heat rise.

Pyrostrip 500F/Pyrostrip 500F60

Coiled Graphite

Features

- Proven activation temperature for 30 and 60 minute fire resistance
- Water and chemical resistant
- Option for intumescent to be encapsulated in slim profile pvc sleeve
- Available with self-adhesive backing if required

Standard Sizes

Widths: 10mm, 15mm, 20mm, 25mm, 30mm, 35mm, 40mm, 50mm, 60mm

Thickness: 1.2mm, 1.5mm, 2mm, 2.5mm, 3mm

Lengths: 10m, 25m, 100m coils

Non-standard sizes are available on request
